# Letters to the RAINBOW

## Filling with Tapes

Editor:

In the March 1988 issue of THE RAINBOW in the Utilities section of Novices Niche, I read about creating data files for a 16K disk system (Page 74). The article was written by Raymond Doss. Mr. Doss stated his program can be modified for tape systems. What do I have to change to get this file system working with tapes?

Charles Crutchfield

5649 W. Virginia Avenue  
Phoenix, AZ 85035

First, since you are planning to use the routine for tape, remove the request for a filename extension from Line 100. Now change the device number, #1, to #1 in lines 100, 110, 120, 140, 150 and 180. Finally change EOF(1) in Line 160 to EOF(-1).

## Kudos to Eversoft, Ltd.

Editor:

I'm writing to tell you about the heart-warming treatment I received from Eversoft of Arlington, Washington. I was looking for two software programs, and I wrote to several of THE RAINBOW's advertisers. I received a letter from Eversoft stating they did not have the programs. A short time later I received another letter from Eversoft directing me to an ad in the October issue of THE RAINBOW for a similar program, but from a different company. I thought this was a very caring thing to do. Hurrah for people like those at Eversoft.

L. Grybe

St. Petersburg, Florida

## Looking for Flippies

Editor:

I commend THE RAINBOW for a great CoCoFest in Atlanta. The accommodations and sponsors were outstanding. The seminars were very informative and I learned about the programs I am currently using and even more about structuring my own. With the help of Three C's Projects I was able to eliminate a glitch in my backup copy of their software, and I am now on to conquering other worlds.

I have been unable to locate DSDD diskettes for my FD-501 drive. The disks I purchased would not format — I received the infamous 1/0 Error. I returned them and went to Radio Shack where I saw the DSDD 40-track disks, but these did not have twin

notches or alignment holes. I bought a few and notched one, but still could not format. Where can I find true double-sided disks?

Once again, thank you for your CoCoFest. It brought a new era of programming into my home. Keep up the good work!

Roger Rance

4700 Brossy Circle #98  
Charleston, SC 29418

We are glad to hear you enjoyed the CoCoFest in Atlanta. However, while we attended the show, it was sponsored by CoCo Pro<sup>1</sup>, a RAINBOW advertiser. We're sure they'll be happy, too.

Standard DSDD disks do not have the necessary second write-protect and indexing hole. The timing hole is required for formatting a new disk. Several wholesale disk companies offer these disks at special request, but you may find the higher price makes it impractical.

## A Powerful Caret

Editor:

I've just purchased a CoCo 3 and a subscription to THE RAINBOW. I have noticed in some of your programs that the ^ is used. Is there another key on the CoCo 3 that replaces it?

Billy Batton

Winter Haven, Florida

The ^ symbol is called a caret. It is used by computers to denote a variable or number raised to a power. For example,  $x^2$  means "square the value stored in Variable X." The CoCo uses an up-arrow symbol to denote the caret, but printers accurately print the actual character. To generate a caret, simply press the up arrow key.

## The Trouble with Home Publisher . . .

Editor:

I am having a problem with Tandy's Home Publisher. What appears on the screen is not what I get on the printer. If I select 80 characters per line, I get 60. If I select 60, I get 40. No matter what point size I choose, the printer gives me the next larger size. I have written to Tandy and received a corrected driver disk, but I'm getting the same results. I wrote to Tandy again and was informed that there is no problem with the program. I have visited my local Radio Shack stores without results.

Since I can't seem to get support from Tandy, I am turning to THE RAINBOW and the CoCo Community for help. If anyone has any advice, I would greatly appreciate it. My equipment consists of a t28K CoCo 3, FD-502 drive and DMP 132 printer with the Tandy High Resolution Joystick Interface and Metric Industries Model 101 serial-to-parallel interface.

Douglas Bacon  
108 Maromas Road  
Middletown, CT 06457

#### Editor:

I have a Color Computer 3 with one disk drive, a B/W television and a DMP-107 printer. I've purchased several programs and find only one of them difficult to understand and use. The culprit is *Home Publisher*. My problems are numerous and I'm getting tired of not being able to adequately use the program.

First of all, the program only prints in Tandy mode, which is OK until I want to use another program with the printer. Also, I can never get the printer to print one column of print (newsletter style) as opposed to two or three columns the first time despite following all start up procedures. I must select three columns, then two columns, then it might print the one column. When entering information on the screen, the margins are not set as wide as the program's visual display shows. It's approximately 4½ inches from the left margin, which is extremely misleading. I've gotten used to having the boundaries displayed to know where to stop, but this slows the input process as well as my creative juices. The print is very large, which is not Tandy mode print. Can you offer assistance in solving my problems with *Home Publisher*?

My second major problem is with the

basic use of the computer and the printer. I am not a programmer, but would like to know how to just type something on the computer and have it print without having to type line numbers. Is a definitive program necessary to accomplish this? If so, what is it and how much does it cost?

So far I'm not finding the CoCo 3 too terribly user-friendly!

Sanceria Thomas

University City, MO 63130

*Printing text with your computer, such as a letter or memo, requires a word processor or text editor. Many advertisers carry such products. See the ads for Microcom, Danosoft, Owl-Ware and Cer Comp. In the meantime, every computer has a learning curve. Hang in there and you'll do fine.*

#### Exploring a New World

##### Editor:

I should be tinkering with my naive attempts at windows, but instead, here I am writing another letter to the Editor.

A few months ago I wrote to gripe about what's happening to our magazine. I stand firm on my complaint. I don't like the trend I'm seeing. There must be a way to reverse this backward evolution. (And I hate the saddle-stitch format!) However, this time I'm writing in defense of THE RAINBOW and the CoCo Community as a whole. (And, by the way, to thank you for giving us back our protective wrapper. It's a step in the right direction.)

The letter from Jim Price in your September issue has been gnawing on me and it demands a response. He would have us believe that the evil forces of "OS-9 and machine language gibberish" have lately invaded, and are taking over, THE RAINBOW. If his feelings are, as he suggests, shared by other CoCo users, then we are in big trouble.

I believe Mr. Price should take a close look at the very issue in which his letter appears. Of course, he probably won't buy the issue, since those horrible words "Assembly Language" appear right on the front cover.

The theme of the issue is education and Lonnie sums it up rather nicely in "Print #2." Isn't the CoCo, among other things, a tool for learning? Of course it is! Isn't THE RAINBOW our prime support for that learning? Of course it is! Is Mr. Price's stagnant outlook infecting our community? I certainly hope not!

I've been learning with the CoCo for several years and have found the more I learn the more useful my CoCo becomes. I never would have tried my hand at assem-

bly language had it not been for Bill Barden's ravings in THE RAINBOW. I've learned to work with it and now know how useful it can be. I've gained this knowledge through articles devoted to such "gibberish" published in THE RAINBOW.

Until last Christmas, I was frustrated because THE RAINBOW was becoming primarily a CoCo 3 magazine with little "good usable material" for my CoCo 2. Unlike Mr. Price, though, I accepted reality. THE RAINBOW was simply growing with the CoCo and I was fast becoming part of a dwindling minority.

I was also intimidated by OS-9. It was intriguing, but seemed too complex and hostile. I didn't have it and had no plans to buy it. I'd always read the articles, though, trying to learn why those "weirdos" were so attached to it.

Last Christmas I finally gave in and bought a CoCo 3. A month later I dared and bought OS-9. Now I'm just as lost and confused as I was several years ago when I powered up my first 4K "Gray box." And I'm just as excited. OS-9 Level 11 is mind-boggling, but its power is even more mind-boggling. I'm learning and, even as a stumbling novice, I've stunned a couple of friends by casually making my "cheap little CoCo" do things their high-dollar PCs can't. Why? Because articles devoted to such "gibberish" are published in THE RAINBOW!

Will I shun BASIC just because I'm trying to learn something new? No! I've used BASIC for years. It's an old friend and I'll continue using it. (I did, however, purchase Burke & Burke's RSB. Running BASIC while exploring OS-9 has great potential.)

Do I expect THE RAINBOW to devote itself to OS-9 just because it's what I'm trying to learn? Not on your tintype! I'll type in the one-liners and the listings in "Novices Niche" or anything else. I'll read "Turn of the Screw" since I'm an engineer and a hardware hacker. I'll read the consultations and the product reviews. I'll digest every word cover-to-cover and grumble because the covers are too close together these days. I may or may not find some "good usable material". The odds are I'll learn, or re-learn, something before I'm done and will enjoy the reading.

The fact that I'll also type in the OS-9 listings does not mean I'm some kind of freak, as Mr. Price suggests. It simply means I'm exploring a new world. It's a very impressive new world and, though I'll consider myself a novice for a long time to come, I already understand why those "weirdos" have been pushing it for so long. I also understand why OS-9 and machine

#### For the Love of CoCo

Cecil Houk, owner of Rulaford Research, sent us this picture of the license plate on his car. We've seen the plate game played countless ways, but few are as simple and meaningful as this. Hmmm... we wonder if anyone has put 6809#1 on their plates?

Continued on Page 93

## CoCo Graphics Designer Plus

Create beautiful greeting cards, signs and banners for holidays, birthdays and other occasions. Features easy-to-use point and click interface and user-friendly operation. Picture, font and Border collections included. **Only \$29.95** (Req CoCo 2/3, disk drive, mouse or joystick, Printer: EPSON, GEMINI, Star, DMP, Panasonic KXP 1080/50/81/92, Cliché 8510, Okidata 92/93/182/183 & more)

**Picture Disk #2, #3, #4: \$14.95 each**  
**Font Disk A,B: \$14.95 each** **Border Disk #1: \$14.95**

## MUSIC

**COLOR MIDI INTERFACE:** Connect CoCo to MIDI world. Contains 1 MIDI Input & 4 MIDI outputs to hookup to 4 MIDI devices. Multipak or Y Cable NOT REQUIRED! Only **\$99**

**SYNTRAX 2.0:** Very sophisticated MIDI Seq. Ability to control multiple music synthesizers, rhythm machines or any other MIDI devices. Only **\$59**

**SYNLIB:** Multi-Instrument Librarian. Uses the MIDI port to save/dump patterns from almost every instrument. Only **\$49**

**Musica II:** Best Music Composition program for the CoCo 1,2 & 3. Disk Only **\$29.95**

**Lyra:** MIDI Based Music Composition program for CoCo 1,2 & 3. Only **\$49.95**

**The Lyra Companion (Book): \$9.95**

**Studio Works:** Superb Digital Audio Sampler. **\$39.95 w/ Cable: \$54.95**

## Color Schematic Designer Ver 2.0

The best Circuit Designer for the CoCo 3. Pull Down Menus, hi-resolution symbol sets, Keyboard / Mouse / Joystick (with proportional cursor speed system), lightning fast multiple UNOCs, Symbol Add / Modify / Rotate/Line/Box Draw, Hi-res Fonts, workspace of 640 x 1000 pixels, 3 layers, font styles (fancy, italic, block, etc). Supports DMP/ EPSON / GEMINI & compatible printers. Supports near laser quality printouts on almost all EPSON Compatible! Only **\$39.95**. CSO 1.1 / 1.2 owners can upgrade to version 2.0 by sending \$10 w/ proof of purchase. (See Review in September 1989 Rainbow)

## Label Designer

Print Labels with text and graphics; mail merge option; disk directory option; serial numbering option; easy to use graphics user interface. Only **\$29.95**

## ADOS

**EXTENDED ADOS 3:** Here it is! Highly acclaimed DOS from Spectrosystems with built-in Ramdisk, Point-and-Pick & much more. Only **\$39.95**

**Driver for Disto RTC: \$5** **28-pin Adapter: \$10**  
**Smartwatch RTC: \$34.95** **Drivers: \$10**

**ADOS 3: \$34.95**

**ADOS: \$27.95**

## Terminal & BBS Software

**Autoterm:** Modern Software for CoCo 1,2,3: **\$39.95**

**VTERM:** Terminal Software for CoCo 3 with VT Emulations, Xmodem, Ymodem, RAMDISK like Buffer, Conference mode, 35/40/80 track drive support. Only **\$39.95**

## CEBBS 2.1

The absolute best BBS for CoCo 3. Features XMOEM, Up/Download, menus, login, message base, clock/calendar, execution of external programs, full Sysop Control & remote system access. Even HYPER-IO Compatible. Only **\$49.95**. Min. Req. CoCo 3, 1 Drive & RS232

## From Colorware...

**Max 10: \$39.95** **Spelling Checker for Max 10: \$29.95**

**Max 10 Fonts (36 fonts): \$29.95**

**CoCo Max III: \$49.95**

**CoCo Max III Fonts (95 fonts): \$49.95**

**Max Edit (Font Editor): \$19.95**

**NX1000 Rainbow Driver / CGP 220 Driver: \$19.95**

**CoCo Max II: \$69.95** **CoCo Max I (Tape): \$59.95**

**MAXPATCH (Run Max 2 on CoCo 3): \$19.95**

# THE WORLD OF OS9

## Window Writer OS9

Powerful OS9 word processor with multi-tasking, pull down menus & more. Only **\$59**.

**Dynaspell:** 102,000 word spelling checker! Only **\$19.95**

## Start OS9

Excellent hands-on guide to OS9 Level II for beginners. Req. 512K, 2 drives & Monitor. Book/Disk **\$32.99**

## Goldberg Utilities

**Vol 1:** 15 Power-packed utilities such as sort, lost-file location, disk pack & more. **\$24.95**

**Vol 2:** New utilities for OS9 such as file compare, protection, enhanced delete/ move/ dir/ sort/ dump, strip and much more. Only **\$24.95**

## Multi-Edit

Create, edit Application Information files & icons from multivue. Only **\$24.95**

## OS9 RAMDISK

In-memory disk drive! A must for every OS9 user. Req. 512K. Disk Only **\$29.95**

## From Burke & Burke

**RSB v1.3:** The revolutionary program that allows you to use Basic from under OS9 Level II. **\$39.95**

**Wild & MV Version 2.1:** Use wildcards w/ OS9 & rearrange directory tree. Only **\$19.95**

**EZGen Version 1.6:** Powerful OS9 Bootfile editor. Change names, add/delete modules, patch bytes, etc. Only **\$19.95**

## From Alpha Software

**OS9 Level II BBS:** Best BBS for OS9. Comes with terminal program. Req. 512K & RS232 Pack. Only **\$29.95**

**Level II Tools:** 25 Utilities such as windowing, wildcards, tree, etc. **\$29.95**

**Disk Manager Tree:** Change, copy, view, create directories with ease. Req. 512K. **\$29.95**

**Warp One:** Level II Windowing Terminal. Req. 512K & RS232 Pack. **\$34.95**

**Zapper:** Patch disk errors. **\$19.95**

**Multi-menu:** Create own pop-down windows. Req. 512K & Multivue. **\$19.95**

**Presto Partner:** Notepad, calculator, calendar, phonebook, clock at your fingertips. Req. 512K. **\$29.95**

## Transfer Utilities

**GSC File Transfer:** Transfer files from MS-DOS, OS9, RS-DOS, and FLEX. Req. OS9 (Level II for Multivue Ver), 2 drives, SOISK/SOISK3. Standard Version: **\$44.95**; Multivue Version: **\$54.95**

**PC-Xfer Utilities:** Format/ transfer files to/from MSDOS to CoCo

under Level 1/2. Req. SDISK/SOISK 3. Only **\$44.95**

**SDISK3:** Standard drive replacement module allows use of 40/80 OS/OD drives. Requires OS9 Level II. **\$29.95**

**SDISK: \$29.95**

## From R3 Systems

**Screen Control Utility:** Gain control of text screen. Only **\$19.95**

**Menuing Utility:** Memory resident menuing system. Only **\$19.95**

**Point-and-Shoot File Selection: \$19.95**

## From Frank Hogg...

**Dynastar:** Popular OS9 word processor. Only **\$99.95**

**Dynastar + Dynaspell: \$119**

**Wiz: Terminal Prog. \$59.95**

## Sugar Software

**OS9 Calligrapher: \$24.95**

**Font Messenger: \$19.95**

**MICROCOM SOFTWARE** 1387 Brighton-Henrietta, Townline Rd., Rochester, NY 14623

# Keeping the Spirit

**W**hat is special about the CoCo Community? I think it is best exemplified by the word *ruarch*, a Hebrew word that means spirit and vigor. Even a decade after the first Color Computer was introduced, there is still new spirit and vigor in our community. This ongoing vitality is due to new programs for our CoCos, more powerful upgrades and also the new members of our Community.

Those who regularly read this space have seen examples of how the CoCo can change lives. To borrow from Ivory Soap, I claim that 99 and <sup>44</sup>/<sub>100</sub> percent of these changes have been improvements. How hath some of these changes been wrought? Let me share with you a letter I received a couple of months ago, and my response.

*Dear Louie,*

*I have just completed what will be my final article for THE RAINBOW. It has been my pleasure to contribute to your fine publication, the little newsletter that grew!*

*Computer Island is approaching the end of its run. Orders and inquiries are few and far between. We are winding down gracefully and with no regrets.*

*What an experience this has been. We have learned so much, met so many people and savored their differences as well as their similarities. In addition to all the practical things we learned, such as accounting, advertising, programming, off-set printing, state sales tax returns and non-reproducing graph paper, we also learned that opportunity still exists. A simple statement, "let's see if we can sell this program," can lead to Computer Island. We grew from the experience, as did our children.*

*Speaking of children, we have some news. Our oldest child, Adam, was married on October 28th. Can you believe the little guy who helped at RAINBOWfests and worked with us at home is now a college graduate and a married man? He's a big guy now! Our other RAINBOWfest helper, David, is a high school senior and Shari (the baby), an infant when Computer Island began, is in fourth grade. The years have certainly flown by, but they surely have been good years.*

*Thanks for all your help over these years. Having THE RAINBOW as an advertis-*

*ing vehicle was the key to Computer Island's success. Lots of companies have good products, but no way to let the public know about them. You provided us the means to get the message out to a targeted market. What could be better? We appreciate it so much.*

*Keep in touch and stay well. Regards to your family. Best of luck in all Falsoft endeavors.*

*Sincerely,*

*Steve and Cheryl Blyn*

Dear Steve and Cheryl,

I remember when I would call to discuss advertising or one of your new products and Cheryl would interrupt negotiations because Shari was crying for her bottle. I also remember when Adam "disappeared" at RAINBOWfest for a half an hour to look at games somewhere else. And that sales at the shows picked up considerably when Cheryl was present. She became the "boss of the booth."

But most of all I think the whole CoCo Community remembers the thousands of hours you have devoted to it down through the years with both Computer Island and also through Steve's magnificent columns! You have touched so many lives. We all owe you a debt of thanks.

Steve, I know with your successful career you have had little time to develop your line in the past years, but your columns have been excellent. And your contributions to this Community beyond comprehension. We will miss you and your entire family.

Best of luck, good wishes and fond thoughts from all of us.

— Lonnie Falk

...Just think of any word processing feature, chances are Word Power has it...packs a lot of features...excellent word processor..." Word Proc. Comparison-April 1989 Rainbow; Pg 26.

# Word Power 3.3

The Best Just Got Better!

"...friendly...amazing execution speed...much easier to use than VIP software & 2 other systems I've tried...very user friendly...highest among word-processors". Rainbow Oct 88 Rev.

## SPEED

Blazing Fast! Runs at **2 Mhz** and uses the standard text screens for lightning fast execu-

## MEMORY

Word Power 3.3 allows **72K** of workspace on a 128K CoCo and **460K** on a 512K CoCo. More memory than any other word processor. Period.

## DISPLAY

Choice of **40** or **80** columns with your choice of colors. Can be used with RGB/Composite/Mono-chrome Monitors and TV. Pull down menus, plain english prompts, on-screen underlining and page break display make

## EDITING

Powerful full-screen editor w/ word-wrap. 4-way cursor, scrolling; Line Positioning; Block Commands; Search, Replace; OOPs recall during delete, adjustable key-repeat, key-click, typeahead, Tabs, Word-Count and much more! . Built-in extensive **HELP** screen can be accessed anytime during edit.

## SPOOLER

Print and Edit documents at the same

## SORTING

Sort lists in a flash!

## GRAPHICS

Insert **graphics** in your documents! Allows you to import **PMode 3/4**, **HSCREEN** and **CoCo Max**

## CALCULATOR

Built-in 4 function calculator!

## 2 COLUMN PRINTING

Align your text in 2 columns with a few keystrokes!

## SPLIT-SCREEN EDITING

Freeze a portion of text and edit another. Its fantastic!

## SAVING / LOADING

Creates ASCII files that are compatible with other word-processors, terminal programs, etc. Allows directory point & select for easy loading/saving, **Automatic Backup**, file erase, free space display. **ARE YOU SURE?** prompts prevent accidental deletes. The **Auto-Save** feature automatically saves text to disk during user-defined intervals for peace of mind. Supports double-sided drives.

## MACROS

Playback up to 250 keystrokes with a single key! Automate multiple tasks with a single key! You'll love it!

## MAIL MERGE

Type a letter, follow it with a list of names & addresses and have Word Power print out personalized letters. Its that easy!

## SPELLING CHECKER

Word Power 3.3 include a **80,000** word spelling checker which finds and corrects mistakes in your text.

## PRINTING

Works with **all** printers that work with the CoCo. Allows options such as baud rates, spacing, page/print pause, partial print, page numbering/ placement, linefeeds, multi-line headers/footers, right justification and number of copies. The values of these options can be changed in the text by embedding Printer Option Codes. The **WHAT YOU SEE IS WHAT YOU GET** feature allows you to preview the text on the screen as it will appear on the printer. You can view margins, page breaks,

## PUNCTUATION CHECKER

This checker will proofread your text for punctuation errors such as capitalization, double-words, a/an usage, spaces and more. Its the perfect addition to any word-processor.

## DOCUMENTATION

Word Power 3.3 comes with a well-written instruction manual & reference card which makes writing with Word Power as easy as pie. Word Power 3.3 comes on an unprotected disk.

Only

**\$79.95**

**Upgrade Policy:** Word Power 3.2 owners can get Word Power 3.3 by sending original Word Power disk and \$15 to the address listed below.

**MICROCOM SOFTWARE**, 1387 Brighton-Henrietta, Townline Rd., Rochester, NY 14623

All Word Power 3.3 orders shipped by UPS 2nd Day Air at No Extra Charge in Continental US.

For Detailed Order Information, refer to Page 17 of our 6-page Ad series (Pgs 7-17).

To Place Credit Card Orders Call Toll Free **1-800-654-5244** (9am-8pm 7 days/week)

# DISK MASTER 3

Seven menu-driven  
utilities allowing  
you to take control  
of your disk system  
on a CoCo 3

by Mike Jorgenson

**D**isk Master 3 is a comprehensive system of utility modules for the Color Computer 3. The system consists of a boot program, a configuration program and seven utility programs that operate in a modular fashion. *Disk Master 3* allows you to edit disks, copy tagged files, sort disk directories and more.

I have taken considerable care to ensure uniformity and compatibility of *Disk Master 3* with most custom BASIC enhancement utilities such as *ADOS-3*. All of the utility programs have three common features: Pressing D allows you to change the working drive; pressing V lets you view a disk's directory and you can press Q to quit and return to the menu.

The *Disk Master 3* system uses PCLEARI for many of its routines. If PMODE graphics have been used prior to loading, the system will not operate—even though this system is both reliable and efficient, it should be used only on start-up. The high-speed mode (POKE65497,0) is used in various routines for data processing, but never during disk access.

Follow the system prompts carefully when changing disks, especially when working with your master. The system makes use of error-trapping routines, but some custom BASIC enhancement utilities sidestep these traps when a disk-access error occurs.

Before using *Disk Master 3* be sure to run CONFIG to establish your custom operating parameters, which have been pre-set for Disk BASIC. It is a good idea to make a backup copy of your system master disk immediately after creating the custom master. Now run BOOT when you want to use the system.

### The Configuration Program

This program allows you to set up the various operating parameters and/or helpful features used with this system. As a safety measure, *Disk Master 3* will not operate unless the master disk has been configured. The system can check this since CON-

FIG saves your custom configuration data in an unused portion of the directory track, Track 17. The features that can be pre-set are shown in Figure 1.

Once the system is configured, these operating features are always provided on start-up. Should you find it necessary to change a pre-set parameter, you will have to reconfigure the system master disk. However, disk verification and the default text-screen width can be alternately toggled from the utility loader program.

### The Loader Program

BOOT is the system loader for the utility modules. It can also be used to customize your BASIC DOS, depending on how it is configured. Pressing ESC clears the system from memory and exits to BASIC while restraining any customized features.

F1 is used to alternate between the 40- and 80-column text screen default. Pressing F2 toggles disk verification on or off as needed. Pressing ALT displays the disk directory on the default screen. The display includes extensions, granule allocations and any free space that remains.

### Edit Master 3

This module is used to scan or edit a disk by track and sector. When editing a disk, move the cursor to the character to be changed and enter the CHR\$ code for a new character. Then resave the sector to disk by pressing W when finished. Press ESC to abort the Edit mode.

Monochrome monitor display — disables colorburst  
Foreground/background colors — 32/40/80 column text  
Default text screen width — select 40/80 columns  
Read/write I/O verification — set verify on or off  
True lowercase in 32-column width — as 40/80 column text  
40-track drive operation — allows 78 granules per disk  
Drive step rate — for smoother drive operation  
Double-sided drives option — 0/2 and 1/3 configuration  
Select a printer baud rate — 6 options (600-9600)

Figure 1: *Disk Master 3* Configuration Parameters

When scanning a disk, the up and down arrow keys provide continuous scrolling. The Spacebar can be used to pause and resume the display. The left and right arrow keys cause the program to display the next sector of the track and then pause for an input command.

### List Master 3

This module is useful for reviewing an ASCII text or data file. The output can be

directed to the monitor/TV or printer. You can specify characters per line, lines per page, space between paragraphs and auto-page numbering as needed. You can also review or make a hardcopy of any BASIC program that is saved in ASCII format.

When making a hardcopy, pressing ENTER sets the output default as indicated. The printout is intended for standard or legal typewriter paper and printing pauses at the end of each page.

When reviewing a file onscreen, the Spacebar pauses and resumes the display. The F1 key is used to toggle between the user's pre-set screen-color selections and the inverse of those colors. Pressing F2 starts a file and sends the output to the printer. Use ESC to exit the File Review mode.

### Test Master 3

This module provides an extensive diagnostic drive test. As a safety precaution, you should always insert a blank, formatted disk into the working drive before proceeding with *Test Master 3*. This module performs the following tests:

Step the working drive in or out  
Step the head to a specified track  
Re-set the drive head to Track 0  
Toggle the drive motor on or off  
Check the drive indicator light and the write-protection routine  
Read and write verification test  
Check drive speed (RPM test)

Note that the read/write verification test will not work with any disk having data on its directory track. The disk must be blank.

### Track Master 3

This module allows you to make a 35- or 40-track backup to any combination of drives. The module copies five tracks on each pass and has an optional read/write-error bypass routine for problem disks. When the backup is completed, this

module will run again with the same configuration, if needed. A normal 35-track, non-verified, multi-drive backup takes approximately 90 seconds.

### Copy Master 3

This module is used to copy or super-copy files to any combination of drives. You can copy everything from one disk to another with the press of a key or copy one or more specified files with a Yes/No/All-

*Mike Jorgenson is an outdoorsman who likes to read and write fiction stories. He also enjoys music, sports, computer programming and working with electronic equipment. Mike can be contacted at 749 Tower Blvd., Lorain, OH 44052. (216) 282-9355. Please include an SASE when requesting a reply.*

The-Rest prompt. When making a single-drive copy, this utility handles files of up to 10 granules with just one swap.

Note: If you have ADOS-3 in memory or EPROM, using this module to replace existing disk files will distort the display screen.

### Kill Master 3

This is similar to *Copy Master 3*, except that a *Want to Reconsider?* prompt has been added before command execution as a safety measure.

### Sort Master 3

This module is used to sort a disk's directory alphabetically, by extension or by file type. This is quick, efficient and quite helpful when organizing a software collection. □

# HEART & SOUL

## UNRAVELLED SERIES

Breathe Life Into Your Color Computer. Gain complete control over your CoCo with these Pokes, Peek 'n Execs Books. The books will give you the power of Machine Language without leaving the security of Basic. Each book is a collection of 'inside' information with explanations and examples. Everyone from the novice to the professional will find these books a wealth of information.

### 500 Pokes Peeks 'n Execs \$16.95

500 commands such as Basic Program Autostart, Rompak Transfer to Tape, Commands/Keys Disables and much much more! For CoCo 1,2 & 3

### Supplement to 500 Pokes Peeks 'n Execs \$9.95

200 additional commands such as Rompak transfer to disk, double-sided drive support, 40/80 track drive support & much more! For CoCo 1,2,3. 500 Pokes, Peeks 'N Execs is a prerequisite.

### 300 Pokes Peeks 'n Execs for

**CoCo 3 \$19.95**

All new commands for the CoCo 3!!!

All 3 Pokes  
Books: \$39.95

For the Weekend Hacker to Professional Programmer! Complete, Commented Uninterrupted Memory Maps of the ROM. These Books Are A MUST!

**DISK BASIC UNRAVELLED \$19.95**

Includes source code for DOS 1.0/1.1 (2.0/2.1).

**EXTENDED COLOR BASIC UNRAVELLED \$39.95**

Includes source code for Color Basic and Extended Color Basic ROM.

**SUPER EXTENDED BASIC UNRAVELLED \$24.95**

Contains source code for Super Extended Color Basic (CoCo 3 Enhancements)

**All Three Unravalled Books \$59.95**

Both the Unravalled Series and Pokes  
Books: \$94.95 (Regular \$132.95)

## COCO LIBRARY

CoCo 3 Service Manual \$39.95

CoCo 2 Service Manual \$29.95

Multipak Service Manual \$19.95  
(specify 26-3024/3124)

Full Turn of the Screw - Disto 19.95

Assembly Language Programming \$18

Addendum For CoCo 3 \$12

Color Computer Disk Manual \$29.95

Start OS9 (Book & Disk) \$32.99

Inside OS9 Level II \$29.95

Complete Rainbow Guide to OS9 \$19.95

Complete Rainbow Guide (2 Disks) \$29.95

Rainbow Guide To OS9 Level II \$19.95

Rainbow Guide To Level II Disk \$19.95

## COCO 3 GAMES

(All Programs Require Min 128K Unless Specified)

Sinistar (Req. 512K): \$34.95

Those Oarn Marbles (Req. 512K): \$32

Warrior King: \$29.95

In Quest of the Star Lord: \$34.95

Hint Sheet: \$3.95

Quest for the Spirit Stone: \$18

Five Towers of Trafa-Zar: \$25

Kyum-Gai: \$29.95

Mine Rescue: \$24.95

Overlord: \$29

## Games for CoCo 1,2,3

(All Programs require Min. 32K CoCo unless specified)

Wizard's Castle \$19.95. Hi-res graphics adventure filled with tricks, traps & treasure. 64K Req.

Pinball Factory \$34.95. Design, build, edit & play the Classic game of pinball. 64K Req

Hall of the King 1, 2, 3 \$29.95 each

Hall of the King Trilogy: \$74.95

Kung Fu Dude: \$24.95

Dragon Blade \$19.95

Champion \$19.95

Paladin's Legacy \$24.95

Seventh Link: \$38

Caladrial 2: Weatherstone's End: \$54

Slots & Cards: \$39.95

White Fire of Eternity \$19.95

Treasury Pack #1: \$29.95. Lunar Rover Patrol, Cubix, Decathlon, Qix & More.

Treasury Pack #2: \$29.95. Lancer, Ms Gobler, Froggie, Madness & Minotaur, Ice Castles, Galagon, Devious.

Space Pac: \$29.95. Color Zap, Invaders, Planet Invasion, Space Race, Space War, Galax Attax, Android Attack, Whirlybird, Space Sentry, Storm Arrows.

Classic Pack \$74.95. TP1, TP2 & Space Pac (\$90)

Speed Racer \$34.95 Pole Position type race.

Demon Seed \$19.95 Battle diving, bloodthirst bats.

Cashman \$29.95 40 levels of animation & sound effects.

Fury \$24.95 Airborn dogfight simulation.

Time Bandit \$29.95 300 screens of full animation.

Outhouse \$19.95 A funny, fast action game

Mudpies \$29.95 Crazy circus fun.

Rommel 3D: \$34.95. Exciting 3D Tank Combat Game.

MICROCOM SOFTWARE 1387 Brighton-Henrietta, Townline Rd., Rochester, NY 14623

## VALUE DISK PACK \$54.95

### RSDOS UTILITIES (for CoCo 1,2,3 unless otherwise specified)

**SUPER TAPE/DISK TRANSFER:\$24.95.** Copies Basic, ML and Data files from Tape-to-Disk, Disk-to-Tape, Tape-to-Tape and Disk-to-Disk.

**DISK UTILITY 2.1A:\$19.95.** Perfect tool for every disk drive user. Allows blazing fast file copy, kill, rename, directory sort, format and info on programs with extreme flexibility and ease. Very user friendly.

**DISK LABEL MAKER:\$19.95.** Design professional labels with different borders, font styles, double strike and more. Supports DMP, Epson, Gemini, Star and compatible printers.

**COMPUTERIZED CHECKBOOK:\$19.95.** The perfect program to balance your checkbook. Add, view, modify and print accounts for checks, deposits and ATM transactions. Entries for Checking, Savings and other accounts.

## VALUE HOME PACK \$54.95

**HOME BILL MANAGER:\$12.95.** Schedule your billing effectively. Allows you to enter, edit, load and save bills & reminds you when due.

**CALENDAR MAKER:\$12.95.** Create annotated calendars, month by month. Memo feature allows "special day" reminders.

**MAILLIST PRO:\$19.95.** Create mailing lists sorted by name or zipcode. Create, Edit, View, Print and Sort mailing labels.

**COCO 3 SCREEN DUMP:** 32/40/80 column, PMODE 3/4 dump. Allows you to take snap-shots of screens while program is running! DMP & Epson/Gemini/ Star & compatibles. **\$19.95** (CoCo 2 version incl)

**BOWLING SCORE KEEPER:** Organize scores for team or individual player. View, edit, print & compare scores. **\$19.95**

**VCR TAPE ORGANIZE:** Categorize/organize your tape collection. Allows ratings for cautious viewing. **\$19.95**

**RGB PATCH:** Displays most games in color on RGB monitor. Req CoCo 3. **\$24.95**

### BACKUP LIGHTNING 512K

(ColorVenture)

Copies 35/40 track single/double sided & 80 track single sided disks in a single pass. Supports up to 4 drives, variable step rates. Copies OS9 and RSDOS disks in less time than some disk formats! Req 512K. **\$19.95**

### PRINTER LIGHTNING

(ColorVenture)

Store from 44K to 437K (approx 200 pages!) for output to printer with the fastest, most reliable print spooler for the CoCo 3. Compatible with ColorVenture Ramdisk In 512K. **\$19.95**

### RAMDISK

(ColorVenture)

Add two more 40 track drives to your system without losing an inch of desk space! Reset protection and lightning access - a fraction of a second! Req 512K. **\$19.95**

### SUPER 88

88 favorites from CoCo-Times. File, screen and printer control utilities. Dumps, enhancements, Basic programming helpers and stand-alone programs for a variety of uses. Purchased separately, a \$792 value. Packaged for Only **\$88.**

### TELEWRITER 64 : THE COCO UTIL

word processor for CoCo2! Transfer Standard Basic and Menu and key control for most ASCII files between CoCo & major word processing features. Disk **\$57.95** Tape **\$47.95** drive IBM compatible. **\$39.95**

**VIP CALC III:** Worksheets up to 512 columns by 1024 rows, 16 windows to monitor changes, 8 & 16 digit precision, trig -algebra-programable functions. 40, 64 & 80 column support with 4 color pop-up menus for great displays! **\$69.95**

### VIP DATABASE III: 40/64/80

column, 64 color screen displays, double clock speed, full indexing of files and menu support make this the best database for the CoCo 3! In-memory, lightning-fast record sorts, Multiple-criteria searches, built-in Math Package and Mail Merge. Fill your disks with records of your own design! **\$69.95**

**WINDOW MASTER:** 31 windows, 5 fonts/54 sizes, hires graphics. Req 512K, hires interface, joystick/mouse. **\$69.95**

**CBASIC:** Basic Compiler. Specify CoCo 1,2,3 **\$149.95**

**TheSOURCE:** Disassembler. Specify CoCo 1,2,3 **\$49.95**

### XENOCOPY

Transfer Standard Basic & ASCII files between IBM & 300 other formats incl. CoCo, NEC, Novell, TRS-80 & Zenith. Req 2 drive IBM compatible. **\$79.95**

# DISTO PRODUCTS

All Disto Products now carry a 1-Year Warranty. All Disto Add-Ons (& Super Controller II) include OS9 Driver Disks, unless otherwise specified.

- Disto Mini Controller (with RSDOS or CDOS): \$74.95
  - Disto Super Controller (with RSDOS or CDOS): \$99.95
  - Disto Super Controller II (with RSDOS or CDOS): \$129.95
    - Mini Eeprom Programmer Add On: \$54.95
    - Hard Disk Adapter: \$39.95 w/ RS232: \$69.95
  - RT Clock & Printer Interface: \$34.95 (OS9 Driver: \$19.95)
  - 3-in-1 Multiboard Adapter: Parallel Port, RT Clock & RS232 Port: \$74.95
  - MEB Adapter II: \$34.95
  - 4-in-1 Board: Parallel Port, RT Clock, RS232 & Hard Disk Interface: \$129.95
- RS232 Super Pack:** True RS232 Port for your CoCo! Compatible with Tandy® RS232 Pack. Includes DB25 Cable, 100% Compatible with OS9 ACLA Software. Req. Multipak. Only \$54.95

# HARD DRIVES

Systems w/ Seagate Hard Drive, Controller, Cables, CoCo XT Interface, Cables, Case (with fan, Power Supply and room for second drive), Software & Instruction Manuals. Assembled/Tested/Formatted. Just Plug'N'Run. Req. Multipak.

Seagate 20 Meg System: \$459!  
Seagate 40 Meg System: \$549!

**HARD DRIVE  
SALE**

CoCo XT: Use 2 5-120 Meg Drives with your CoCo. Only \$69.95 w/ Real Time Clock: \$99.95  
CoCo XT ROM: Boots OS9 from hard/floppy. Only \$19.95  
HYPERIO: Allows Hard Drive use with RSDOS. Only \$29.95.  
HYPERIO Disto Version. Only \$29.95  
HYPERIII: RAMDisk & Spooler to CoCo 3 HYPER I/O. \$12.95

**HYPERIO Utilities** (by Kevin Berner)

Hard Drive Utilities: MSA Backup, Copy/Kill/Rename, Hard Disk Backup to Floppies (vice versa) & more. Only \$21.95  
Disk Doctor: Checks/locks out bad sectors. only \$17.95  
Hard Drive Zap: View tracks, sectors, modify data on your hard disk. Only \$21.95

# DRIVES

2 Drive  
System  
\$299

There are a lot of dealers selling disk drives for the CoCo. Why buy from us? **First**, all our drives are BRAND NEW DOUBLE SIDED Drives. They are sleek, fast (6ms!), quiet and have a reputation of superb performance and reliability. **Second**, our Drive 0 & 2 Drive Systems come with the acclaimed DISTO Controller - with gold plated contacts & built-in ROM which allows you to access BOTH sides of our drives!. **Third**, our Drive 0 & 2 Drive Systems come with the Official 200 page Radio Shack Disk Manual. **Fourth**, you get \$50 worth of our utility software (Disk Util 2.1A & Super Tape/Disk Transfer). Our drive systems are head & shoulders above the rest!

- Drive 0 (with Disto Controller, Case, Power Supply, 1 Drive Cable, Manual, Software): \$199
- Drive 1 (with Case, Power Supply & Software): \$129
- 2 Drive System (With Disto Controller, Case, Power Supply, 2 Drive Cable, Manual & Software): \$299
- Full-Height Case/Power Supply: \$59.95
- Power Splitter: \$9.95
- 1 Drive Cable: \$16.95
- 2 Drive Cable: \$22.95
- 4 Drive Cable: \$34.95
- FD501 Upgrade Kit: Bare Drive, 2 Drive Cable & Instructions: \$109
- FD502 Upgrade Kit: Bare Drive, 2 Drive Cable, Power Cable & Instructions: \$119
- Toshiba 3 1/2" 720K Drive w/ Power Supply & Case: \$149
- 3 1/2" Bare Drive: \$99

## Other Good Stuff...

- DS69B Digitizer: Use your CoCo to display pictures from your VCR. Comes complete with CSEE Software. Only \$149.95. CoCo 2 Version: \$99.95
- Advanced Gravis Joystick: Features tension, rotary-centering, free floating with 3 buttons. Only \$59.95
- Deluxe 2-Button Joystick: Only \$16.85
- Multipak Locking Plate (Specify CoCo 2/3 and 26-3024/3124): \$8
- 5 1/4" DS/DD Disks: \$.40 each
- 5 1/4" Colored DS/DD Disks: \$.89 each
- 3 1/2" DS/DD Disks: \$1.29 each
- 5 1/4" Disk Case (for 70 disks): \$9.95
- 3 1/2" Disk Case (for 40 disks): \$7.50
- Black Ribbon: \$8.50
- NX1000 Color Ribbon: \$12.95

## Microcom Serial to Parallel Interface

- Run your printer at high speed (300-9600)
  - Designed by Marty Goodman so you know its quality.
  - Unlike other converters, this uses CRYSTAL oscillator which is VERY reliable at higher baud rates and different temperatures.
- Only \$44.95  
w/ Serial Modem Switch: \$54.95

# MONITORS

## MAGNAVOX ICM135 RGB Monitor

Razor Sharp picture quality for your CoCo! Has 14" Screen. Analog/ITL RGB, Composite & Super VHS inputs for CoCo 2/3. Stereo Sound, Text Display Switch, Tilt/Swivel Stand & 2 Year Warranty. Compatible with CoCo, IBM, a VCR & more! Only \$298 (add \$12 S&H/\$40 in Canada)

Magnavox RGB Cable for CoCo 3 and Composite Video / Audio Cable Set with Purchase of Monitor: \$19.95

## 512K CoCo 3

Brand new Color Computer 3 with 512K Installed and tested!

Comes with complete manuals and \$100 worth of software!

**Only \$259**

Please Add \$10 S&H

512K Installat. Voids Warranty

MICROCOM SOFTWARE 1387 Brighton-Henrietta, Townline Rd., Rochester, NY 14623

## 512K UPGRADES

Fully assembled and TESTED. Our design allows a firm contact and mounting chips on top to prevent any heating problems. Fast 120ns chips. No soldering; Easy picture instructions for 2 minute installation! Comes with following software (value \$100):

- 512K Ramtest • 512K Backup Lightning
- 512K Print Spooler • 512K Ramdisk
- OS9 Level II Ramdisk

The absolute best 512K Upgrade Available! Only \$99.95  
 0K Board (with 512K Ramtest/Ramdisk/Spooler): \$39.95  
 64K Upgrade (8 chip) for CoCo I, CoCo II's with Cat # 26-3026/3027/3134/3136: \$29.95  
 64K Upgrade (2 chip) for 26-3134 A/B CoCo II: \$39.95

**\$99**

## 1 MEG UPGRADE

- Upgrade your CoCo 3 to 1 MEG!
- Kit includes 512K Memory and necessary Hardware
- Includes OS9 Drivers by Kevin Darling
- Requires 512K CoCo 3 and soldering experience.

Zero K Kit: \$119

1 MEG Kit: \$159

## BIG BASIC (from Danosoft)

Get 92K from your 128K CoCo 3 and 476K on 512K for Basic Program and variables!! Only \$39.95  
 Super Big Basic (for Disto 1 MEG Upgrade): \$49.95

## COMMUNICATIONS EXTRAVAGANZA 2400

- (1) ZOOM 2400 Modem: Fully Hayes Compatible 300/1200/2400 w speaker, Auto Dial/Answer & Seven Year Warranty!
- (2) MOOEM CABLE (4pin to DB25; Reg \$19.95)
- (3) Autoterm Software (Reg \$39.95)
- (4) Free Compuserve Offer & Access Time
- (5) UPS 2nd Day Air Shipping

Only \$169.95

Zoom 2400 Modem: \$129

Avatex 1200e Modem Only: \$85

Communications Extravaganza 1200: Includes Avatex 1200e w/ 2 Year Warr., cable, Compuserve Offer, software & 2nd Day Air Shipping. Only \$109.95

## EPROM

**INTRONICS EPROM PROGRAMMER:** Programs 2516, 27xx/xxx series and more! Includes software & complete documentation. Latest version. CoCo 1,2,3. Only \$137.95  
**DATARASE Eprom Eraser:** For 24/28 pin Eproms. Erases up to 4 EPROMs at a time. Only \$49.95  
 Both Eprom Programmer & Eraser: \$179.95

2764 Eprom: \$8

27128 Eprom: \$9

ROMPAK (w/ Blank PC Board, 27xx Series): \$12.95

BLANK CARTRIDGE (Disk Controller Size): \$10.95

Eprom Burning Service: \$15 (Eprom Extra)

## KEYBOARDS

6 Feet Keyboard Extension Cable. Have up to 2 keyboards hooked up to your CoCo. Only \$39.95

CoCo 3 Keyboard: \$39.95 w/ Extension Cable: \$69.95

CoCo 2 Keyboard: \$19.95 w/ Extension Cable: \$49.95

(CoCo 3 Keyboard Includes free Function Keys Software)

## CABLES

Magnavox 8505/8515/8CM643 RGB Cable: \$24.95

Magnavox 1CM135 RGB Cable: \$24.95

Serial-to-Parallel Interface: Use your parallel printer at high speed (300-9600 baud) with CoCo. Comes with all cables. Only \$44.95

15" Shielded Multipak Extension Cable: \$36.95

Y Cable: Use your disk system with Speech/RS232 Pack, DS69 Digitizer, etc. Only \$27.95

RGB Analog Extender Cable: \$19.95

SONY Monitor Cable: \$29.95

MODEM Cable: 4 pin to DB25. Only \$19.95

2 Pos. Switcher: Hook 2 devices to serial port. \$29.95

HI-RES Joystick Interface: \$11.99

## CHIPS, ETC.

Genuine RS Disk ROM 2.1 (Needed for CoCo 3): \$29.95

68B09E Chip: \$14.95 68B21 Chip: \$5.95

GIME Chip for CoCo 3: \$39.95

Genuine RS Multipak PAL Chip w/ complete instructions (Specify 26-3024/3124): \$19.95

PAL Switcher: Allows you to switch between CoCo 2 & 3 modes when using the Multipak. You need the OLDER & NEW PAL Chip for the 26-3024 Multipak. Only \$39.95. With NEW PAL Chip Only \$49.95

MICROCOM SOFTWARE 1387 Brighton-Henrietta Townline Rd., Rochester, NY 14623

**TO ORDER:** All orders \$75 & above (except Printers, Monitors, Drives, Computers) shipped by UPS 2nd Day Air at no extra charge in Continental US. We accept Visa, MC, Discover & Amex (3% surcharge for Amex), check, MO & School PO's. COO Orders (for orders less than \$100) within US add \$5 extra. Please add 5% (min. \$3) S&H in Continental US & 10% (min. \$5) for Canada, Hawaii, Alaska & Puerto Rico. All foreign orders except Canada pay actual shipping charges (min \$5) for US Air Parcel Post/Surface Mail (specify). NYS residents please add sales tax. Our Australian Agent: Australian Peripheral Development: Ph: 07-341-9061.

Credit Card Toll Free Orderline 1-800-654-5244 (9AM-8PM 7 Days/Week)

Tech Info (between 4-8 pm), Order Status, Info: 716-292-1786, To Fax your order: 716-292-1775

## MLBASIC 2.0 - BASIC Compiler

If you want your BASIC programs to run up to 50 times faster, or want more programming features without learning another language, MLBASIC is for you.

MLBASIC is the most compatible BASIC compiler available for the Color Computer. WHY? Because MLBASIC fully supports:

- Low- and high-resolution graphics
- All types of I/O (disk, screen, printer, RS232)
- All available commands offered with BASIC
- Floating point functions and expressions
- Integer, floating point and string type variables and arrays
- Use of all available 512K RAM in the COCO 3
- 80, 40 or 32 column text displays

MLBASIC not only contains everything that you would expect a BASIC programming language should contain, MLBASIC has features that offer flexibility of other languages like C, Pascal, FORTRAN and even assembly language. These features will allow programmers to directly access the CPU registers on the COCO, produce modular program code with SUBROUTINES, manipulate memory in blocks, and even call ROM routines in other areas of memory.

MLBASIC revision 2.0 has incorporated all enhancements that were suggested by MLBASIC 1.0 users and more. Revision 2.0 did away with all the incompatibility problems that existed with revision 1.0.

MLBASIC allows for the first time user to quickly compile a program using default compiler settings. The advanced user has the capability of controlling over a dozen settings which control where the program is compiled, which medium to compile to (memory or disk), string space, compiler listings and more.

With all this going for MLBASIC, you might expect the cost to be a little out of your budget. After looking at prices of other BASIC compilers for the COCO 3 you might be correct. But look again at this ad; for only \$59.95, you can have a programming language that will spark your interest once again in the COCO.

Before you buy another BASIC compiler for the COCO, find out if it supports everything MLBASIC supports. Then look at the price tag. We feel that it won't be long before you place an order for MLBASIC.

"MLBASIC is a fine program for any serious programmer,"  
said David Gerald in the December 1987 RAINBOW.

**ONLY \$59.95**

COCO 3 WITH DISK REQUIRED - Add \$4.00 Postage.

Check, Money Order or COD accepted

Foreign orders use U.S. MONEY ORDERS only.

## Alpha Software Technologies

### Data - Windows

This is the ultimate database package for the COCO. System features include user definable fields, multiple key fields, automatic sorting, fast searching, browsing, user definable edits, user definable windows (database views), import/export/merge, cut/copy/paste, and even report and mailing label generation facilities. Makes full use of Multi-Vue, but does not require it to run! Multi-Vue style interface makes it easy to use! 512k OS9 Level II Required.....\$59.95

### Data - Merger

Easily create personalized mail-merge documents for your client/customer database, create invoices for your small business. Many capabilities include conditional printing, conditional print blocks, page formatting, repeating blocks, and more. Can be used with your favorite word processor for ultimate printing control. 512k OS9 Level II Required.....\$19.95

### Presto-Partner

All-in-one RAM Resident software for the COCO. Includes Note-Pad, calculator, calendar, alarm, auto-dial phone book, clock, OS9 command macros and more! Runs in the background! 512k OS9 Level II Required.....\$29.95

### Utilities

#### Level II Tools

25 Great tools to make your OS9 life easier. Complete wildcard, directory tree, and windowing commands help beginners and experts alike! 128k OS9 Level II Required.....\$34.95

#### Disk Manager Tree

No more fighting with complex directory structures and long path names. Use windows to view, create, copy, and delete files and directories with a single keystroke! 512k OS9 Level II Required.....\$29.95

#### The Zapper

Patches anything! Patch commands on disk, patch the OS9 boot file, fix CRCs, fix lost files, fix data. 64k OS9 Level I or II Required.....\$19.95

#### Multi-Menu

Create your own pop-down menu easily! Run any OS9 program from the menu. No programming required! 512k OS9 Level II & Multi-Vue Req.....\$19.95

### Communications

#### OS9 Level II BBS

Complete system comes ready to run. Use the built-in setup or create your own. Completely customizable. Features X/Y Modem, key-words, unlimited message base, ANSI graphics, see the board while it runs, and more! 512k OS9 Level II Required.....\$29.95

#### Warp - I

Complete terminal program includes Auto-Dial/Macro, X & Y modem, ANSI graphics, buffer capture, chat mode, timer, and more! 512k OS9 Level II & RS-232 Pak Req.....\$34.95

#### Hardware

##### Comm - 4

Get an incredible 4 serial ports in 1 PAK! Connect four modems/printers at once! Connect a Microsoft (PC) mouse! Special packed IRQ prevents lockups. Connect networking software to share peripherals! Perfect for a multi-line BBS! COCO 3 Req.....\$124.95

**HI FELLOW COCOISTS,**

MY NAME IS RICK COOPER I LOVE TO PROGRAM THE COCO I FEEL THAT  
HAVING YOU ENJOY MY PROGRAMS IS VERY REWARDING TO SHOW HOW  
STRONGLY I BELIEVE THAT I AM MAKING THE FOLLOWING SPECIAL OFFER

ONE OF THE MOST USEFUL PROGRAMS I HAVE WRITTEN IS CALLED NIB. IT  
IS A GRAPHICS COMPRESSION PROGRAM FOR COCO 3 PICTURES I USED IT TO  
SQUEEZE 12 HSCREEN2 PICTURES ON THE COCO GALLERY ON DISK I HAVE  
NEVER OFFERED THIS PROGRAM TO THE PUBLIC NOW I WANT TO SEND IT TO  
YOU FOR ONLY \$2.50 THAT MAY COVER POSTAGE, DUPLICATION, DISKETTE,  
ETC!! I'LL INCLUDE A SAMPLE GALLERY OF MY PICTURES TOO! **WHAT A  
BARGAIN!!** OR...IF YOU ORDER ANY OF MY PROGRAMS BEFORE  
FEBRUARY 1, 1991, I'LL INCLUDE IT FOR FREE!!

**RICK'S COMPUTER ENTERPRISE P.O. BOX 276 LIBERTY, KY 42539**

THE RAINBOW IS A REGISTERED TRADEMARK OF EAESOF, INC.

# Novices Niche

## Border Color Change

by Andrew Bartels

Here is a simple utility that allows you to greatly enhance your CoCo 3 screen displays. With the purchase of your CoCo 3, you were amazed at all the wonderful foreground and background color combinations that are available. Now you can control the border color, too!

*Border* works on 40- and 80-column text screens. To use the program, enter the listing and run it. The screen automatically changes to the 40-column text screen and the border changes to black. It is very easy to change the border. Determine the number of your favorite border color (0 to 63) and poke that value into address 32720. The border color changes instantly.

If you use this program often, you can save yourself the trouble of entering POKE 32720,X every time you run the program. The first number in Line 12 (0) is the default border color. By converting the color number to hexadecimal and substituting it for this number, you can have your favorite border color shown upon initialization.

There are three main parts to the machine-language portion of this utility.

The first portion, INIT in lines 150 through 190, initializes the routine that changes the border color. It trades the interrupt vector at \$010D with the address of the BORDER routine. The original address in \$010D is stored at the label JUMP and INIT returns to BASIC.

The second portion, BORDER in lines 230 through 270, is executed once every time an interrupt occurs, which is usually 60 times per second. When executed, this routine saves Register A on the stack and loads it with the color value stored at address 32720. This value is placed in the Border register of the GIME chip (\$FF9A). Finally, Register A is restored from the stack and the routine jumps to the original interrupt vector. Thus, while BORDER is executed upon any interrupt, other interrupt functions can take place as they would normally occur.

Address \$FF9A contains the border color displayed by the CoCo 3. To change the border color in a BASIC program, this utility can be used but is not needed. Simply poke the appropriate color value into \$FF9A to achieve the desired effect. When in direct mode, the border color

will not remain constant unless you regularly store the appropriate color value into \$FF9A. But *Border* allows the border color change while in direct mode.

The third portion, DONE in lines 200 through 220, is a short routine that takes the original interrupt address located at JUMP and places it back into \$010D. Thus, when an interrupt occurs, the CoCo 3 jumps directly to its interrupt service routine and skips the BORDER routine. If for some reason you need to disable the border color change, you can EXEC &H7FDE (the address of the DONE routine). To enable it again, EXEC &H7FD1 (the address of the INIT routine).

Warning! Do not attempt to execute INIT two times consecutively. Doing so will crash your CoCo! Make sure you end the INIT routine with DONE prior to starting INIT.

I hope this routine enhances your CoCo 3 screen displays. You may want to note that *Border* can be used to change the border colors in any of the HSCREEN modes, too. Enjoy!

# Would You Buy a Car You Couldn't Get Fuel For? Why Buy a Computer You Can't Get Software For?

Many of you are now considering an alternative to the Color Computer to run OS/9. Are you really going to invest in an untried alternative with very limited software? Why not buy a computer that will run a UNIX Compatible (OS/9 like) operating system AND MS-DOS. According to published articles, this combination of industry-standard operating systems would run more than 90% of ALL of the software that has EVER been written. Compare the software bases represented below. We call these systems the OWL ATom.<sup>TM</sup> Can your alternative to the CoCo be fixed locally? On-site service is available most areas on the ATom.

These highly adaptable computers we call the OWL ATom<sup>TM</sup> series. They are not newcomers to the computer world, but are the current versions of computers which we have been building for more than 6 years. All systems can be configured with your choice of hard drive, graphics monitor, and 6 different processors. The systems described here are typical of the new versions of our line which offer 2 industry-standard operating systems.

## OWL ATom<sup>TM</sup> ET or SX

For general features of our OWL ATom including expansion capabilities, check out the table below. Comparisons are also given to several Tandy<sup>TM</sup> computers. The resolution of the optional VGA is also given.

### Typical system components:

Processor: 80286-12 or 80386SX-16  
Floppy drive: 1.2 or 1.44 Meg  
Memory: 1MB  
Hard Drive: 40 MB, 28 ms.  
Monitor: TTL Monochrome (720X350)

### MS-DOS Software:

MS-DOS (with all utilities)  
GWBasic  
Integrated Software including:  
Desktop Organizer with tracker  
Outliner  
Word Processor

Spelling Checker  
Spreadsheet  
Data Base  
Graphics program  
Communications  
UNIX Compatible Software:  
Coherent<sup>TM</sup> (A UNIX Compatible Operating System)  
C Compiler  
Full Screen Editor  
Line Editor  
Text Formatter  
AWK Language and Yacc  
Standard UNIX utilities  
Documentation:  
Over 1500 pages and VHS Tape  
One of the best features is the price:

**\$1295/\$1495**

First year on-site service \$45 (Most areas)  
VGA Color (800X600X256 colors) \$400.

# Proven

On the Razor's Edge of

## The New Frontier:

### The Most Advanced Color Computer Drive Systems Ever Offered!

**Fast No-Halt SCSI Floppies Using Optional SCSI Controller**

**Proven Performance for Demanding Home or Business Users**

This is the most advanced, fully assembled CoCo hard drive system offered. Using the optional OMTI 5200 SCSI controller with our Hard Drive Interface, our new system will support no-halt floppy drives. You need not wait while typing or worry about clock time losses. Why be limited to 3 floppy drives? A complete system could now consist of 1-3 standard CoCo floppy drives, 1-2 (or more) hard drives, and 1-3 no-halt floppies using standard (not just CoCo) OS/9 format. You can use

single or double-sided 40 or 80 track drives with the SCSI no-halt controller.

There are several new features with this improved interface. These include:

- Full SASI/SCSI compatible (this allows many add-ons to the versatile SCSI buss)
- No-Halt Floppies with optional SCSI controller allows full type-ahead during access
- Low factory-direct prices

- Fast Delivery from factory stock
- Optional Real Time Clock with built in battery (3-10 year lifetime)
- With the Clock you have 240 Bytes of battery backed up RAM for password protection or data storage!
- Same super stable LRTech quality

Interface Price only: **\$85.**

Real Time Clock-RAM: **\$25.**

**20 or 30 Meg. 40 Meg. 80 Meg.**

**System Prices:** (Includes Hard Drive, case, & fan, SCSI Controller\*, LR/OWL Interface, Software. Fully assembled and tested.)

**\$495. \$535. \$875.**

**Super System Prices:** (LR/OWL System as above but OMTI 5200 SCSI Controller AND 3.5" or 5.5" HD 80 Track Floppy in same case)

**\$595. \$645. \$1039. (2 cases)**

\*SCSI controller is OMTI 5100. Add \$75 for OMTI 5200 with FDC.

### Introducing the **Quick-Link™** Interface

Provides both a 64K Printer Buffer and Serial and Parallel Interfaces.

**Serial to Parallel Printer Interface (64K Buffer) \$65.**

Converts serial computer output to parallel printer and also provides a 64K buffer in front of the printer. Serial side Female DB-25 and Parallel side is Centronics. Includes Centronics to Centronics cable and power AC-adapter. If you need an adapter from the CoCo 4-pin serial to DB-25 add \$9. From 300-38,400 Baud.

**Parallel to Serial Interface (64K Buffer) \$45.**

Same as above except it converts Centronics parallel computer output to DB-25 Female serial. Plug into an IBM printer cable to provide output to a serial plotter.

**Parallel to Parallel (64K Buffer) \$39.**

This is parallel printer buffer with no conversion.

### Drive System Parts

#### Hard Drives

20/30 Meg	ST/PTI	\$229.
40 Meg	PTI	265.
80 Meg	ST4096	590.

#### SCSI Controllers

OMTI 5100	HD Only	\$79.
OMTI 5200	HD/FD	169.
OMTI 5400	HD/FD/Tape	199.

(Note: We have no drivers for tape yet)

#### Cases and Cables

Case, 45 Watt PS, Fan	\$105.
Cable set (3 pieces)	25.

Drives have a 1-year limited warranty. Other parts are 90-day warranty. Please Note - At these prices, only very limited support can be given.

## DISK DRIVES

Bonus!  
Special  
Bundled  
Software  
with any  
Disk Drive  
Purchase!

### Floppy Drive Systems

The Highest Quality for Years of Service

**Drive 0 Systems** (Half Height, Double Sided,  
Direct Drives) **\$189.**

Drive 0 systems complete with drive, controller, legal DOS, cable, case, power supply, and manual

**Drive 1 Systems** (Half Height, Double Sided,  
Direct Drives) **\$115.**

**New 3.5", 720K Drives for OS-9 with case  
& Power Supply \$149.**

Drive 1 Systems have drive, case, power supply. (You may require optional cable and/or DOS chip to use)

**Special for 0/1 Combos (0,1,2,3) \$259.**  
**SALE Prices on Drives!**

#### HALF-HEIGHT DRIVE UPGRADES FOR RS HORIZONTAL CASES

Why only double the capacity of your system when you can triple in the same case? Kit includes: double-sided to fit your case, chip to run both sides of new drive, hardware, and detailed instructions. Easy! Takes only 5 minutes!

Model **Only \$119.**  
500, 501, or 502

All drives are new and fully assembled. We ship only FULLY TESTED and CERTIFIED at these low prices. We use Fuji, YE Data, and other fine brands. No drives are used or surplus unless otherwise stated to you when you order. We appear to be the one of the few advertisers in Rainbow who can truly make this claim. We have 7 years experience in the CoCo disk drive market! We are able to provide support when you have a problem.

**Drives 1 Year Warranty**

### OWL WARE Software Bundle

#### Disk Tutorial/Utilities/Games DISK TUTOR Ver 1.1

Learn how to use your disk drive from this multi-lesson, machine language program. This tutor takes you through your lessons and corrects your mistakes for a quick, painless disk drive introduction. (This professionally written tutor is easily worth the bundle's total price.)

#### 3 UTILITIES

A copy verify, copy, and DOS utility.

#### 2 GAMES

We will select 2 games from our stock. These are sold for more than \$20 each.

Do not mistake this software with cheap "Public Domain" software which others offer. All of this software is copyrighted and professional in quality. The tutor is unique with us and has helped thousands of new users learn their disk drive.

**only \$27.95**  
**(Or even better)**  
**only \$6.95 with**  
**any Disk Drive Purchase!!**

### 512K Upgrade

Again at a popular price. Fully assembled and tested before shipping. Easy to install. Uses fast 120 ns. chips.

**Only \$85.**

Now includes memory test, Ram Disk Lighting, Printer Lighting, and Back-up Lighting. All with an upgraded manual exclusive with OWL!

Our prices include a discount for cash but do not include shipping.

OWL-WARE has a liberal warranty policy. During the warranty period, all defective items will be repaired or replaced at our option at no cost to the buyer except for shipping costs. Call our tech number for return. Return of non-defective or unauthorized returns are subject to a service charge.

**OWL-WARE**

# Weights Measures

by Larry Pittman

**W**ould you like to know your weight in stones? Your height in centimeters? Or familiarize yourself with the metric system? *Measure* allows you to quickly convert from one type of measurement to another. I would normally not use a program like this with Disk BASIC since it requires finding the disk, loading the program and returning to the original disk and program. But with OS-9, the program is always available in the CMDS directory. OS-9's multitasking and windowing capabilities allow you to simply move to another window to run the program.

The procedures included in this program are Measure, Calculate and LowUp. Measure provides all of the necessary data for the conversion calculations. Calculate performs these calculations. LowUp changes a lowercase letter to an uppercase letter.

Measure examines the data statements for the various types of measurements. I have tried to include as many common measurements in this program as possible. Measurements not useful to the average user have been omitted. This program can be customized to include constants of your own choosing.

## Operation

First enter the three procedures and save the source in a data directory. Then use BASIC09's pack\* command to put them all into an executable file named Measure in the CMDS directory. Also make sure runb is in your CMDS directory.

One important thing to remember is that the ESC key will not work properly unless

Larry Pittman is an electrical engineer who enjoys writing programs for his own use. He can be contacted by writing 11406 Majorca Place, Fenton MI 48430; or by calling 313-750-0047.

the programs have been packed. During normal operation after the programs have been packed, pressing ESC at the Main menu causes the program to quit. Pressing ESC at any other time returns you to the Main menu.

To get the program running, just enter measure at the OS9: prompt. The Main menu lists all the measurements available in the program. Options include Linear, Volume, Weight, Force, Power, wOrk, Area, Dry, Temperature, Speed and tiMe. Notice that only one letter in each option is capitalized. Press the key corresponding to that capital letter to select the desired measurement. A sub-menu within the chosen measurement category then appears on the screen. For example, pressing P brings up the Power sub-menu. This menu provides options for Watts, Horsepower, Btu/min, Ergs/sec, Kilowatts, Ft lbs/sec and bTu/hr. Once again, the capital letters represent which key to press to select the input measurement. For example, select Watts by pressing W. You are asked for the value in watts you want to convert and the units to which you want it converted. Press the appropriate capital letter and you will be given the conversion. If you press an invalid letter, a beep sounds and the program waits for a correct response.

## Accuracy

Some of the values in the data statements are carried out to several decimal places. This may seem extreme, but it was done to ensure some degree of accuracy. For example, if 24 inches is the input value and feet is the output measure, the result would be displayed as 2.000 feet. The answer is displayed to four decimal places with the least significant digit accurate to plus or minus one.

## Customizing

*Measure* can be modified to fit the needs

# First Prize<sup>TM</sup>

Now you and your CoCo II or 3 can make Awards, Certificates, Licenses, and Diplomas.

Templates categories include:

BUSINESS

of the individual user. New measurements and even new categories can be added to the existing program.

To add to an existing category, select a unique capital letter and determine the factor for each new measurement. In the first data statement for each category is a group of seemingly random capital letters. The new capital letter must be added to this sequence in the same location as the new measurement is placed in the data statements. The obvious limit would be the 26 letters available in the alphabet. Exceed this limit and you must use numbers or other symbols. The procedures are currently set to handle a maximum of 21 measurements per category. If you exceed this limit, increase the size of arrays name and value in the TYPE statements at Offset \$006F in Measure and Offset \$0000 in calculate.

Measurements can also be deleted from the program. It is advised, however, that you leave the base measurement intact. The base measurement in each category can be identified as the one with the factor set to one. If the base measurement is deleted, choose a new base measurement by setting its factor to one and revising all the remaining factors.

The factor, the number following the measurement type, is determined by finding the number of base measurements per desired measurement. For example, examine the Linear measures data beginning in Line 110 of the Measure procedure. Note that the base measure is in meters since 1 is its factor. The number following every other measurement represents the number of meters in that other measurement. There are 1000 meters in a kilometer, so the number following kilometer is 1000.

The above examples do not apply to the Temperature category since these conversions are calculated differently. I am not aware of any temperatures other than Kelvin, Centigrade and Fahrenheit.

A new category is added in much the same manner as a new measurement. First, determine a unique name and letter for the category. Modify Offset \$01E5 in the Measure procedure to add the new letter. Add the new category name for the Main menu at Offset \$01AB. Add ,220 to the end of Offset \$0228. Finally add data lines at the end of Measure, beginning with Line 220. Use the format of the already existing DATA lines. Note that this represents a new subroutine and must be ended with a RETURN statement. □

## About Your Subscription

Your copy of THE RAINBOW is sent second class mail. You must notify us of a new address when you move. Notification should reach us no later than the 15th of the month prior to the month in which you change your address. Sorry, we cannot be responsible for sending another copy when you fail to notify us.

Your mailing label also shows an account number and the subscription expiration date. Please indicate this account number when renewing or corresponding with us. It will help us help you better and faster.

For Canadian and other non-U.S. subscribers, there may be a mailing address shown that is different from our editorial office address. Send your correspondence to our editorial offices at Falsoft, Inc., The Falsoft Building, P.O. Box 385, Prospect, KY 40059.

### SYSTEM IV COMPUTER

#### PERFORMANCE - FLEXIBILITY - VERSATILITY

**MC68000 Microprocessor - 16 MHz**  
**1 MB of DRAM (0 wait state) 4 MB optional**  
**VGA Video Card - 800 X 600 X 16 to 320 X 200**  
**X 256 or a Hercules Monochrome Card**  
**Seven PC/XT Compatible Slots**  
**Floppy Disk Controller (37C65) supports two 360K, 720K,**  
**1.2M or 1.4M Drives**  
**One 1.4 MByte, 3 1/2" Floppy Drive**  
**Four RS-232 Serial Ports and a Parallel Printer Port**  
**40 MB Hard Drive, 28 msec - optional**  
**Clock with Battery**  
**4 layer board**  
**Memory Expansion slot - add up to 8 MB of DRAM.**  
**Professional OS9/68000**  
**One Year Parts and Labor Warranty**  
**Mfg by Peripheral Technology**  
**200 Watt Switching Power Supply**  
**AT style keyboard**  
**Baby AT Case - holds three 5 1/4" 1/2 ht drives**  
**and one 3 1/2" drive accessible from the front and one**  
**3 1/2" internal drive.**  
**WD XTGEN Hard Disk Controller (MFM)**  
**Drivers and Descriptors for the Devices and Ports Included**

**Model K402-m with Hercules Monochrome Video Card . . . . \$1,399.00**  
**Model K402-v with VGA Video Card . . . . . \$1,499.00**  
**Model K401-m with 4 MB on-board DRAM, 40 MB Hard Drive**  
**(28 msec) and Hercules Monochrome Card . . . . . \$1,899.00**  
**Model K401-v with 4 MB on-board DRAM, 40 MB Hard Drive**  
**(28 msec) and VGA Card . . . . . \$1,999.00**  
**Monitors available at reduced prices when purchased with SYSTEM IV.**

#### OS9/680X0 SOFTWARE

**SCULPTOR - Development System (68000) from . . . . \$2,500.00**  
**Quick Ed - Editor and Text formatter . . . . . \$ 275.00**  
**FlexLint - A must for C programmers . . . . . \$ 495.00**  
**Caching - High Speed Disk Caching (demo available) . . \$ 300.00**  
**IMP - Intelligent Make Program . . . . . \$ 250.00**  
**DISASM\_OS9 - OS-9/68K 3-pass Disassembler . . . . . \$ 250.00**  
**Windows - C Source Code Windowing Library . . . . . \$ 250.00**  
**Profile - User State Program Profiler . . . . . \$ 270.00**  
**PAN Utilities - C Source Code Utility Set . . . . . \$ 250.00**

(For boards and kits, contact Peripheral Technology at 1-404-984-0742.)

# A Trip to the Post Office

by Steve Blyn  
Contributing Editor

**T**his article marks the total consecutive installment of my column. I feel I have accomplished what I set out to accomplish many years ago. As a result, this will be my final chapter.

When I purchased my original Coco in early 1981, it was touted by Radio Shack as mainly a game machine. There were those of us who knew of its other possibilities. My forte was in the field of education. I was determined to use this computer to help my children and students learn. I knew computers could present educational material in new and interesting ways.

My faith was justified. Through my software company, Computer Island Educational Software, I learned firsthand that many schools, throughout not only this country but nations worldwide, had purchased CoCos and successfully used them to further the educational process. The Network it made CoCos very economical for classroom use. Creative minds developed excellent word processors, voice synthesizers, musical programs, touch pads and video digitizers. All of these became wonderful computer adjuncts and subject material for my columns as well as instructional tools in my classroom.

The Color Computer has had the longest life in the history of personal computers. Our early competitors like the Sinclairs, Apple I's and II's, Vic 20's, Commodore 64's, PC Jr.'s and Texas Instruments have all become obsolete. The CoCo is the only one that remains compatible with its origi-

nal version. This did not happen simply by chance. Much of the credit for the CoCo's longevity must go to Lonnie Falk for having the insight to create THE RAINBOW and grow with the industry.

In the early years, RAINBOW was not the only Color Computer magazine. Its competitors have long since disappeared. I want to publicly thank Lonnie Falk for his guidance and friendship over the years. I must also mention one other pioneer in the CoCo community. Greg Wilson was an Australian educator and businessman who met an untimely death. His early confidence in me and in the CoCo's ability to help children learn is greatly appreciated. These two men have had a positive influence on me. They always kept me thinking

about what else I could do with the CoCo.

This month's column reviews the life-skill math problem of buying multiples of stamps and postcards at a post office. The program helps to review arithmetic through verbal problems. In each example, random numbers of stamps and postcards are to be purchased. The student has four individual tasks to compute in each example. The amount needed for a random number of stamps is figured, followed by the amount for a random number of postcards. Then the amounts are added. Finally, the student computes the change received from \$10.

This program is suitable for middle-grade elementary students or anyone who might benefit from the arithmetic practice. The answers can be calculated mentally or with pencil and paper. Each portion of the problem must be answered correctly for the program to continue. This provides the children a way to monitor their progress. There is no limit on either the number of incorrect answers given to a problem or the time taken to successfully compute a problem. This lack of time restrictions is designed to improve the speed and accuracy of problem solving.

There are limits on the amount of 25-cent stamps and 15-cent postcards purchased in each example. These variables are on Line 50 and are as follows: Variable A is the number of stamps; Variable B is the number of postcards; Variable C is the total; and Variable D is the amount of change from a \$10 bill. You can change variables A and B to modify the program's difficulty for your children.

As stated earlier, this is my final article. However, I repeat my long-standing offer for you to share any thoughts on programs, articles or educational matters with me. I have always enjoyed and appreciated your communications. And I encourage the continuation of this relationship.

*Steve Blyn teaches both exceptional and gifted children, holds two master's degrees and has won awards for the design of programs to aid the handicapped. He owns Computer Island and lives in Staten Island, New York.*

## Lyra

Lyra, the ever popular music editor that lets you compose music using a mouse, is also available for the IBM PC. All the music you make with the CoCo version is compatible with the PC version. Only \$37 for Lyra and the 100 page Lyra Companion.

## CoCo MIDI Pro

CoCo MIDI Pro is a complete 16 track MIDI recording studio. Play music on your MIDI synthesizer and record it into your CoCo. Modify it with CMPro's powerful editing commands, and save it to disk or tape. Many professional musicians use the program and say that it is every bit as good as sequencers running on the IBM PC or Mac. Only \$125 for the program and the required MIDI interface program pek.

## Hot CoCo!

Hot CoCo! is a 50 minute audio tape that shows you how other musicians have put our products to good use. Check out the Rainbow October 1990 review that described this tape as "an excellent purchase, and I recommend it for all, whether or not they have a CoCo." Only \$9.95.

And don't miss our collections of music for Lyra-Lyra Library Classics and Streidl's Classics Over two hours of great classical music in each. Only \$22 each collection.

### MusicWare

Hamlet Route Box 1261  
Seaside, OR 97138.

Phone: (503) 738-0119. Ask for Lester Hands.  
Mastercard or Visa orders are welcome. Prices include shipping.

### 512K COPY UTILITY

--512K CoCo3, Disk--

Use arrow keys to select files to copy and press ENTER. All files selected will be loaded into memory before being sent to destination disk. A must for single-drive copies!

+PLUS+ Simplified KILL and RENAME command.  
+PLUS+ a FORMAT command that is 25% faster than DSKINI.

Supports up to 80 tracks -- 100% machine language.

### MAC to DMP \*\*NEW\*\*

--OS-9 Level 1 or 2, DMP-105,DMP106  
or compatible printers--

Print MAC picture files on your DMP printer. Works with any version of CoCo under OS-9. Comes with 6 picture files. -- 100% machine language

### SUPER BOOT

--Disk BASIC 1.1 or 2.1--

Install this utility on all your disks. Then just type DOS. Your system will be automatically configured to make optimum use of your hardware.

Sets printer baud rate (300-9600)

Sets drive step rate (6, 12, 20 or 30 ms)

Sets number of tracks (35, 36, 40 or 80)

Allows you to use double sided drives

+PLUS+ On a CoCo3 it sets the foreground and background colors.

Once your defaults are set, SUPER BOOT searches for a startup file (user defined). If the file is found, then it automatically LOADs (LOADMs) and RUNs (EXECUTES) the file. If there is no startup file then you are presented with a two column menu. Select a file from this menu and press ENTER. Make your CoCo truly user-friendly.--100% machine language

Each program \$15.00--Two or more \$12.50 each.

Carl England--128 Shepherd Dr. N.E.--Calhoun, GA 30701

# How Cold is it?

by Tony DiStefano  
Contributing Editor

I came across a neat little part the other day and thought it could be used for a great project. Readers are always asking me about connecting their computer to the real world. I have done many projects, but this one is a little different. The part I saw is an LM34. At first glance, it looks like just another transistor. But, don't transistors start with 2N or something? This part number starts with an LM. When I think of LM I think of something linear like an op amp, a voltage regulator or comparator and not a transistor. Maybe this is a *voltage reference*. A voltage reference is a part that provides a very precise voltage.

For example, if you have a 2.5-volt reference it looks just like a plastic transistor. It has three pins: not a base, collector and emitter, but an input, an output and ground. The input is some voltage greater than the expected output, the output is a very precise 2.5 volts and the ground is common to all. Even if the input voltage changes, as long as it is within specs the output voltage will never change. Hence, the name *reference*. If you want to compare another voltage with this reference, you can always tell if the unknown voltage is higher or lower by using a comparator circuit.

This LM34 is much like a voltage reference, but the output voltage changes a bit. Not a very good reference, you might say. But the output voltage changes quite predictably. Most importantly, it is directly proportional to the surrounding temperature. That's right, it gives a precise way of measuring temperature. When properly connected, this device gives you a current that can be translated into a temperature

reading. The specifications for the LM34 state that the output delivers 1 mA per degree Fahrenheit.

**W**hen properly connected, this device gives you a current that can be translated into a temperature reading.

Connect this device to a 100-mA meter, pencil in a scale and you have a temperature gauge. This works, but you could just go out and buy a thermometer to do the same thing. This is not what I have in mind. What I want is for my CoCo to read the current and provide a digital readout. There is only one problem, the CoCo cannot read milliamperes. It reads only zeros and ones. But, wait! We can use an A-to-D converter to perform the task. A-to-D means analog-to-digital. I will use one of these along with some other supporting circuitry to read the LM34. In order for a digital computer to talk to an analog device, a lot of circuitry is required. The rest of this column is dedi-

cated to the circuitry required to read the LM34.

In the past, I have used the \*SCS pin as an I/O area. This pin is mapped at \$FF40 to \$FF3F and is the same area that is used by the floppy-disk controller. This tends to confuse many users. Then comes the Multi-Pak Interface, which gives CoCo users four slots, each with its own switchable \*SCS area. It is a simple way to have more than one I/O device connected to the CoCo. But the Multi-Pak has been discontinued and many users go the way of the Y cable. The only problem with this is that anything that uses the \*SCS pin conflicts with the disk controller and will not work. But there is another way. By decoding the complete CoCo address bus, a circuit can reside in an unused area of the memory map.

Look at U1, U2A and U2B in Figure 1. These chips make up a new memory map area. U1 is a 13-input NAND gate. This means the output (Pin 9) goes Low when all of its inputs are High. U2A and U2B act as double-input inverters. When the two inputs are Low, the output goes High. So, if you study which address lines go straight into U1 and which get inverted first, you can calculate what address area causes the output of U1 to go Low. In this case the address area is \$FFA8 to \$FFA9. The reason the output is active for two locations is that Address Line A0 is not connected to the circuit. If A0 is High or Low, there is no change to the output. Since there are no devices active at either of these memory locations, there is no bus conflict and the circuit will work with just a Y cable.

If you have a device connected at this address, change the address lines from the High area to the Low. For example, if you swap A4 with A3, the address location changes to \$FFB6 and \$FFB7. You can change the address lines around to whatever map address you want. You have to be careful where it is mapped though. New devices

# Tomcat

## The CoCo 4 that Tandy should have made!

The **TC9 Tomcat** is the **ONLY** computer that will use your existing hardware AND software!

**TC9 Tomcat** is the affordable, logical upgrade path for your CoCo 3. And it is from a company which has a long and proven track record in the CoCo market — Frank Hogg Laboratory.

### 1991 Our 15th YEAR!

#### HARDWARE (FULL 1 year warranty.)

The Eliminator (2 RS232, 1 Parr, Hard/Floppy disk interface)	119.95
Battery backed Real Time Clock for The Eliminator	30.00
Western Digital WD1002-05 Eliminator hard/floppy controller	199.95

#### HARD DRIVES FOR THE COCO (FULL 1 year warranty.)

Burke & Burke 20 meg hard drive with 40 MS Fast Drive!	499.95
Burke & Burke 30 meg hard drive with 40 MS Fast Drive!	529.95
Burke & Burke 40 meg hard drive with 28 MS Fastest Drive!	659.95
Eliminator 20 meg hard drive with 40 MS Fast Drive!	779.95
Eliminator 40 meg hard drive with 28 MS Fastest Drive!	899.95

#### HARD DRIVES FOR THE TOMCAT (FULL 1 year warranty.)

Burke & Burke 20 meg hard drive with 40 MS Fast Drive!	434.95
Burke & Burke 30 meg hard drive with 40 MS Fast Drive!	464.95
Burke & Burke 40 meg hard drive with 28 MS Fastest Drive!	594.95
Eliminator 20 meg hard drive with 40 MS Fast Drive!	714.95
Eliminator 40 meg hard drive with 28 MS Fastest Drive!	834.95

**Call 315/469-7364**

This is the new Color Computer Tandy should have built! And it is *your* computing answer for the 90's.

What the **TC9 Tomcat** is and why it should be your next computer.

The **TC9 Tomcat** is a major improvement over the CoCo 3.

The **TC9 Tomcat** is 100% compatible with all your present CoCo hardware AND software\* with no modifications necessary. (\*using optional FHL RSDOS software, OS9 Auto-8cot is INCLUDED!)

The **TC9 Tomcat** supports 1 megabyte of on-board RAM!! has two serial ports, one parallel port, has 33% better sound and joystick resolution, an internal speaker, a PC style power supply, uses a 101 key detached keyboard.

The **TC9 Tomcat** comes in a stylish enclosure that will hold all your cartridges and drives, imagine, no more messy wires!

What is *significantly* important is that you can use all of your present software with the **TC9 Tomcat**! Right. You don't have a major expenditure for new software.

#### The Software Advantage

Your new **TC9 Tomcat** is compatible with Radio Shack DOS. It will run all of the programs you use every day. As an OS-9 machine as well, it will also work with all OS-9 software you either own now or plan to buy in the future. All of your CoCo cartridges like those from Disto and Burke & Burke and ROMpaks will work with your new **TC9 Tomcat** as well.

But there are even greater advantages to the **Tomcat** system -- and an affordable path to upgrade your CoCo without losing *any* of the value you have in your CoCo system today.

**Tomcat** is also compatible with the FHL K-Bus, which means you can interface it to a 68000 CPU, or even the 68030. While that sounds very technical, the truth is it is as easy as plugging in a couple of boards. You do NOT need to have a 68000 to use your **TC9 Tomcat**, but you CAN when and IF you want to. And once it is done, the **Tomcat** becomes just like two computers in one -- your own, reliable (but faster and more powerful) CoCo, and a 68000-based computer which will run OS-9 programs 30 times faster than before.

*Most important to you*, this is upgrading without throwing anything away! All of your present software will work. All of your cartridges, disk drives, printers will just connect into place. New horizons open with new software and new boards which will make your own CoCo continue to be your cost-effective, friendly helper and companion as computing moves into the 90's.

#### To Order

The **TC9 Tomcat** with 512K RAM, in a Mini-Tower case is only \$499.95. The case has plenty of room for your drives and other cartridges. The **TC70 Tomcat** can be added for full 68000 capability. Send for details.

The 101 key Keyboard is \$69.95.

The 8135 monitor is \$299.95.

Many other options are available, please call for more information.

The **TC9 Tomcat** board is only \$299.95 with OK for those who wish to build their own system.

Send for **FREE** descriptive brochure and get our **FREE** newsletter.

The **Tomcat**, designed for the future... built for today!

must be mapped to a free area in the memory map. A good knowledge of the CoCo's memory map is necessary if you want to change the circuit from what it is.

U3 is the heart of the circuit. It is an ADC0804 and is not hard to find. As you can see in Figure 1, U3 has eight data lines that connect directly to the CoCo's bus. The Chip Select line (\*CS) connects to our memory map decoder. This device has two separate lines for reading (\*RD) and writing (\*WR). This is mainly for Intel products that have separate signals coming from the CPU. The CoCo's CPU uses one Read/Write line, so the inverter (U2C) is used to generate the required signal.

On the other side of the chip, we start at the top with VI+. This is the analog input to the device. VI- is set to ground in this circuit, but can be used as a differential input if need be. The next two pins are the CLKR and CLK inputs. The ADC0804 uses a technique known as *successive approximation* to determine the unknown input voltage. A clock input is needed to shift the data to its proper registers. This clock is

controlled by the RC constant at the two clock pins. Without going into many details, the required clock signal is achieved by the values given in the diagram. The complete conversion requires 64 clock cycles. The typical clock frequency is about 640 kHz, which gives this device the ability to do about 9000 conversions per second. This is quite slow by comparison to the flash converter but is fast enough for this application. If you want more details on this ADC, look it up in the National Semiconductor Corporation *Linear Databook 2*.

The next input on the data side is VREF. When used, this Voltage Reference input pin serves as an exterior voltage reference. When not used, the internal VCC voltage is used. We'll look at this pin more closely later when we connect the LM34. The last pin is the Analog Ground signal (AGND). In this circuit it is connected to the computer's ground, but the two can be different.

To construct this circuit, use the standard tools for project building. Apart from the soldering iron and other small tools, the following parts are needed for this portion

of the project:

#### Part Number Part name

U1 74HC133  
U2 74HC02  
U3 ADC0804  
R1 10K, 1/4-watt resistor  
C1 150pF, 25v cap

MISC 1 - 14-pin socket  
1 - 16-pin socket  
1 - 20-pin socket  
3 - .1µF, 25v cap  
1 - project board  
1 - Y cable or MPI

Remember to use the sockets when assembling the circuit. Use the three .1µF caps to decouple the power supply. These must be placed close to the sockets. Connect one side to +5 volts and the other to ground. As usual, the +5-volts and ground signals to the ICs are not marked in the diagram to keep the diagram clean. A connection list for the ICs is given below:

Part #	+5v	GND
U1	16	8
U2	14	7
U3	20	10

The two TTL ICs used in this circuit are of the HC family. If you cannot find this family, the LS family will work just as well. Remember these ICs are CMOS and require careful handling. The project board can be any CoCo-bus compatible board. The only place I know to still get them is CRC. See their ad in THE RAINBOW. When soldering in the sockets, make sure to leave space for more ICs. I see a need in the near future for expansion of this circuit.

For those interested in back issues of "Turn of the Screw" I now have a book that includes all of my columns beginning with the first one from January of 1983. The book is called *A Full Turn of the Screw* and is available from several CoCo dealers in both the United States and Canada, as well as from THE RAINBOW.

Next time, I'll finish the circuit for the LM34 and include information on how to gain access to the data from assembly language and BASIC.

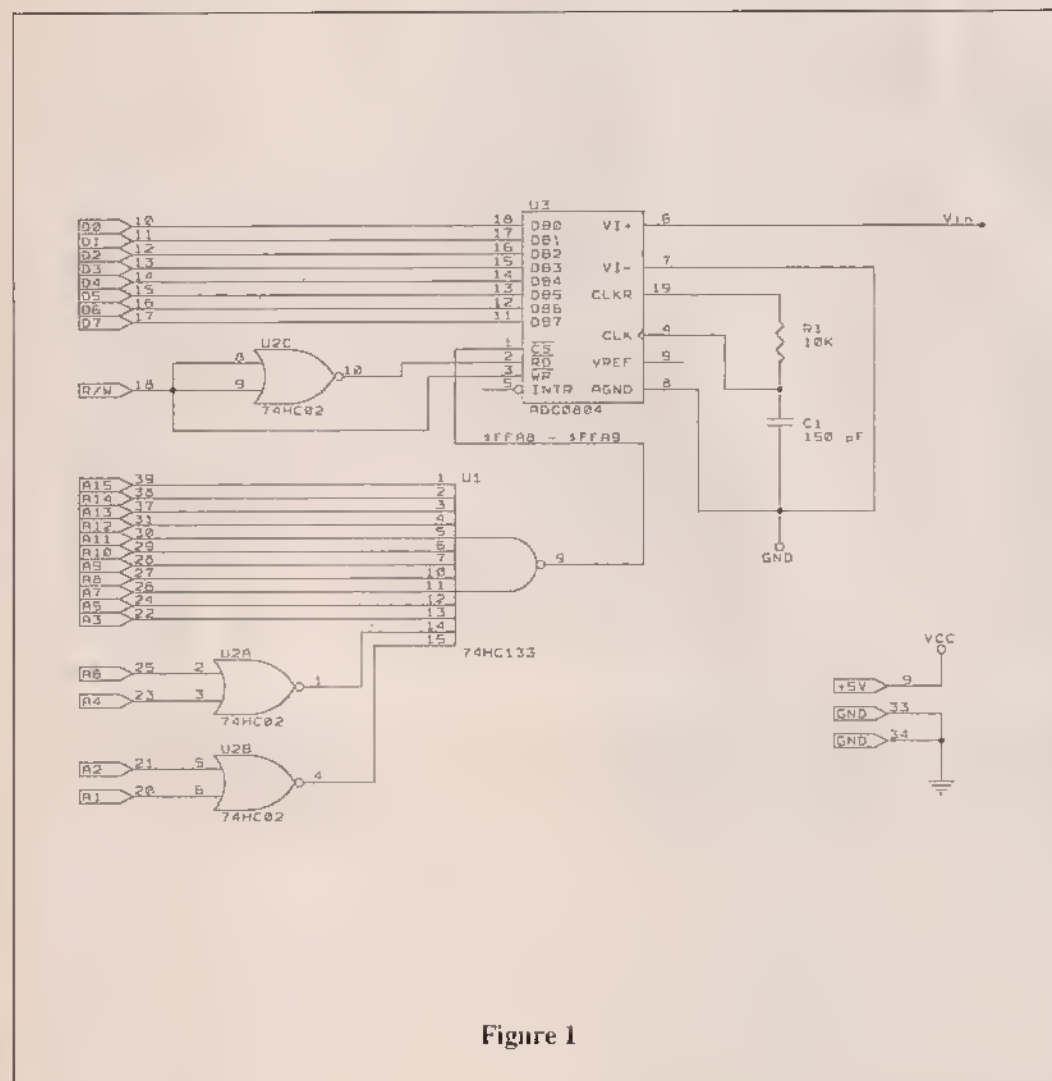

Figure 1

# Visualizing Fractions 2

by Fred B. Scerbo  
Contributing Editor

*If you have an idea for the "Wishing Well," submit it to Fred c/o THE RAINBOW. Remember, keep your ideas specific, and don't forget this is BASIC. All programs resulting from your wishes are for your use, but remain the property of the author.*

**V**isualizing Fractions 1 was a special program created last year for the CoCo. The fact that the program name ended with 1 should have been an indication that a sequel would follow. Unlike most sequels, Visualizing Fractions 2 is not an inferior copy of the original. Instead, it is the next logical step in our study of fractions. The first version of the program concentrated on simple identification of fractional parts from  $\frac{1}{2}$  to  $\frac{1}{8}$  and used the *Opposites* matrix which allows the user to use only ENTER and the space bar. Visualizing Fractions 2 is a completely different program.

This program concentrates on the relationship between different fractional parts and uses graphics to demonstrate the concept. For example, the first program showed the relationship between the written and visual representations of the fractions, this second program shows two fractions, both written and visual, and asks if the first fraction is: A) larger than; B) equal to; or C) less than the second fraction. For the correct answer press either A, B or C. As in all

our programs, pressing the @ key sends you to the score card and pressing C lets you pick up where you left off.

Another major change is the inclusion of instructions at the beginning of the program. Pressing ENTER at the title card allows for four levels of difficulty. Choose your level of play by pressing numbers 1 through 4. The instructions are then displayed on the screen. Press ENTER to start the program.

## Inner Workings

There are some major changes in how this program actually works as compared to our other recent educational programs. First of all this is a quiz, not an instructional program. The student gains knowledge with this program, but this knowledge is tested and graded.

Another difference with this program is that parts of it run slower than other similar programs. This slowness is due to the use of the GET and PUT commands. Since the choice of a wrong response will invert the graphics on the screen in a flashing manner, these commands are used to create the inverted screen on a lower graphics page. This is accomplished by using the NOT switch in the PUT command. This reverses whatever we had for graphics.

These graphics were a little more difficult to draw than in its predecessor. We could not simply draw the lines of the fraction and color in one part. Instead, if we had a fraction like  $\frac{4}{9}$ , we would also have to redraw in white the parts of the fraction which would be obliterated by our PAINT command. Therefore, by using two DRAW commands we are able to reinsert the miss-

ing lines for the student to see the division in the graphics. I think you will see the effectiveness of this improvement.

Finally, we had to add the value of each fraction to our equation. The decimal values in the data statements correspond to the fractions being drawn — both  $\frac{1}{2}$  and  $\frac{2}{4}$  are represented by the value .5 in the data. With this method, the fractions can be compared to determine which is larger, smaller or if they are equal.

### Conclusion

I kept this article short and to the point since there is so much typing with this listing. The length of this listing is due to the amount of drawing required.

Let me know what you think of the graphics in this program. I welcome any ideas you might have for parts 3 and 4 of this series.

See you next month.

## Hyper-Tech Software

### MVCanvas 2.0

Finally a professional full screen editor for OS-9 Level II and Multi-Vue. MVCanvas is the only CoCo graphics editor to support multiple resolutions with up to 16 colors of 64 displayed in 320 x 200 mode with palette animation and full functional clipboard.

MVCanvas also supports multiple fonts with ~~serifs~~, bold underline, and proportional options. Printer support includes: Epson, Star, C.Itoh, DMP (Tandy), with color printer supported for Star NX-1000 R, Citizen GSX-140, Tandy DMP-240 and CGP-200, Epson LQ-2550 and compatibles.

### ShellMate 2.2

ShellMate is the epitome of what a point and click file management system was meant to be. With ShellMate, you have access to commands such as copy, move, delete, rename, mkdir and free at the touch of a button. It also gives you point and click access to the Public Domain picture display utilities VEFShow and GIFOS9, as well as the archive utility Ar.

The biggest benefit of ShellMate is that it allows you to manipulate large batches of files with one mouse click when either copying, moving, deleting or archiving. You can also easily move through simultaneously displayed Source and Destination directory trees by either double clicking on a subdirectory name, or clicking on the "Parent" command.

### System Requirements (both programs)

CoCo3, OS-9 LVL II, Multi-Vue, Disk Drive and 512k  
MVCanvas .....\$49.95  
ShellMate .....\$24.95  
\$3.00 S/H \$2.50 C.O.D. (U.S. only) Nev. res. add 6% sales tax

## PRODUCTIVITY SOFTWARE BY Danosoft

**BEST WORD PROCESSOR**  
Dale Rickett's Feature Packed

*"Simply Better"*

"Significantly Better? Mais Ouil!"

• Rainbow, February, 1990

Has Database Features like holding a 5000  
mail list in memory for quick recall.

• Run 2 Interactive Wordprocessors at once •  
Mail-Merge • Sort Text • Create Tasks • Create  
Indexes • Table of Contents • Print-Fill Forms  
• Displays Fonts in Colors • Displays Underlin-  
ing • Print Spooling • Auto Saves • Print/Save  
Blocks of Text • To 480K of Text Storage •  
Numbering • Indenting • Calculator • Headers •  
Footers • Paging • Finds • Case Reversal • Help  
Screens • Preview "WYSIWYG" • Much More •  
Extensive Manual, with Tutorials.

Any CoCo3. Only \$39.95 US/ \$46.50 CDN.  
French Manual \$7.00 US/\$8.20 CDN.extra

### BIG BASIC

Get 92K from your 128K CoCo 3 and 476K on  
512K for basic programs and variables.

BIG BASIC creates programming windows  
with up to 58 separate running programs or  
58 parts of one large program or database.  
Allows big programs to run fast. Also disk  
chains unlimited program sections or data.  
7 Demos/Manual. \$39.95 US/\$46.50CDN.

### MEMORY MASTER

Scan, Edit, Copy, Printout, any computer or  
disk memory. Fix disks. Restore killed files.  
Enter M.L. Listings. Dual Windows! Run 2  
Programs at once! Disk chain unlimited pro-  
gram sections or data. Demo & Manual. Any  
CoCo 64K or more. 1.1 or 2.1 DECB. Only  
\$24.95 US or \$28.50 CDN.

### UTILITIES PACKAGE

6 Background running M.L. Utilities that  
allow your CoCo to access both sides of  
doublesided drives. Any CoCo 64K or more.  
1.1 or 2.1 DECB. \$17.95 US/\$20.80 CDN.

### BIG RAMDISK

Best software to simulate drives in memory.  
Install, re-install, format and reformat from  
direct mode or from a program. Up to 720K  
and 4 Ramdisks with the Disto 1 meg board!  
To 360K and 2 Ramdisks on a 512K.

Only \$12.95 US or \$14.95 CDN.

### MEMORY TUTORIALS

BABY BASIC for more program space.  
GRAPHICS UTILITY for many screens in mem.  
BABY BASIC: Any CoCo/GRAPHICS; CoCo3 only  
Only \$8.95 US/\$10.50 CDN. EACH Disk.

### COCO ARCHIVER

**NEW!** CoCo3 Disk File Manager & Archiver for  
RS-DOS. Lists archived files with descriptive  
memos and lists disk directories in 4 columns.  
Copies, kills & renames. Has Wildcards; BBS  
shareware feature. RETRIEVES to Disk, Screen  
or COMPUTER. \$17.95 US/\$20.80 CDN.

**Order by Phone/Mail**

## Novices Niche

Graphics

CoCo 3

### Coloring by Phil Elliott, Jr.

*Coloring* is an HSCREEN program for the CoCo 3. Instructions are displayed when you run the program. *Coloring* draws overlapping boxes and circles on the screen. You can color and paint the randomly created shapes with the specified key commands. There are 16 colors from which to choose. See if you can create familiar images by coloring the given shapes. Most of all, have fun!

# GET 'EM WHILE THEY'RE

# STILL HOT

## BACK ISSUES STILL AVAILABLE

Have you explored the wealth of information in our past issues? From our very first, four-page issue to many with more than 300 pages of material, it's all just for CoCo users — a great way to expand your library!

## A WORLD OF INFO AT A BARGAIN PRICE

All back issues sell for the single issue cover price. In addition, there is a \$3.50 charge for the first issue, plus 50 cents for each additional issue for postage and handling if sent by United Parcel Service. There is a \$5 charge for the first issue, plus a \$1 charge for each additional issue on orders sent by U.S. Mail. UPS will not deliver to a post office box or to another country.

## MOST ISSUES STILL AVAILABLE

Issues July 1981 through June 1982 are available on white paper in a reprint form. All others are in regular magazine form. VISA, MasterCard and American Express accepted. Kentucky residents please add 6 percent sales tax. In order to hold down costs, we do not bill, and no C.O.D. orders are accepted.

Due to heavy demand, we suggest you order the back issues you want now while supplies last.

To check availability and order, review and fill out the form below and mail it with your payment.

For greater convenience, order through the Rainbow Magazine Services area of our Delphi CoCo SIG.

### RAINBOW INDEX

A complete index for July 1981 through June 1984, is printed in the July 1984 issue. Separate copies are available for \$2.50 plus 50c handling.

Indexes for subsequent years are published annually in the July issues of THE RAINBOW.

# Basic Instructions

by Dale L. Puckett  
Contributing Editor

**E**ach January we get back to the basics and welcome a new group of potential OS-9 users, those who received a new CoCo 3 for Christmas. We'll take a fresh look at OS-9 and try to eliminate some of the initial apprehension surrounding the use of OS-9 by new users.

OS-9 has earned a bad reputation within the Color Computer community over the years because many people have insisted to newcomers that the operating system is hard to use and impossible to understand. This misconception is probably due to the tremendous computing power built into OS-9. In fact, the OS-9 command set is very similar to and as easily understood as its counterpart on MS-DOS machines.

Many options come with this power; options that give you an opportunity to make various choices. Unfortunately it is easy to become overwhelmed when faced with a command providing too many choices. If this happens you may lose sight of the fact that *no action* is always an option. A professional operating system like OS-9 almost always takes a popular default action if you decide not to make a choice on a command line. At the very least, most utilities print the proper command line and the options available if you feed it something undigestible.

We'll try to make your transition from the ROM-based BASIC language built into your Color Computer to OS-9 a smooth one by comparing several OS-9 commands to similar Disk BASIC commands you may

have already used. To do this, we'll tackle a few similar tasks with the two tools.

## Fundamentals

Imagine you need to print a message on the Color Computer screen. With Disk

BASIC, you can enter a simple command immediately after the computer has been turned on to perform this task. For example, entering

```
PRINT "HELLO, I'M A COLOR
COMPUTER!"
```

makes the CoCo print the following:

```
HELLO, I'M A COLOR COMPUTER!
```

Disk BASIC is a language, and one of the verbs in that language is PRINT. Each time Disk BASIC sees the word PRINT it looks at the string of characters or variables following that word and prints it.

If you need to print the same line on your screen several times, you could type in a short program and run it.

```
10 FOR X=1 TO 10
```

```
20 PRINT "HELLO, I'M A COLOR COM
PUTER!"
30 NEXT X
```

BASIC09 is one of several computer languages that run under the OS-9 operating system. Using an advanced design, it compiles each line of your program into an intermediate code, or I-code, as you enter it. As a result BASIC09 can run your programs four to five times faster than Disk BASIC. Programs written in BASIC09 are much easier to read and understand since they do not require line numbers, and you can use long variable names that convey meaning. Reading a BASIC09 program can be compared to reading the solution to a problem written in English. For example:

```
FOR LINE:=1 TO 10
PRINT "HELLO, I'M A COLOR COM
PUTER!"
NEXT LINE
```

When you run this program, BASIC09 produces the same results on your Color Computer screen as the Disk BASIC program above. If you needed a stand-alone program, you could write the same program using the C compiler that runs under OS-9:

```
main()
{
    int line;

    for(line = 0; line != 10; line++)
        printf("HELLO, I'M A COLOR
        COMPUTER!\n");
}
```

Disk BASIC, BASIC09 and C are all languages. While the syntax of each language is a bit different, the resulting screen output in the examples above is the same. Each language lets you do the same job.

*Dale L. Puckett, a freelance writer and programmer, serves as director-at-large of the OS-9 Users Group and is a member of the Computer Press Association. His username on Delphi is DALEP; on packet-radio, KOHYD @ N4QQ; on GEnie, D.PUCKETT2; and on CIS, 71446,736.*

OS-9 is *not* a language. Rather, it is an operating system. Its many utility commands let you perform various tasks. For example, the OS-9 echo utility lets you emulate the first Disk BASIC PRINT command line above. When you execute echo with the same parameters, it produces a similar output. Entering

```
echo HELLO, I'M A COLOR COMPUTER

at the OS9: prompt prints

HELLO, I'M A COLOR COMPUTER
```

Notice we did not put an exclamation point (!) in the command line. An exclamation point is a special character in an OS-9 command line — it is used to set up a command pipeline. We'll show you an example of a pipeline in just a bit.

A feature of many operating systems (including OS-9) is the *procedure file* (known as a batch file in another operating system).

A procedure file is a text file made up of commands. When you run such a file, the commands in it are executed just as if you had typed them directly. By repeating the above echo command line 10 times in a procedure file, you can simulate the Disk BASIC, BASIC09 and C programs above. However, since the OS-9 Shell, which executes procedure files, is not a complete programming language and does not include FOR ... NEXT loops, you will need to put the echo command in your procedure file 10 times.

```
build Tentimes
? load echo
? echo Hello, I'm A Color Computer
? echo Hello, I'm A Color Computer
? ...
? unlink echo
? press ENTER
```

Just type tentimes and press ENTER to execute the procedure file. The solution

above may not be elegant, but it works. It also illustrates the point that OS-9 is not really complicated. It is simply an alternative way to perform a job.

### OS-9 Does Graphics!

OS-9 also lets you create graphics. To illustrate, we'll look at three ways to draw a box on the CoCo graphics screen. We'll use Disk BASIC first.

```
10 PMODE 1,1
20 PCLS
30 SCREEN 1,1
40 LINE (10,10)-(10,176),PSET
50 LINE (10,176)-(240,176),PSET
60 LINE (240,176)-(240,10),PSET
70 LINE (240,10)-(10,10),PSET
80 GOTO 80
```

Alternatively we could have replaced lines 40 through 70 with Line 40 below. But, we wanted to keep our example programs parallel.

CoCoPRO! was proud to announce the introduction of a new game from the illustrious Steve Bjork, at the Atlanta CoCoFEST! Although this game was written exclusively for Fest attendees, we are offering our last 100 copies for sale to those who couldn't join us!

### MARTY'S NIGHTMARE- the Search for the Last Seminar

In this humorous orcode tribute to Morty Goodman, you can learn just how Morty must feel having ALL that CoCo knowledge!! Features hardware scrolling, over 100k of digitized sound, GREAT graphics, and LOTS of laughs for anyone who loves the CoCo community, whether or not they usually play games. Sure to become an instant CoCo collectible! Req. 512k CoCo-3.

**\$24.95**

### Tandy Flight Simulator II

OS-9 IV. II flying fun! Req. CoCo-3  
Brand-new, factory-sealed!! **\$9.95**

### Japan Scenery Disk for above

Explore the orient! Rare supplemental disk from subLOGIC. Factory-sealed! **\$24.95**

### OS-9 Level 2

Take the plunge! Incredibly powerful operating system, at an INCREDIBLE price! Brand new!

Refoil \$79.95- our price **\$34.95**  
Quantities limited. Add \$6 ship.

(313) 481-DAVE (3283)  
BBS- (313) 663-6207  
3-12-2400 7-E-1

```
40 LINE (0,0)-(255,191),PSET,B
```

To draw the same box on a CoCo 1 or 2 with BASIC09 running under Level I, use:

```
run gfx("clear")
run gfx("color",7)
run gfx("move",16,16)
run gfx("line",16,176)
run gfx("line",240,176)
run gfx("line",240,16)
run gfx("line",16,16)
```

The above commands work on the graphics screen supported by OS-9 Level I. To run the sequence with OS-9 Level II windows on a Color Computer 3, use the line commands built into the handy gfx2 module that comes with BASIC09. You can use the above gfx commands under OS-9 Level II, but you must be working in a *hardware* or Type I window. Note that when you work with OS-9 Level II's graphics windows, as opposed to text windows, the grfint module must be in your OS9Boot file. Never fear, stock OS-9 Level II comes built this way. If you have *Multi-View* and a little experience, you can gain better and more powerful access to graphics windows through the windint module supplied with *Multi-View*.

The gfx in the BASIC09 program lines above is the name of a BASIC09 module that interprets the high-level language parameters within parenthesis and sends the proper control codes to the OS-9 screen driver. The move command places OS-9's invisible graphics cursor at a position 16 pixels from the bottom of the screen and 16 pixels to the right of the screen's left edge.

The description of the gfx module above implies that you should be able to send these codes to the screen driver module from the OS-9 command line, which is true. In fact, an easy way to draw the box is to build a procedure file using the OS-9 display command.

```
build box
? load display
? display F 0 4
? display 10 4
? display 11 7
? display 15 10 10
? display 16 10 80
? display 16 F0 80
? display 16 F0 10
? display 16 10 10
? unlink display
? press ENTER
```

Again, because of the commands it uses, this procedure file must be used in a Type

I window. You can also type display followed by each of the hexadecimal numbers in one command line. In fact, it's much easier to do that way.

```
display F 0 4 10 4 11 7 15 10 10
16 10 80 16 F0 80 16 F0 10 16 10
10
```

We formatted the procedure file in such a way as to make it parallel in structure to the BASIC09 program. The line with display 15 10 10 places the invisible cursor used by the OS-9 graphics driver 16 pixels up and 16 pixels to the right of the lower left corner of the OS-9 graphics screen just like the move command in the BASIC09 program. Notice also that the OS-9 display command uses hexadecimal numbers while the BASIC09 program used decimal numbers. Location 80 is 176 pixels up from the bottom of the screen. Location F0 is 240 pixels to the right of the left edge of the screen. Notice how these numbers compare to the decimal numbers in the BASIC09 and Disk BASIC programs.

You can also use the OS-9 display utility with the proper control codes to move the graphics cursor, set individual pixels on the screen to a specific color, draw circles and paint an area of the screen with a specific color. While running under OS-9 Level II, you can even use them to open and close windows, create menus, and more.

Since you now understand that OS-9 is merely another way to give directions to your CoCo, we'll show you how to get started using OS-9. Hopefully, we can steer you past a few trouble spots along the way.

## OS-9 is an Operating System

Before moving on, we should take a few moments to talk about operating systems. In the language of a systems designer, an operating system controls the low-level processes within your computer. It gives applications programs a way to talk with and control your hardware. It also manages the memory and other finite resources within your computer.

These *processes* are nothing more than short programs that run and perform important jobs for you. These jobs may include putting characters in a disk file or sending a series of characters to a printer. Your system resources include external devices like your terminal, printer and disk drives. They also include objects inside your computer like memory and the microprocessor's time.

Think of an operating system as a traffic cop on a busy corner. The traffic cop directs the flow of automobiles on a busy street.

OS-9 directs the flow of information inside your computer, making sure that the right data gets to the right place at the right time.

## Getting Started with OS-9

To bring OS-9 to life on your Color Computer, insert your OS-9 master disk in Drive 0 and enter DDS. DDS is a Disk BASIC command that loads the OS-9 Kernel and starts the system.

Soon after you enter DDS, OS-9 asks you to tell it the date and time. (Add one of the many hardware clocks to your CoCo, if you have not already done so.) OS-9 uses the date and time to record when it saves a file, setTime, the OS-9 utility that asked you for the time, must be run each time you start OS-9. This program starts the software clock that runs within OS-9. If this clock is not running, OS-9 will not be able to run multiple tasks. If you want to know the current date while running OS-9, ask for it by using the date utility that comes with the system. Simply type date and press ENTER. OS-9 will print the date on your screen. If you also need to know the time, ask OS-9 to print it, too, by adding the t option. Enter date t.

If you type this command right after you start the system, OS-9 looks in its *module directory* (a fancy phrase for *memory*) for a module named date. Since you haven't loaded that module, OS-9 will not find it. But OS-9 knows other places to look — it now looks for date in its current execution directory (almost always /dd/CMDS on standard OS-9 systems). If you haven't deleted the date command from your disk, OS-9 will find it, load it into memory and execute it — it does this behind the scenes and in just a few seconds. All you see is the date appear on the screen.

If you know you are going to use date several times in a session, load it into memory by entering load date. After this, it will appear to run instantly. In fact, you can load a number of program modules into memory and have them instantly available. But, if you try to load too many programs into the crowded 64K work space, you quickly run into problems. There won't be enough memory in your computer to run the large programs that conduct most of your real work. For example, BASIC09 takes up approximately 22K of memory. This means you have to write programs in a number of small modules, loading each module from a disk when needed. The modular structure of BASIC09 is a big plus, but loading a module from disk every time it's needed can be a big pain.

## OS-9 Level II and Memory Problems

If you own a 512K CoCo 3, OS-9 Level II

will make your life much easier. It solves many of your memory problems by setting up a separate 64K of work space for each task running on the computer. Let's briefly compare OS-9 Level I and OS-9 Level II.

OS-9 Level I provides no memory management function beyond the 6809E processor's 64K address space. This limits your access to the 64K maximum.

OS-9 Level II works with two different types of work space. It sets aside a system work space that holds all of the device descriptors and device drivers that control the hardware, as well as the file managers, Kernel and other internals to manage your computer's resources. That same system work space is used for all of the data memory needed by OS-9.

After setting up its own system work space, OS-9 Level II sets up a separate work space for each process. Remember, a process is simply a running program. Each of these "user" work spaces can be up to 64K long.

When you run BASIC09 on your CoCo under OS-9 Level I, memory space is cramped and you have very little room for your own programs. For example, on my older Level I system I have 145 pages or just over 36K of free memory immediately after OS-9 starts.

After BASIC09 is loaded, there are only 55 left (just over 13K). That doesn't leave much space to work.

Now, let's see what happens when you run BASIC09 with OS-9 Level II. After BASIC09 is loaded, it just sits in memory. It will be available almost immediately, but it won't be using any data work space until you start it as a process by running it from the command line. When you do this, you have nearly 64K available for it and its programs. This means BASIC09 is able to use almost 64K, 22K for itself and nearly 42K for its programs and data. Actually, there is closer to 63.5K available in each workspace since the top 512 memory locations are mapped to the hardware.

### Making a New OS-9 Disk

One of the most important lessons when first working with OS-9 is to always work with a copy of the master disk from Tandy. Never work with the original disk. Accidents happen, even to experienced hackers.

Make a backup of your master disk the first time you run OS-9. It isn't difficult and shouldn't take much time. Think of it as an investment.

First, you will need to format a new disk. Enter load format free to load format and

free into memory. Now, take the OS-9 System Master disk out of Drive /d0 and insert the new disk. Type format /d0 and press ENTER. format asks you if you really want to format the disk in Drive /d0. After you confirm that the disk in Drive /d0 is indeed your new disk and not your System Master disk, press Y for Yes and the program goes to work.

You are then asked to name the new disk. You can make up any name since that name will be replaced when you backup the System Master disk on the new disk. After you enter the name, format verifies the data placed on the new disk.

When you see the OS9: prompt again, enter free /d0. The free command should report that a total of 630 sectors are on the disk and 620 sectors are available for use. If format finds any bad sectors on the new disk, it locks them out, and free reports a number smaller than 630. If this happens, do not attempt to backup your System Master disk to the new disk. The OS-9 backup utility requires that the format of the new disk be exactly like the original disk. If the two formats are not identical, backup will not work.

If your new disk is good, remove it and put the System Master disk back in /d0.

## Reviewer Information

In order to continue to bring Tandy Color Computer users all the best information about new hardware and software products each month, we are constantly looking for new people to join our independent review staff. Therefore, we invite you to join THE RAINBOW's elite fleet of reviewers.

You read THE RAINBOW because you love your Color Computer, so if you want a creative outlet and a chance to examine quality hardware and software, with your observations published nationwide, we want to hear from you.

Send us a cover letter with your name, address, occupation, list of equipment, areas of general interests, and a sample review of a CoCo product you are currently using. We look forward to your response. After all, we already see you have the best taste in computers.

FILL OUT  
YOUR COCO  
LIBRARY  
WITH  
THESE  
SELECTIONS

Mail to: Rainbow Bookshelf, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. To order by phone (credit card orders only) call (800) 847-0309, 8 a.m. to 5 p.m. EST. For other inquiries call (502) 228-4492.

Please note: The tapes and disks offered by The Rainbow Bookshelf are not stand-alone products. That is, they are intended to be an adjunct and complement to the books. Even if you buy the tape or disk, you will still need the appropriate book for loading and operating instructions. OS-9 is a registered trademark of the Microwave Systems Corporation.

Enter unlink format free to remove format and free from memory. Now enter load backup to load the backup command into memory. After the command has loaded, take the original master disk out of the drive and put in the newly formatted disk. Then enter:

```
backup -s /d0 #32K
```

When you are asked if you are ready to backup from /d0 to /d0, press Y for Yes. The program then instructs you to put the destination disk in the drive and press any key. OS-9 then asks if it is all right to write over (scratch) the disk mounted in the drive. Again, press Y for Yes.

You'll then be asked to get the source disk ready. Remove the new disk from Drive /d0, insert the System Master disk and press any key. You will have to repeat this several times, swapping the disks until the original disk is completely copied to the new disk. If you have two disk drives in your system, you will be able to run backup by putting the fresh disk in Drive /d0, the System Master in Drive /d1 and entering:

```
backup #32K /d1 /d0
```

Now that you have a new copy of your system master disk, store the original in a safe place. The important thing to remember about backups is that you can only backup a disk to another disk of identical size. You cannot backup a 35-track disk to a 40-track drive. Nor can you backup a single-sided 40-track disk to a double-sided 40-track disk.

To backup all the files on a disk of one format onto a disk formatted differently, use the OS-9 dsave command. Here is a series of commands that will do the job:

```
chd /d1
dsave /d1 /d0 ! shell
```

Notice that these commands assume you have two disk drives. After you have used OS-9 a few hours, you will discover that two disk drives are pretty much a necessity and not a luxury. The exclamation point in the command line causes OS-9 to send the output of the dsave command to the command interpreter, which is named shell. This is an example of the pipelines mentioned earlier.

### Customizing Your Disks

One of the most important advantages of OS-9 is that it allows you to customize your system. Unfortunately, this also makes a tremendous contribution to the myth that

OS-9 is difficult to use and understand.

Pledge to stick with the basics until you are ready to start modifying your system. Practice running the utility commands that are stored in the /d0/CMDS directory of your working system disk. Follow the directions in the OS-9 manuals and/or *The Complete RAINBOW Guide to OS-9*. After you understand what is happening with each command, move forward and modify your system.

Many of the problems encountered with OS-9 Level I revolve around the severe memory constraints forced by the limited 64K workspace. In fact, many of the error messages received happen because there is simply not enough free memory to load programs you want.

Another common error message for the beginner is Error 216, File Not Found. This error pops up for beginners since they do not fully understand the OS-9 file system.

The important thing to remember is that OS-9 always maintains two working directories. One of these directories is called the current execution directory. The other is called the current data (working) directory. OS-9 always looks in the current execution directory for the executable programs it needs. It usually stores all data files and looks for procedure files in the current data directory.

Here's the trick. The current execution directory and current data directory are seldom stored in the same physical position on two different disks. This means that even though these directories may have the same names on both disks, they are often not located on the same track or sector. Therefore, OS-9 may not be able to find your current directories if you swap the disk without telling it.

Here's the solution. If you remove one disk from a drive and insert another, type:

```
chd /d0/yourdirectory
chx /d0/cmds
```

Note that the directory names in the two command lines above are simply examples — you need to type the names of actual directories stored on the disk.

Hopefully, we have given you enough information to get you started with OS-9, and pointed out a few of the pitfalls. Hang in there and practice. Stick with the simple utilities until you thoroughly understand what is happening. After you conquer a command, move on to another. Soon, you'll be able to control your Color Computer with OS-9, and you won't feel like it's controlling you.

Until February, keep on hacking! ☺

# The C Zen Continues

by Greg Law  
Technical Editor

**T**he first stop on our journey is a tour of the *unbuffered i/o* functions, which are also referred to as *low-level i/o* functions. These functions are referred to as low-level since they pass arguments directly to the operating system without any intermediate steps. All of the low-level functions are described in Chapter 3 of the C Compiler Manual.

Before data can be written to or read from a file, the file must be created and/or opened. As demonstrated last month, an existing file is opened by calling `open()`, but this returns an error message if the file does not already exist. In this case, the file can be created by using `creat()`. Although both functions use the same parameters, there is one distinct difference between them. With `open()`, the access mode is specified. That is, to read and/or write data to the file. In the call to `creat()`, the file permission attributes are specified. The permission attributes are

<code>S_ISHARE</code>	Non-Sharable
<code>S_IEXEC</code>	Public Execute
<code>S_IWRITE</code>	Public Write
<code>S_IORREAD</code>	Public Read
<code>S_IXEC</code>	Owner Execute
<code>S_IWRITE</code>	Owner Write
<code>S_IREAD</code>	Owner Read

If a file is created with Owner Execute and/or Public Execute permission, it is created in the current execution directory.

*In addition to being OS-9 Online SIGop, Greg Law enjoys programming on all types of computers and has worked on systems ranging from the CoCo to the Burroughs B6700 super mainframe. He lives in Louisville, Kentucky.*

To create a file with Owner Read and Owner Write permissions, use:

```
creat("datafile.dat", S_IREAD |
S_IWRITE);
```

All of the legal access permissions are defined in the `modes.h` file and are listed on Page 3-11 of the C Compiler Manual. For example, assume we are writing an application that needs to rewrite an existing file or create a new one. As shown in Listing 1, this technique is actually quite simple. First, the program tries to open the file in write mode (`S_IWRITE`). If the file cannot be opened, the program attempts to create it with Owner Read (`S_IREAD`) and Owner Write (`S_IWRITE`) attributes. If the file cannot be opened or created, the program exits with an error. If all goes well, the file is

closed by calling the `close()` function and the program exits without an error.

Another method to determine the existence of a file is the `access()` function. This function works exactly like the `open()` function with one minor difference: `access()` attempts to open the file and returns a value to indicate success or failure. The file is closed if it was successfully opened and a value of 0 is returned. Otherwise a value of -1 is returned. An example of using `access()` is shown in Listing 2. If the file exists, it is opened using the `open()` function. Otherwise the program exits with an error. You would normally include the desired access mode to determine whether or not the attributes allow reading and/or writing data to the file. You can also use an access mode of zero to determine whether or not the file exists at all.

OS-9

## Listing 1: test\_1.c

```
/* BreakPoint
 * Written by Greg Law
 * Published January 1991
 */

#include <modes.h>
#include <stdio.h>

main()
{
    int path;

    if((path = open("datafile.dat", S_IWRITE)) == -1)
        if((path = creat("datafile.dat", S_IREAD | S_IWRITE)) == -1)
            exit(errno);

    close(path);
}
```

## Blowout Sale

Your Choice: 50%

off Price Marked!

Sale Ends: 01/31/91

### Pyramix

This is a fascinating CoCo 3 game of skill and coordination. Pyramix is 100% machine language written exclusively to take advantage of all the power in your 128K CoCo 3. The Colors are brilliant, the graphics sharp, the action fast. Written by Jordon Tsvetkoff and a product of ColorVenture. Disk: ~~\$19.95~~ \$9.76

### The Freedom Series

#### Vocal Freedom

Vocal Freedom turns your computer into a digital voice recorder. The optional Hacker's Pac lets you incorporate voices or sounds that you record into your own BASIC or ML programs. This is not a synthesizer. Sounds are digitized directly into computer memory so that voices or sound effects sound very natural. One "off-the-shelf" application for Vocal Freedom is an automatic message minder. Record a message for your family into memory. Set Vocal Freedom on automatic. When Vocal Freedom "hears" any noise in the room, it plays the prerecorded message directly from its Random Access Memory with amazing fidelity! You may also SAVE or LOAD sounds to and from DISK. VF also tests memory

to take advantage of from 64K up to a full 512K. Requires low cost amplifier (RS cat. #277-1008) and any microphone. Will run on a CoCo 1, 2, or 3. Vocal Freedom Disk: ~~\$34.95~~ \$17.48. Optional Hacker's Pac Disk: ~~\$19.95~~ \$9.98. Disk for both: ~~\$49.95~~ \$24.98

### Mental Freedom

Would your friends be impressed if your computer could read their minds? Mental Freedom uses the techniques of Biofeedback to control video game action on the screen. Telekinesis? You control the action with your thoughts and emotions. Your goal is to materialize and levitate objects with the power of your mind while avoiding the insidious cobra. Mental Freedom teaches peace of mind in the face of adversity. Mental Freedom even talks in a perfectly natural voice without using a speech synthesizer! Requires Radio Shack's low cost Biofeedback monitor, Cat. #63-675. Will run on a CoCo 2 or 3 but not CoCo 1. Disk: ~~\$24.95~~ \$12.48

### Lightning Series

These three utilities give real power to your CoCo 3.

#### Ramdisk Lightning

This is the best Ramdisk available. It lets you have up to 4 mechanical disk drives and 2 Ram drives on-line and is fully compatible with our Printer Lightning. Requires 512K CoCo 3. Disk: ~~\$19.95~~ \$9.98

#### Printer Lightning

Load it and forget it--except for the versatility it gives you. Never wait for your printer again! Printer runs at high speed while you continue to work at the keyboard! Disk: ~~\$19.95~~ \$9.98

### Backup Lightning

Reads your master disk once and then makes super fast multiple disk backups on all your drives! No need to format blank disks first! Supports 35, 40 or 80 track drives. This utility requires 512K. Disk: ~~\$19.95~~ \$9.98

### COCO Braille

Produce standard grade 2 Braille on a Brother daisy wheel printer. Easy to use for sighted or blind user. No knowledge of Braille is necessary. Call for free sample. Will run on CoCo 1, 2, or 3. Disk: ~~\$69.95~~ \$34.98

### VDOS the Undisk

VDOS, The Undisk, ramdisk for the CoCo 1 or 2 only. Available only on tape: ~~\$24.95~~ \$12.48  
VDUMP, backup Undisk files to single tape file. Requires VDOS. Tape: ~~\$14.95~~ \$7.48  
VPRINT, Print Undisk directory. Requires VDOS. Tape: ~~\$9.95~~ \$4.98

One commonly asked question is on the use of `access()` as opposed to simply creating or opening the file. Indeed, using `access()` may seem redundant in most cases. For example, if you are writing a terminal program with the Xmodem file transfer protocol it should be obvious that you don't want to overwrite existing files. Examine Listing 3 as I describe the actions taken by the program.

**B**efore data can be written to or read from a file, the file must be created and/or opened.

The three integer variables are used to hold the status returned from `access()`, the path number of the newly created file and the length of the filename. The two character arrays are used to store the filename and an odd-looking thing I call an extension. The brunt of the work is performed by the while loop. It first checks to see if the file exists. If the file exists, the original filename is restored by terminating it with a null character and an extension is concatenated onto the chosen filename. Finally the character used for the extension is incremented and the loop checks to see if this new filename exists.

Notice that in the first pass through the loop, the program checks the existence of a file named `datafile.dat`. In the second pass through the loop, the filename is changed to `datafile.dat_a` and then to `datafile.dat_b` in the third pass through the loop. This process continues until the filename finally reaches `datafile.dat_z`. If all 27 files exist, the `exit()` function is called to terminate the program. Feel free to modify and use this routine as you choose. □

#### Listing 2: test\_2.c

```
/* Breakpoint

#include <modes.h>
#include <stdio.h>
#include <string.h>

main()
{
    int status;
    int path;
    int length;
    char filename[29];
    char extension[3];

    strcpy(filename, "datafile.dat");
    strcpy(extension, "_a");
    length = strlen(filename);

    while((status = access(filename, 0)) != -1)
    {
        filename[length] = '\0';
        strcat(filename, extension);

        printf("Attempting <%=s>\n", filename);

        if((extension[1]++) > 'z')
            exit(0);
    }

    path = creat(filename, S_IREAD | S_IWRITE);
    close(path);
}
```

# Best Timing for 512K

by Marty Goodman  
Contributing Editor

**I** just purchased the Disto 512K upgrade board for my CoCo 3. The installation instructions that come with it recommend clipping two capacitors. You seemed to imply in your RAINBOW column of March 1989 that the Hemphill mod (adding a 47-ohm resistor in parallel with R22) is better and would make the DRAM chips run cooler. Can I use the Hemphill mod with my Disto memory board?

Thomas W. Fann (TOMFANN)  
Akron, Ohio

You can try using the Hemphill mod with the Disto or any other memory board. I should clarify, however, that I had reports and not actual personal data on the value of the Hemphill mod. Honestly, my own two 512K CoCo 3s have the clipped capacitor mod and seem to work quite well. The DRAMs are warm to the touch, but not broiling hot. I suggest you just try one timing fix. If you run into problems such as excessive heat on the DRAM chips or too many sparklies on the screen, try the other and see if matters improve. A lot may depend on differences between timing parameters of various brands of DRAM chips you might put in the upgrade.

## Switch-Hitting Monitor

How would I change my Magnavox 1CM135 monitor to allow convenient switch-

ing between the analog and TTL inputs? I want to have my CGA video and CoCo analog video connected to a switch box so I can easily switch the monitor between the two machines.

Dave Rohling (IARMBANDIT)  
Mills, Wyoming

A device to accomplish what you want would involve very tedious modification inside the monitor, as well as construction of a multiple switch box. Not only do you need to switch the seven separate video lines at the input, but the monitor itself must be switched between its analog and TTL mode. You would have to go inside the monitor and externalize whatever is connected to the TTL/Analog switch. All of this would take a lot of time, effort and the use of either a switch with many poles or a bunch of relays. Practically speaking, I doubt it would be worth all that trouble.

## In Search of Soldering Irons

Can you recommend a soldering iron to me? Can you suggest how I might fix a modem in which the 5-volt regulator and heat sink get so hot they often appear to cook other nearby chips causing the modem to seize up after about an hour of use?

Phillip Brown (THEFERRET)  
Berkeley, California

I use old Weller WCTPN solder stations. These sold new for over \$100, but I picked mine up for \$20 each, or less, at ham and other electronics flea markets. Such bargain purchases usually require repair, but repairs on these items are extremely easy to make. The design is very simple and straightforward. Weller is also very good about supplying service information and whatever parts you need at rather reasonable prices. These temperature-regulated, 60-watt units heat quickly and have lots of reserve power for tough jobs. For most of my fine

work I use the Weller PTR-7 tip. This is a screwdriver shaped tip that is 1/32" wide and heats to 750 Fahrenheit. Also consider Radio Shack's "build your own" soldering iron. Specifically, purchase catalog numbers 64-2080 (handle), 64-2081 (700-Fahrenheit heating unit) and one or more of their collections of tips for the same (64-2089, 64-2074, 64-2084). This system is, I believe, actually made by Ungar. Parts for it are probably not only available through Radio Shack, but through suppliers of Ungar soldering equipment as well. Radio Shack's prices are quite reasonable. Several of my friends have used this system and reported it works well for them.

As for your modem, I have fixed similar problems by removing the 5-volt regulator and placing it in a separate box with a heat sink on it. This results in the heat being dissipated outside the modem box where it doesn't affect other nearby chips. [Ed. Note: Marty notes that when this repair was attempted, the modem still had problems, apparently due to other regulators in the area or a flaky VLSI modem chip.]

## File Comparisons

Is there a Compare program that compares two copies of a disk file byte-for-byte to see if they are identical? I ask because I am concerned about possible viruses or worms.

Lorin E. Owens  
Bakersfield, California

Martin H. Goodman, M.D., a physician trained in anesthesiology, is a longtime electronics tinkerer and outspoken commentator — sort of the Howard Cosell of the CoCo world. On Delphi, Marty is the SIGop of RAINBOW's CoCo SIG and database manager of OS-9 Online. His non-computer passions include running, mountaineering and outdoor photography. Marty lives in San Pablo, California.

Many years ago Don Hutchison wrote a Disk Compare program. I believe a copy of it is posted in the Utilities section of the Delphi CoCo SIG. This program compared every byte of one file to another with the proviso that the files had to be binary program files and one had to reside in memory during the comparison. However, I would not worry about CoCo viruses or worms. There has never been a report of a CoCo Disk BASIC virus. In theory one could be

made, but it is awfully difficult to do and would be easily thwarted; a BACKUP command would cleanse any infected disks. An OS-9 virus is more likely, though to date there have been no such reports.

### Cassette Port Dissected

*I use BASIC09 and assembly language, and want to use the cassette port on the CoCo 3 to communicate with the outside world. Can you help me with the addresses for that port?*

Nyle A. Tack (BTACK)  
Peralta, New Mexico

Fully using the cassette port may be more difficult than you think. The 5-pin port consists of a relay-controlled switch (cassette-motor relay), a zero-crossing detector input and a 6-bit digital-to-analog converter output. Under Radio Shack BASIC, the relay is used to switch the cassette motor on and off. The zero-crossing detector is used in conjunction with appropriate

assembly-language software to detect the frequency and duration of an incoming cassette tone. The D-to-A converter is used, again in conjunction with ML software, to generate tones of specific types. All of these are controlled by a 6821 PIA chip, which is addressed internally in the CoCo from \$FF20 through \$FF23.

The cassette-motor switch is easy to use. Pins 1 and 3 of the cassette port are hooked to SPST relay contacts. The relay is controlled by the CA2 line of the PIA. This is mapped to Bit 3 of the control word at \$FF23. If bits 4 and 5 of \$FF23 are set to 1 (High), Bit 3 of \$FF23 can be used to control the cassette motor by writing a 0 or 1 to it. See the Motorola data sheet for the 6821 chip for details on control of the CA2 line.

The zero-crossing detector is fed by Pin 5 of the cassette port. If a zero crossing is detected, Bit 0 of the PA0 port of the PIA (mapped to \$FF20) is affected. Of course, that bit must be programmed as an input via the appropriate technique involving the

control word at \$FF21. Again, see the data sheet for the Motorola 6821 for details.

The D-to-A converter sends its output to Pin 4 of the cassette port. Pin 2 is ground. The voltage fed to Pin 4 is affected by the value written into bits 2 through 7 at port PA0 (address \$FF20). Again, those bits must be programmed as inputs first.

Unfortunately, OS-9 is a uniquely rotten environment for using either the zero-crossing detector or the A-to-D converter to recognize and generate tones. This is due to the fact that such ports require constant attention by software, which is something OS-9 is unable to do. However, you should have no trouble using the CoCo's cassette-motor relay under OS-9. If you are switching high voltages or a large current, you should add a second relay in cascade that is rated for the voltages and currents you want to switch.

If you plan to pursue this matter, it is almost essential to have the data sheet for the Motorola 6821 chip and the full service

**Borhe & Borhe**

P.O. Box 733  
Maple Valley, WA 98038

**U.S. ORDER DESK:**  
(800) 237-2409

**INT'L & TECHNICAL:**  
(206) 432-1814

### OS9 Software (\* >= 256K; \*\* >= 512K required):

CyberVoice (Software only) -- Run your S/S SuperVoice with OS9!	\$24.95
FILE SYSTEM REPACK -- Popular disk defragmenter.	\$29.95
R. S. B.* -- Real Disk BASIC for Level 2 (BASIC ROM required).	\$39.95
EZGEN 1.08 -- Bootfile editor. NEW VERSION!	\$19.95
PERTASCI* -- Multi-user scrambled letter word game.	\$19.95
WILD & MV -- Wildcard & move directory entry utilities.	\$19.95

### BASIC Software (\* >= 256K; \*\* >= 512K required):

HYPER-I/O -- 16K Hard disk / big floppy BASIC. B&B or DISTO	\$29.95
HYPER-I/O HD UTILITIES -- K. Berner's wild copy, delete, search.	\$21.95
DISK DOCTOR -- K. Berner's GAT editor; also hides media defects.	\$17.95
DAGGORPATCH -- Disk patch for Dungeons of Daggorath.	\$ 9.95
RGB-DOS FOR B&B -- 8K Hard Disk DOS, great M/L compatibility!	\$34.95

HYPER-I/O and RGB-DOS come on floppy disk & are EPROMable. HYPER-I/O allows large floppy and hard disk directories, with good M/L compatibility. RGB-DOS offers superior M/L compatibility and 160K directories only. We recommend HYPER-I/O for BBS & BASIC use, RGB-DOS for commercial M/L S/W.

### Affordable Color Computer Hardware:

CyberVoice -- Speech Synthesizer w/ OS9 software -- SPECIAL!	\$74.95
COCO XT -- Adapts PC hard drives to CoCo. OS9 S/W included.	\$69.95
COCO XT-RTC -- CoCo XT, with battery backed real-time clock.	\$99.95
XT-ROM -- Boots OS9 from B&B hard disk automatically.	\$19.95
4' B&B HARD DISK CABLE SET -- Extra long -- not the usual 24".	\$17.50
0K QuarterMeg (Add 8 memory chips for 256K, piggyback to 512K)	\$29.95
256K QuarterMeg (128K on-board + your CoCo 3's existing 128K)	\$54.95
Deluxe 512K booster kit (Upgrades 256K board to 512K, w/chips)	\$64.95
Bare 512K booster kit (Same as DELUXE, but no memory chips)	\$29.95

**NEW!**

### CyberVoice speaks well for OS9!

We've mated a high-tech SC-02 speech synthesizer with an entirely new kind of OS9 device driver that actually lets you specify your own pronunciation rules. You can even control the style and pitch of the voice - male, female, high, low, fast, slow - billions of combinations. Advanced features like instantaneous inflection control produce near human-quality speech! CyberVoice is compatible with the Speech Systems SuperVoice - buy H/W & S/W, or just the CyberVoice software.

manual for the CoCo 3. The latter provides not only the CoCo 3's schematic, but also diagrams of the innards of two custom I/O chips in the CoCo 3, which are critical to understanding the cassette input.

To further pursue use of the available possibilities on the CoCo, I highly recommend Bill Barden's new book, *Connecting the CoCo to the Real World*.

### Get a Boot out of DOS

*How do I use the DOS command to achieve auto-execution of a program?*

Alexi D. Papaleonardos (WTHUNDER)  
Columbus, Ohio

The DOS command causes the CoCo to load all data on Track 34 of the disk into memory starting at Location \$2600. The CoCo then examines the contents of \$2600 and \$2601, which are the first two bytes of the first sector of Track 34. If it finds \$2600 to contain the ASCII code for O and \$2601 to contain the ASCII code for S, it then proceeds to execute the code it finds starting at location \$2602. If it does not find OS in \$2600 and \$2601, program control is returned to BASIC. You must make the first two bytes of sector 1 of Track 34 be \$4F and \$53. Follow that with whatever machine-language loader program you want to start your code. Note that your loader program will probably involve code that loads other sectors from the disk using the DSKCON routine in BASIC or your own DSKCON-like routine in Track 34. You'll also need to lock Track 34 out of use via the granule allocation table to prevent that track from being overwritten. For more information, see Roger Schrag's "A Special Use for the DOS Command" (Rainbow, November 1984, Page 140).

### High-Speed Bit-Banger

*Is there any way to use the timer and serial-port interrupt lines in the CoCo 3 to make a bit-banger device driver for OS-9 that would allow use of the bit-banger port with a modem at speeds of 1200 baud or higher?*

Jason Bucata (JBUCATA)  
Ferndale, Michigan

One problem is the serial-port input interrupt is incorrectly wired on the CoCo 3. It triggers on the wrong edge of the incoming signal making it useless for its intended purpose, which is detection of the start bit of each incoming word. This can be fixed with a very simple hack inside the CoCo 3 (a single trace cut and a jumper to remove an unneeded inverter gate from the circuit). But since a hardware hack is required, few people have developed enthu-

siasm for writing driver software. It is also possible to make a special cable that shorts the bit-banger serial input to the bit-banger carrier detect. Then program the PIA chip that sees the carrier detect to generate an interrupt on each incoming start bit. This eliminates the internal hack, but requires a special cable. Long ago, one company produced an OS-9 terminal program that used such a trick for Level 1 OS-9 and the CoCo 1. (This matter was further discussed among OS-9 experts on the Delphi OS-9 SIG. Bruce Isted performed some calculations and guesstimations from which he concluded that it should be possible to write a bi-directional bit-banger driver for OS-9 Level 1 that would work at 1200 baud provided not too many other tasks were being performed. His calculations indicated that at 2400 baud, this hypothetical driver would tie up more than half of the CoCo 3's time, even with use of the interrupt and timer, and would not be acceptable for OS-9 multi-tasking. I know of no attempts to actually write such a driver. Frankly, it would seem to be a worthwhile endeavor.)

### Power from the Multi-Pak

*Where do I find +5v, +12v, -12v and ground on the Multi-Pak Interface?*

Steve Ricketts (STEVEPDX)  
Portland, Oregon

Pin 1 of the Multi-Pak supplies -12 volts at 100 mA, Pin 2 supplies +12 volts at 300 mA and Pin 9 supplies +5 volts at up to about an amp. Pins 33 and 34, as well as the clips on each side of the 40-pin connectors, are ground. Note that these voltages are also available on the CoCo 1, but a +/-12-volt signal is not found on the CoCo 2 or 3.

### No Semigraphics for CoCo 3

*My Audio Spectrum Analyzer and Phig 'n Power ROM Paks work fine on my CoCo 1 and 2, but give unuseably distorted displays on my CoCo 3. What is the problem and can it be fixed?*

Thomas E. Lucas (TOMLUCAS)  
La Grange, Illinois

Both of these ROM paks use the Semigraphics mode of the VDG chip in the CoCo 1 and 2 to achieve a combination of many colors and text on the screen at once with minimal memory for the program. This complex Block Graphics/Text mode is not supported by the GME chip in the CoCo 3. Fixing the programs would involve considerable rewriting. No fixes are available at this time. Note that in the case of Spectrum Analyzer, Steve Bjork wrote a version that did not use the Semigraphics mode, but it

took more space than the 4K he had available for the ROM pak. Sadly, his non-Semigraphics version is legally tied up and won't be released.

### Picturing the Sega

*How do I connect my Magnavox 8CM515 monitor to a Sega Genesis video game machine? I tried to hook the 8-pin TTL video port on the Magnavox 8CM515 to the 8-pin port on the Sega using Sega pinout information you supplied, but cannot get an image. I am puzzled by the fact that my Sega puts out Hsync and Vsync on the same pin, whereas my Magnavox apparently requires separate lines. Also, what is the use of the +5-volt and composite-video lines on the Sega Genesis and of the Intensity line on the Magnavox video input.*

Jody Romming  
Melrose, Wisconsin

First of all, you must not use the 8-pin TTL input port on the Magnavox. Instead, use the 6-pin analog-video input port since the Sega Genesis puts out analog video. The sync input circuitry on the Magnavox monitor is set up so it does not care what kind of sync you feed it; separate or combined, positive or negative. Just feed whatever sync you have into either (or both) the Hsync or Vsync inputs of the Magnavox. It will sort it all out and get the sync info it needs. Note this is not the case with the CM-8 monitor, which is less intelligent with respect to sync input. The CM-8 requires separate positive sync signals and will accept nothing else. For your reference, the 6-pin port on the Magnavox analog input has the following pinout:

- 1 — green
- 2 — Hsync
- 3 — gnd
- 4 — red
- 5 — blue
- 6 — Vsync

Pin 6 is the center pin, and pins 1 thru 5 are numbered sequentially clockwise as one looks at the socket on the Magnavox.

The +5-volt line on the Sega is present to allow powering some small circuit to facilitate sync conversion to produce different polarity or separate sync signals for monitors. The video output is present to feed into the composite-video input of monitors that have the same. This is the same type of one-line video signal used between present day VCR's and TV/monitors. This kind of video is also called NTSC composite video. Note that this sort of video will not give as nice a picture as RGB

video will. You do not need either the +5-volt line or the video line to connect your Magnavox 8CM515 monitor. You can run a cable that goes from the video line of the Sega to the video input on your Magnavox just to see how much poorer the video image is than the RGB image. The Intensity line is part of the IBM CGA digital video protocol and is of no use with the analog video output of the Sega or CoCo.

#### CM-8 for VGA?

Can I use my CM-8 monitor with an IBM VGA card?

Alan Parker  
Grissom AFB, Indiana

No. The VGA card requires a monitor that can sync to a horizontal scan of 31.5 KHz. The CM-8 syncs to only 15.75 KHz. Note that even when emulating CGA video, VGA cards put out a video signal that syncs at 31.5 KHz. In that mode, the VGA card scans each line of the VGA monitor twice in order to achieve lower CGA-type resolution. This is of no help to someone trying to use a CM-8.

#### Avoid a CoCo 3 Funeral

My CoCo 3 recently died. When I turn it

on I get a blank screen. Is the GIME chip bad? The 68B09E? Radio Shack wanted \$50 just to diagnose the problem with no guarantee of fixing it for that price. I am not familiar with working on electronic equipment and cannot replace a soldered chip. Who can help me fix the computer?

Brad Renfro  
Owensboro, Kentucky

If you do not have access to a friend who is skilled at desoldering and socketting 40-pin chips, your best alternative may be to just look for a good buy on a new CoCo 3. Note that they occasionally go on sale for \$129 at Radio Shack. CoCo Pro! (a RAINBOW advertiser) sometimes can sell used CoCo 3s for \$100 or less. What I would do is try the GIME chip from the bad computer in a known working computer. If that chip tests good, I'd swap out memory from the bad computer into a good computer to see if the memory was bad. If the memory tested good, we have exhausted the possibilities for socketted chips. The next thing I would do is desolder the 68B09E chip, solder in a socket and insert a new, good 68B09E. 68B09E chips are available from Janco of Belmont, California, but a \$25

minimum order is required. They are also available through several RAINBOW advertisers, including Microcom and Disto.

[Editor's Note: We recently had a similar problem with one of our CoCo 3s. We removed the cover and pressed firmly on all four corners of the GIME chip. This took care of the problem immediately. Of course, we suggest reseating the GIME with "proper" tools.]

Your technical questions are welcomed. Please address them to CoCo Consultations, THE RAINBOW, P. O. Box 385, Prospect, KY 40059.

We reserve the right to publish only questions of general interest and to edit for brevity and clarity. Due to the large volume of mail we receive, we are unable to answer letters individually.

Questions can also be sent to Marty through the Delphi CoCo sig. From the CoCo sig> prompt, pick Rainbow Magazine Services. Then at the RAINBOW> prompt, type ASK (for Ask the Experts) to arrive at the EXPERTS> prompt, where you can select the "CoCo Consultations" online form, which has complete instructions.

# Protect and highlight your important magazine collection with sturdy RAINBOW binders

## Distinctive, Durable RAINBOW Binders

THE RAINBOW is a vital resource to be referred to again and again. Keep your copies of THE RAINBOW safe in our quality, distinctive binders that provide complete protection.

These attractive red vinyl binders showcase your collection and ensure your RAINBOWs are in mint condition for future use. Each binder is richly embossed with the magazine's name in gold on the front and spine. They make a handsome addition to any room.

## Put an End to Clutter

Organize your workspace with these tasteful binders. Spend more time with your CoCo and eliminate those frustrating searches for misplaced magazines.

A set of two binders, which holds a full 12 issues of THE RAINBOW, is only \$13.50 (plus \$2.50 shipping and handling).

## Special Discounts on Past Issues

To help you complete your collection of THE RAINBOW, we're offering a special discount on past issues of the magazine.

When you place an order for six or more back issues of THE RAINBOW at the same time you order binders, you are entitled to \$1 off the regular back issue price. To order, please see the "Back Issue Information" page in this issue.

## Know Where to Look

You may purchase the "Official And Complete Index To THE RAINBOW" for \$1 when you purchase a set of binders. This comprehensive index of RAINBOW's first three years (July 1981 through July 1984) is usually priced at \$2.50.

For greater  
convenience, order  
RAINBOW Binders  
through the  
shopping area of the  
CoCo SIG of Delphi

.....  
\_\_\_\_ YES. Please send me \_\_\_\_\_ set(s) of RAINBOW binders

Take advantage of these special offers with your binder purchase:

\_\_\_\_ Save \$1 off the single issue cover price for back issues. Minimum order of 6 magazines. Please enclose a back issue order form from a recent issue indicating magazines wanted.

\_\_\_\_ Purchase the "Official and Complete Index to THE RAINBOW" for \$1. (Regular price \$2.50.)

(These offers good only with the purchase of a RAINBOW binder set)

## In the Name of EQUALITY

by Bob Delbourgo

*Scrabble* is as popular today as the day it first came out on the market some three decades ago. By contrast, the game *Equable* (the numerical version of *Scrabble*) made a brief appearance about ten years ago but is now almost forgotten. This may be because people feel more comfortable with words than with numbers. Whatever the reason, I thought it would be a good time to resurrect the numerical version as a challenging and educational game. I have dubbed it *Equality*.

The instructions for *Equality* are included in the listing. I will not repeat them except to emphasize that you are dealing with integer arithmetic (whole numbers from 0 to 9). This means the strict order of operations is division followed by multiplication followed by subtraction and then addition — the way the CoCo handles sums.

Move the cursor with the arrow keys and type in the character (from the hand you

have been dealt) to make an insertion there. You begin with two "equals" (=) signs. As the game progresses you may run out of them, at which time you can change your hand by pressing C, thereby missing a turn. Please ensure that sums are properly separated and do not involve more than one equals sign. Otherwise CoCo will react. The computer also checks to see that your entries are along a line and that your sums along that line are numerically accurate. It does not check whether they fit in an orthogonal sense (although in principle it could have been programmed to do so — but that would take too long). Your score is based on the number and type of pieces you have placed, not on what has already been laid on the board in a previous round (for the precise values, read the directions in the listing).

The listing has been liberally commented, so I will not say much about it. The only noteworthy part is the subroutine in lines 950 through 1140, which calculates the sum when a string (A\$) is input. The game should appeal to math teachers at the primary level but can nevertheless be played seriously at higher levels. It can even be played solo, the aim being to maximize your score within 24 rounds.

---

*Bob is a professor of physics, and he computes as a hobby. His interests lean toward scientific simulations and mathematical games. He may be contacted at 15 Willowdene Avenue, Sandy Bay, Hobart, Tasmania, Australia 7005.*

## 1990 COCO FEDERAL TAX

by PURITAS SPRINGS SOFTWARE

The leader in Color Computer tax software just got better! Completely revised for the 1990 Tax season. Bigger, better, and faster!

In his review of the 1987 edition, Ted Paul wrote: "This is an excellent program and manual, and I was in awe when the mail carrier handed me this huge bundle." COCO Clipboard Magazine, Mar/Apr 1988.

\*THE Ultimate tax preparation package, \*100+ page manual, \*runs on any 64K COCO 1, 2 or w/disk drive, \*consists of 3 diskettes, \*menu driven, \*loads & saves files to disk, \*prints to screen and/or prepares forms acceptable to IRS, \*format & organization follows IRS forms, \*built-in calculator, \*self checking for common errors and omissions, \*simple yet extensive editing features, \*disk directory function, \*Price - still only \$39.95

Includes: Form 1040; Schedules A, B, C, D, E, SE; Forms 2106, 2441, 4562; and State/Local Tax, Pension/Annuity, Social Security, IRA worksheets and more.

PURITAS SPRINGS SOFTWARE  
Ameritrust Building  
17140 Lorain Avenue

## BANKMAN

### Checkbook Program

A user friendly, menu-driven program for continuously up-dating your checkbook. Allows you to keep a running record of deposits, checks and accounts. Files can be saved, edited and printed out. Also, lets you reconcile and analyze particular accounts. Includes manual. Uses 32K. **ONLY \$39.95**

**COCO LABELS.** Creates a double-column multipage screen index. Printout 1, all or many copies of the same label. Print each line in a different font using Tandy (R) printer. Uses 32K. **NOW \$29.95**

**ENVELOPE WRITER.** For Daisy Wheel printers. Prints mailing and return address directly on the envelope. Custom fonts with Tandy (R) printer. Ideal for small jobs or the occasional envelope. Saves on time, frustration and labels! Uses 16K. **JUST \$19.95**

**TRADING POST** **DISK ONLY.**  
Send check or money order.  
P.O. Box 3453, Carbondale, IL 62902  
Specify CoCo 1, 2 or 3. Add \$3.00 S/H.

Try your creative  
hand at  
writing poetry

# Fishing

## for the Right Words

by Solla Carrock

computer poetry — a new genre. *Fishbowl* encourages you to let your creative juices flow. The program randomly chooses words or phrases

in the data lines and displays 12 of them. You then use the 12 words to compose a poem. The words I've put in the data lines are geared for a child, but an adult could also use them or modify the selection of words and phrases.

The 12 words act as a stimulus for writing a poem by requiring you to make unusual combinations of ideas and imagery. You can edit your work by replacing old lines with new ones. You can also print the poem at any time.

After the 12 words are shown on the screen, type in lines of the poem based on the words given. Up to 100 lines may be typed in (with an average of 90 characters or less per line). You must press ENTER to indicate the end of a line. To see the 12 words again, enter an asterisk (\*), then continue to add to the lines of the poem. To make a new choice, type a slash (/) and press ENTER.

*Solla Carrock is a writer and artist, with a master's degree in psychology. She has worked with children and has taught and counseled adults as well. She purchased a Color Computer about a year ago — for her daughter — and has been writing programs ever since.*

The program gives you a list of choices: View the poem, Print the poem, Change a line, Add new lines, or Write a new poem.

If you choose Option 1, press the @ key to print the first line of the poem on the screen. Press it repeatedly to print succeeding lines. Press R for a list of choices.

If you choose Option 2, you can print the poem by entering the letter P. If you do not type P, you are returned to the menu.

Option 3 lets you replace an old line with a new one. Type the line number and press ENTER. The old line is displayed, and you are asked to type a new line to replace

```

it. Then you are returned to make a new choice.

If you choose Option 4, you can again add lines to the end of the poem.

Option 5 asks you to type P and press ENTER to start a new poem with a new list of words. The program reminds you that this means the old poem will be lost, so if you fail to enter P, you are returned to the

choices and given a chance to print or copy the poem before going on.

While entering *Fishbowl*, you may change or add to the data lines, as long as you don't exceed 1000 pieces of data. Remember to put a @ character as the last piece of data (not anywhere else) in the data lines. Type RUN and press ENTER. If the program is typed in correctly, you should

see a fish in a fishbowl and hear music then, after a pause, a word list and instructions.

Make sure the program works correctly by using it — try all the options. Correct any errors by checking your program lines against the program listing. When you are sure the program works correctly, save the program on disk or tape. Enjoy.

### Model 101 \$37.95 (101P \$43.45) Serial to Parallel Printer Interface

- ★ Works with any COCO
- ★ Compatible with "Centronics" Parallel Input Printers
- ★ Just turn the knob to select any one of 6 baud rates 300-9600
- ★ Comes complete with cables to connect to your printer and computer
- ★ Can be powered by most printers

### Model 104 \$46.95 (104P \$53.95) with "Modem Switch"

- ★ Same features as 101 Plus
  - ★ Built-in Serial Port for your Modem or other serial device
  - ★ Switch between Serial Output and Parallel Output
- All items covered by a 1 year warranty

**SAVE \$2 PER ITEM**

BY SENDING CHECK OR M.O. WITH YOUR ORDER

#### Some of the Printers

That Can – Supply power for the 101 and 104 are Radio Shack, Star, Okidata, Brother, Juki, and Smith Corona.

#### Some of the Printers

That Cannot – Supply power for the interfaces are Epson, Seikosha, Panasonic, Silver Reed and NEC. If your printer cannot supply power to the interface you can order your interface with the "P" option or you can supply your own AC adapter. We recommend the Radio Shack 273-1431 AC adapter with a 274-328 connector adapter.

- ★ Free Shipping in the U.S.A. (except AK and HI) on all orders over \$50
- ★ On orders under \$50 please add \$2.50 for shipping and handling
- ★ Orders shipped in U.S.A. and Canada only
- ★ You Can Pay By:
  - ★ VISA or MasterCard
  - ★ Or send check or money order payable in U.S. funds, and deduct \$2 per item
  - ★ Ohio customers add 6% sales tax

# SUB-ETHA SOFTWARE

"In Support of the CoCo"

## • MiniBanners •

Multiple Line Banners on ANY Printer!

If you have a printer you need this program! Print banners with up to 16 lines of adjustable sized text. Works on any printer including daisy wheel and non-graphic printers (like the TP-101). Includes dozens of fonts. Contact us about CoCo 1/2, cassette, and OS-9 versions! Req: CoCo 3, Disk Drive, Any Printer... ONLY \$19.95

## • MultiBasic •

More Memory for Basic without Learning New Commands!

Why waste all that "extra" memory? MultiBasic lets you use it to create massive modular Basic programs. Or, have several programs loaded at once and "switch" between them, pass variables, share subroutines, disk chain, and more! Includes run-time version for you to distribute with your own programs!

Req: 128/512K CoCo 3, Disk Drive... JUST \$29.95

## • Shadow BBS •

Complete RS-Dos BBS with Low Hardware Requirements!

Power, speed and flair on the CoCo 3! This complete Bulletin Board System runs through the serial port or an RS232 port. No expensive hardware upgrades required to fully function with: Clock, On-Screen ANSI, Profiles, Surveys, Up to 255 Msg Areas, X/Y Modem, and entirely too much more to mention here! Trust us, you need to see it to believe it so call the Shadow's Realm, official Sub-Etha Software support board, at (409) 639-ETHA and check it out!

Req: CoCo 3, Disk Drive, Modem... A MERE \$39.95

Programmers! We are looking for new software. Contact us for details.

CoCo Clubs and educators: Call or write us about special discounts because at Sub-Etha Software we really are "In Support of the CoCo".

A multi-purpose text utility for OS-9

# Append

by Stephen B. Goldberg

**W**hen you want to add a name to your telephone list, wouldn't it be nice to just enter it without having to run your word processor, editor or database program? That is the original purpose of *Append*. It works nicely, but the program has grown into a multi-function utility that can also be used to replace the *build* and *merge* commands. The general syntax for *Append* is

```
append <destination> [source] [...]
```

To add lines to the end of a text file, type *append* followed by the name or pathlist of the file being appended and press ENTER. When the plus sign (+) prompt appears, type the line(s) you want to add, pressing ENTER after each. When you are finished, press ENTER by itself at the + prompt. Here is an example:

```
OS9: append fone ENTER
+ john jones (123) 456-7890 ENTER
+ philip smith (493) 293-4832 ENTER
+ ENTER
```

This adds the telephone numbers of John Jones and Phillip Smith to the end of an

*Stephen Goldberg is a dentist and the author of the Utilipak series of OS-9 utilities. He can be contacted at 695 Plainview Road, Bethpage, NY 11714. Please include an SASE when requesting a reply.*

existing file named *fone*. When you execute the program, if the file *fone* doesn't exist, *Append* automatically creates it. In this case it functions exactly like the *build* utility. It even uses the ? prompt in place of the plus sign.

## Putting Two and Two Together

If you want to merge several files into one large file, use a command line like

```
OS9: append big_fone family
business friends ENTER
```

OS-9

# New Modems

**(1) Two versions of SendFaxModems**  
Send any text file and most graphics files from your computer to any Fax machine in the world. Both external and internal (for PC) models. And with full 2400 Baud data modem capability.

**(2) V.42/V.42bis 2400 Baud data modems.**  
These have both error correction and data compression (gives much higher effective throughput, as much as 9600 Baud).

All are high quality modems made by Zoom Telephonics in the USA, with performance features unmatched by competitors costing three times as much.

Fully Hayes compatible. Work with any computer.

All the features you expect in state of the art modems. With two year mfg warranty (a seven year warranty is available).

Money saving premiums for Delphi, GENie, CompuServe, etc.

ProComm (PC) + \$5 QuickUnk (Mac) + \$5 WizPro is free (shareware)

Send Fax external modem	\$149.00
Send Fax internal modem (for PC)	\$139.00
Come with software for PC or MAC your choice (ask about Granite Computers OSK telecom software)	

2400 v.42/v.42bis external modem	\$235.00
----------------------------------	----------

2400/1200/300 BPS external modem	\$115.00
internal modem (for PC)	\$105.00

Please add: USA - shipping and handling	\$3.50
Canada - Air PP and Insurance	\$7.45

## GCS FILE TRANSFER UTILITIES

now updated to Version 3.0

The GCS File Transfer Utilities provide a simple quick method to transfer text and binary files to and from a variety of floppy disk formats.

Need to transfer files to and from PC (MSDOS), RSDOS, FLEX or MINI-FLEX disks on your OS-9 system? You need GCS File Transfer Utilities.

Commands: Dir, Dump, Read, Write, Rename, Delete, Format PC disk, Dir, Dump, Read Write RS or FLEX disk

Version 3.0 handles most 5.25 and 3.5 formats. Any level sub-directories (PC). Binary files. Use pipes for direct and multiple transfers. Multi-Vue version can be used under Multi-Vue or as stand alone Shell commands.

Requires OS-9 L2 for COCO 3 L1 for COCO 1 or 2  
2 drives (one can be hard or ramdisk, one floppy 40 T DD DS).  
Multi-Vue for Multi-Vue version  
SDISK3 for COCO 3  
SDISK for COCO 1 or 2

GCS File Transfer Utilities for CoCo	
Multi-Vue version	\$54.95
Standard version	\$44.95
Version 3.0 update - either version (provide disk number)	\$15.00

D. P. Johnson SDISK or SDISK3	\$29.95
L1 & L2 Utilities	\$75.00
Ask about FORTH09 (8809 & OSK)	

Standard diskettes are OS-9 format (\$25) - add \$2.50 for 3.5". Orders must be prepaid or C.O.D. VISA/MC accepted. Add \$1.75 S&H. C.O.D. is additional.

**GRANITE COMPUTER SYSTEMS**  
571 Center Road Hillsboro, NH 03244  
(603) 464 - 3850

OS-9 is a trademark of Microware Systems Corporation and Motorola Inc. MSDOS is a trademark of Microsoft Corp. FLEX is a trademark of TSG, Inc.

This command creates the file `big_fone` and merges the telephone numbers from the three specified files (family, business and friends) into this file. If `big_fone` already exists, the contents of the three source files are added to the end of its original contents.

**Append works nicely, but the program has grown into a multi-function utility that can also be used to replace the build and merge commands.**

Any type of file can be merged in this manner, including OS-9 memory modules. You can also use *Append* to merge data from a pipeline or by input re-direction. For example, to add the telephone numbers in a compressed file to your `fone` file use

```
OS9: expand old_fone | append
fone - ENTER
```

This example assumes you already have the `expand` utility on your system. The `expand` program enlarges the compressed file `old_fone` to the standard output path. This is piped to `append`, along with the destination file, `fone`. When used in place of the source filename, the hyphen (-) tells `append` to accept data from the standard input path without prompts and not to quit at a bare carriage return.

When using *Append* in a mode other than keyboard input, increase the size of the default 512-byte buffer by using the # command line modifier. This increases the speed of operation when appending large files.

```
OS9: append hugefile bigfile
largefile #40k ENTER
```

If you don't have the OS-9 assembler, enter and run the BASIC09 program in Listing 2 to generate the executable program. After a little experimentation, you'll find many uses for *Append*. □

```
chkloop   lda    ,x+           next parameter character

## Submitting Material To Rainbow

Contributions to THE RAINBOW are welcome from everyone. We like to run a variety of programs that are useful, helpful and fun for other CoCo owners.

**WHAT TO WRITE:** We are interested in what you want to tell our readers. We accept for consideration anything that is well-written and has a practical application for the Tandy Color Computer. If it interests you, it will probably interest lots of others. However, we vastly prefer articles with accompanying programs that can be entered and run. The more unique the idea, the more the appeal. We have a continuing need for short articles with short listings. These are especially appealing to our many beginners.

**FORMAT:** Program submissions must be on tape or disk, and it is best to make several saves, at least one of them in ASCII format. We're sorry, but we do not have time to key in programs and debug our typing errors. All programs should be supported by some editorial commentary explaining how the program works. We also prefer that editorial copy be included in ASCII format on the tape or disk, using any of the word processors currently available for the Color Computer. Also, please include a double-spaced printout of your editorial material and program listing. Do not send text in all capital letters; use upper- and lowercase.

**COMPENSATION:** We do pay for submissions, based on a number of criteria. Those wishing remuneration should *so state* when making submissions.

For the benefit of those wanting more detailed information on making submissions, please send a self-addressed, stamped envelope (SASE) to: Submission Guidelines, THE RAINBOW, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. We will send you comprehensive guidelines.

Please do not submit material currently submitted to another publication.

Game

CoCo 3

## Space Ace

*Space Ace* is an action-arcade game written for the 128K or 512K CoCo 3. Requirements for operation include a disk drive and a joystick. Although it looks acceptable on a color composite monitor, *Space Ace* looks great on an RGB monitor. The game is written in 100-percent machine language and has smooth Hi-Res graphics as well as fast action. It's supplied on a single, unprotected 5¼-inch disk and comes with three and a half pages of simple instructions. To begin playing, enter LOADM "X1":EXEC.

*Space Ace* is the story of a friendly computer turned bad. It all transpired during a period of several hundred years when the galactic master computer, Iravo, began creating robotic drone guards and mercenaries. You are *Space Ace*, a human dressed in a robot suit. This disguise was necessary to infiltrate the starbase and destroy Iravo. Iravo has successfully taken over all four galaxies whose inhabitants now live a fearful existence in slave colonies. As Ace, you must rescue these people. To accomplish this task, Ace has an Iravo Class-2 Scout spaceship with various weapons, and the knowledge to complete this very dangerous mission.

A countdown starts at 10 and decreases after the loss of every third life. If the countdown reaches zero, you must start over. These 30 lives seem generous, but you will soon discover this mission's complexity. On this mission you are confronted by drone guards, orbs and power orbs. Use the joystick to maneuver through the four zones in the starbase. (A self-centering joystick is highly recommended.) Each zone contains computer terminals and is divided into rooms. Walk to the edge of the screen to enter the next room. Rooms above or below the playing screen are accessible with elevator platforms.

Throughout the mission there are several screen options from which to choose. Scan searches your remaining orbs. This option can be used only from certain terminals. You must discover the exact terminals. Be warned, some orbs are deadly when scanned. Item selects the weapon you want activated. Call shows your score, number of lives left and power level. Quit resumes play.

Other items of interest include power

orbs, lasers and telepod keys to instantly go from zone to zone. A Super Jump command is also available for high jumps. The anti-explosion device prevents orb explosions during scanning. Be careful not to fall or jump into outer space. To win the game you must explore the entire starbase, find the needed orbs and gain access to the master computer. In addition to Pause and Continue features, *Space Ace* includes a Game Save so you can get some rest and resume play after a good night's sleep.

*Space Ace* is quality fun. It's full of unexpected thrills and situations that will leave you breathless. The graphics and sound effects are good, though game play is slowed down slightly when going from one room to another.

(Biware Enterprises, c/o Kandi Stinson, P.O. Box 265, Allen, OK 74825; \$20)

Utility

CoCo 3

## Scripteller

I was asked to review a new program for handwriting analysis. This was my chance to play graphologist and discover the hidden messages conveyed through handwriting. I chose to study my co-workers. What are these people really like? As the first of these analyses began, I was filled with anticipation as to what I would learn.

*Scripteller* is a program for handwriting analysis on the CoCo 3 with a disk drive. The program is easy to use and is designed to give a general psychological portrait of a person from a sample of their writing. The package includes an instruction manual that clearly states the directions for and purpose of this program. The claims made

in this manual are of limited greatness. The program claims to approach the accuracy of the expert graphologist, but cannot accept responsibility for inaccurate interpretations due to the possibility of inaccurate user responses.

To run the program, type RUN"S" and ENTER. It really is that simple. This program is perfect for the computer novice or the genius whose brain needs a vacation. The menu offers five options: analyze, load, save, interpret and quit. To analyze a handwriting sample, select Option 1 and answer the series of questions that follows. Examples of questions include the size, slant and width of the writing, the width of both left and right margins, space between lines of writing and the way the subject dots the i. When the analysis has ended, you are prompted to press ENTER to return to the menu. From here you can select any of the remaining options. To interpret the information, select Option 4. The results of the analysis can be viewed either on the screen or in printed form.

The interpretation lists the handwriting factors and the corresponding personality characteristics. These characteristics are generated from the answers given in the analysis and should vary based on these answers. I repeat, they *should* vary based on these answers. During my experimentation, some of these computer-generated characteristics remained the same regardless of the response to the corresponding question. I am also puzzled by the combined characteristics that appear at the end of the interpretation. In my analyses these characteristics varied in number from one to five. And, with my limited knowledge of graphology, seemed nothing more than randomly generated personality characteristics with little relationship to the preceding information.

Some of these interpretations, like "average in many ways" and "normalcy" are neither complimentary nor derogatory, but remain in a plane of unexplained ambiguity. Other interpretations such as "energetic and flexible," "polite" immediately followed by "selfish" and "sensuality, exaggeration" are contradictory groupings that further obstruct the view to one's personality. Based on my experience with this program, I recommend *Scripteller* be used strictly for entertainment and not as irrefutable evidence in a courtroom. I can see no application for this program beyond its capacity for limited entertainment.

*Scripteller* is not the re-invention of the

# PCM

The Premier Personal Computer Magazine for Tandy® Computer Users

Not only does Tandy produce our favorite CoCo, we think it produces the best portable and MS-DOS computers as well. We've found that when satisfied Color Computer users decide to add portability or MS-DOS to their computing habits, many stick with Tandy. For these people we publish PCM, The Premier Personal Computer Magazine for Tandy Computer Users.

Each month in PCM, you'll find information and programs for the Tandy 100, 102 and 200 portable computers. And you'll find even more coverage for Tandy's MS-DOS machines — from the graphics of the 1000 to the power of the 5000.

## PROGRAMS AND PROGRAM DISKS!

We learned from THE RAINBOW that readers want programs to type in, so each month we bring you an assortment of them: games, utilities, graphics, and home and business applications. For those who don't have time to type in listings, we offer a companion disk with all the programs from the magazine. Also included in PCM each month is the *Software Shopper*, an "onmail" database service from which you can order the latest shareware products from our Delphi databases for Tandy MS-DOS and PC users — even if you don't have a modem!

## TUTORIALS AND PRODUCT REVIEWS!

As if all this weren't enough, we offer regular tutorials on *DeskMate*, telecommunications and hardware; assembly language, BASIC and PASCAL programming tips; and in-depth reviews of the new software, peripherals and services as they are released. Add it all up and we think you'll find PCM to be the most informative and fun magazine for this market today!

**YES!** Please send me a one year (12 issues) subscription to PCM for only \$28.\* A savings of 22% off the newsstand price.

Software	CoCo 1, 2 & 3
----------	---------------

## T&D Software Issues #91 & #92

Are you a newcomer to the CoCo world, bright-eyed and full of curiosity about what this sleek machine is capable of? Or are you a seasoned CoCo user, thoroughly familiar with word processors and databases and perhaps even BASIC? No matter what your level of experience, there's a product from T&D Subscription Software that may add variety (and a few surprises) to your computing life.

Twelve times a year, T&D Subscription Software releases a disk and cassette filled with CoCo 1, 2 and 3 programs. Each disk/cassette provides a collection of different programs that offer everything from help for the CoCo user, to general instruction, to just plain fun.

Included are business and personal productivity programs, instructional tutorials, CoCo utilities, game puzzles, text and arcade-style games, as well as educational programs for children. All the subscription programs are original (i.e., none of them come from public domain software). Disks/cassettes may be ordered individually (all issues are still available), or you may sign up for a year's subscription that includes twelve disks, one per month, at a discount off the single-issue price.

While some T&D Subscription Software programs require a disk drive, the cassette tape issues still include these programs for users who may eventually upgrade to a disk drive. My review examines last year's first two disk issues: #91 (January 1990) and #92 (February 1990).

Each T&D Subscription Software disk comes labeled with a directory of its con-

tents and includes a page of instructions. T&D tells me that with each order it includes an additional page of instructions to help beginners get started. I found it easy to get the programs up and running as soon as I made disk back-up copies and safely stored the originals.

Both issues have 10 different programs, all written for the CoCo BASIC environment (none of the programs can be used directly under the OS-9 operating system). By typing RUN"DIR", you engage a directory utility program that comes with each T&D Subscription Software disk. This helpful program creates a listing of programs on disk, and it allows you to select and run programs with just a few keystrokes. With documentation in hand, I found it a simple matter to locate programs in the disk directory and relate them to their place in the instructions. The instructions include an explanatory paragraph for each program, with each paragraph labeled for quick reference. If you require further instructions, many programs include onscreen instructions that are viewed from within the program itself.

With all these programs before me, I had a difficult time deciding which one to run first. I ran a BASIC program called *Address It*. This is a menu-driven tutorial for the 32-column screen that addresses the question of addresses: What are the proper forms of addresses for 107 different public officials? The program contains eight pages of information accessible from a two page menu. Next I tried a BASIC game puzzle called *Solitaire*. This *Othello*-like puzzle involves strategically maneuvering around different colored chips on a grid. It is a simple but seductively challenging game. I then tried a personal productivity program, *Builder's Helper*, which allows you to add, subtract and multiply feet, inches and fractions of an inch.

Next I discovered somewhat more elaborate programs. For instance, *Business Starter* is a menu-driven program that assists you in creating and printing out a business plan; it even offers advice for seeking a bank loan. Another fancy program is a database for keeping track of a baseball card collection. In addition, I found a very educational tutorial that outlines the differences between IBM PC BASIC and CoCo BASIC. Among the games are several all-text, adventure-style games, plus a number of arcade-style games (including a Tom Mix creation called *Sky-Way*) that require quick reflexes.

Each program I tried is simple, to the point, and in all cases performs as advertised. The breakdown of the programs in my two issues went like this: With ten programs apiece, each disk averaged six games, two tutorials, one productivity aid and one CoCo utility. On the average, two

programs require a 128K CoCo 3, while many others require a minimum 32K to run. A joystick is required to play some of the games. In all cases documentation is very thorough regarding program requirements. While you need a CoCo 3 with an RGB monitor and disk drive to run *all* the programs to their fullest potential, for most programs, a tape-based 32K CoCo 1 with a television monitor is adequate.

Technically speaking, these two issues contain programs that are an even mix of routines written entirely in BASIC (DECB) and BASIC programs that use ML subroutines. Two of the programs are all machine language. Both disks have basically the same distribution of software, each containing programs for CoCo 1, 2 and 3.

Overall I am impressed with this software-subscription service. Most of the programs are short and simple, yet they are useful, entertaining and cleverly written. All the programs live up to a high level of quality and reliability — obviously they were carefully selected and reviewed by T&D Subscription Software prior to release. The documentation is well-written and to the point, with unwavering attention to important details.

Being basically satisfied with the whole T&D Subscription Software package, the only reservation I have is that some of these programs are so simple. I question their usefulness. One such program is a word/picture association quiz that displays PMODE drawings of various wild animals (at times hard to identify because of poor framing). You are to select the appropriate animal name. It isn't clear what age or skill level this quiz is targeted for.

Regarding the games, I think some (especially the arcade-style games) run intolerably slow and are hard to control accurately with a joystick. A few games ask at the beginning if you want the CoCo 3 high-speed poke, but even these are slow runners. Helpful features such as game pause and move cancel are often omitted, and none of the games are written to save scores to disk — a feature I find important for any game. Regarding programming, the

only flaw I found (and a minor one at that) is that some programs did not load properly from the DIR utility. (I simply loaded and ran them from BASIC.)

On the up side, T&D Subscription Software is a very rich resource for the budding BASIC programmer. Since many of the programs are written entirely in BASIC, they can be loaded and listed like any standard BASIC program. Here is an opportunity for the programming student to study the work of programming professionals (keeping in mind of course that no copyrighted program may be copied in whole or in part and resold without the author/copyrighter's permission).

Even with my limited programming abilities, I found it easy to reconfigure some of the BASIC programs for my CoCo 3, RGB system. I used the CoCo's built-in EDIT command to adjust a program's screen colors, and insert ON BREAK GOTOs and high-speed pokes where appropriate.

T&D Subscription Software offers a little something every month for everyone; however, don't expect to find elaborate, heavy-duty spreadsheets or complex, lightning-fast arcade games. This is definitely compact, single-purpose software territory. But at the very reasonable, non-subscrip-

tion price of \$8 per issue, you're bound to get more than your money's worth.

(T&D Subscription Software, 2490 Miles Standish Drive, Holland, MI 49424, 616-399-9648; \$8 per issue, \$70 for a one-year subscription)

— Walter Myers

Database

CoCo 1, 2 & 3

## Mailman

With the many advances in computer technology in the last few years, it is easy to lose sight of the more mundane tasks we can relegate to the computer. How many of us slave over handwritten addresses for greeting cards during the holiday season? *Mailman*, a mailing-list organizer from Johnson Software, is a no-frills workhorse that puts that task on the CoCo where it belongs.

Of course, addressing greeting cards is just one of many chores for *Mailman*. This type of program may be even more useful

to those with small businesses or organizing mailings for churches, clubs and other groups. Although the program is designed for mailing purposes, it incorporates a free-form database structure. You can use *Mailman* for many other filing tasks as well.

*Mailman* is a series of related programs that works on any CoCo with Extended BASIC, at least 32K RAM and a disk drive. As sold, the system is set up to run on a CoCo 3 with one drive and a printer set at 600 baud. Reconfigure the system for your CoCo setup by making simple changes to a BASIC driver program. These changes are well-documented in the 35-page manual that accompanies *Mailman*.

After running the driver program, you are greeted with a short menu. From here select options for Printer Output, File Management and Record Management.

The File Management menu allows you to add, delete and copy files. Use the Add option to create your own mailing list or database record forms. Each record in a file may contain up to 1530 characters. Once you have created the new file, pressing CLEAR takes you back to the main menu. CLEAR is *Mailman*'s hot key for breaking out of a function or returning to previous menus.

# Nine-Times

The first magazine devoted exclusively to OS-9!

Every other month you will receive a disk jam-packed with programs and articles all for OS-9.

Each issue contains: 9 helpful and useful programs to help build your OS-9 library • Instructions, examples, and samples of BasicOS procedures and subroutines to help with your own programs and your understanding of BasicOS • C programs and programming examples • Program reviews, Hints, Help columns, and informative articles to advance your knowledge of OS-9 • Supplied totally of 5.25" disk • Bound manual sent to each new subscriber for help in getting *Nine-Times* up and running, as well as tips on using it with a ram disk or hard disk • All graphic/joystick interface for ease of use.

**1-Year Subs, \$34.95** Canadian postage, add \$1.00  
Foreign postage, add \$7.00

**Back Issues:** Available for the May 1989 through September 1990 issues. Please write for information on Back Issue contents.

**Back Issue, ea. \$7.00** Foreign postage, add \$1.50 ea.

**Magazine Source:** Due to many inquiries, the source code for the magazine graphic shell is being provided as an informational tool. Included is the actual BasicOS source code and compiled modules on disk, as well as documentation and a printed copy of the source code.

**Source, \$24.95** Foreign postage, add \$1.50

To order, please send U.S. check or money order to:

10am - 6pm PST

To add data to a created file, select the Record Management option. A new menu appears with options to add, order (sort), scroll through, delete and insert records. You can also fetch a single record from a file for reference or editing.

The Add, Edit and Insert modes bring up a free-form screen on which you enter the data. This full-screen editor works well as an input device. I did, however, find the omission of an editing Insert function a little disappointing.

*Mailman* allows you to sort records alphabetically, by postal ZIP code or by date. When sorting alphabetically, the program starts at the first character of each record and moves on. When sorting by ZIP code, or a user-defined five-digit sorting code, *Mailman* first goes to the end of the record. It then searches backward for the first complete five-digit number, which it uses to sort. Since the free-form records don't use traditional fields, you must take care that the ZIP code, or other sort number, is the last five-digit number in each record. This is limiting in some cases and desirable in others. However, an obvious drawback to this arrangement is that Canadian addresses cannot be sorted correctly by ZIP code. Nine-digit extended U.S. ZIP codes work fine except that the last four digits are not sorted correctly. Because of the methods used and the limitations of BASIC, sorting speed is not impressive. It took four minutes to sort a file of 69 records.

While *Mailman* can otherwise manipulate larger files, the sort routine handles a maximum of 1500 records, which should be more than adequate for most home uses. Users who need to store a larger number of records can easily circumvent this by splitting mailing lists or databases into logical groups of records.

*Mailman's* printing capabilities are excellent. Since the system doesn't use special control codes, most any printer can be used for output. The Repeating Record feature allows you to enter a single record to be printed along with each record from a file. This practical feature is great for printing a return address on labels.

Other print features include right justification and left margin adjustments, multiple prints and the ability to print all, or a limited range, of records. You can also set the top-of-form code, which is the number of printed lines to put on a given form. If you are printing on six-line labels, you should be able to enter 6 for this value. (A standard page allows 66 lines.) Unfortunately, due to what I believe is an error in logic, I had to enter 7 to print on six-line labels and 13 for 12-line labels. A quick program change should be all that is necessary to eliminate this problem.

The Print At Record Entry (PARE) feature allows you to print a record (and a repeating record, if desired) when the record is entered into the file. This eliminates the need to call *Mailman's* Printer Output menu separately. Those in a product-oriented business will find this time-saver quite handy.

All in all, I was impressed by *Mailman's* capabilities. The manual includes an excellent tutorial, as well as technical information on all features. I encountered no bugs or problems other than the previously mentioned top-of-form inaccuracy.

*Mailman* isn't flashy and uses no special effects. It just does the job it was designed to do; make life, or work, a little easier for its users.

(Johnson Software, P.O. Box 92, Dayton, OH 45449; 513-866-2601; \$23.95 plus \$2.50 S/H)

—Cray Augsburg

Music

CoCo 3

## SoundTrax

There are many CoCo music programs on the market. Several of these programs require a MIDI-compatible keyboard to enhance sound quality. Some of the music programs not requiring a MIDI interface lack exciting instrumentation. Sundog Systems is working to fill this void with a new product called *SoundTrax*.

*SoundTrax* is a sound-sequencing system for the CoCo 3. With a CoCo 3, a disk drive and a mouse or joystick, you can create lively compositions.

*SoundTrax* boots from any drive. The program features a graphics user interface (GUI) consisting of five pull-down menus, a four-track composition field, measure and block boxes, two keyboards with voice display boxes, a play mode indicator and a metronome box.

First, load the voices into memory. A

variety of voices are available for use from the flip side of the *SoundTrax* program disk. Select the appropriate voices and load them individually using the Load Voice option in the File pull-down menu. After loading all necessary voices, you can select Save Config. If the config file is named DEFAULT.CFG, the selected voices will be loaded every time you boot *SoundTrax*. This option saves a lot of time.

With a 512K system it's possible to load all of the supplied voices into memory. Memory limitations prevent operation of this feature with a 128K computer. Save needed voices with the above-mentioned Config option. When you select a song to play, all the voices needed to recreate the song are automatically loaded. If the voices can't be found on the default drive, you'll be prompted to change to the drive where these voices reside or you can insert the voice disk into the default drive and click on the drive number.

You are probably wondering how to create music with this program. *SoundTrax* is a four-track recording environment. Two voices can be recorded at once to the same track or to separate tracks. Pick an instrument voice from the upper keyboard and one from the lower keyboard. These keyboards have preassigned keys, each spanning one full octave. Notes from either can be played on the CoCo keyboard.

After selecting a block, length of measures and the destination track numbers for both upper and lower keyboards, the music entered on your CoCo keyboard is recorded. Choose a time signature. Also, a metronome keeps the beat in accordance with the tempo.

I started a back beat with a rock-snare drum and bass guitar. The drums were recorded to Track 1 and the bass guitar to Track 2. I then merged both tracks to Track 1. Erasure of Track 2 allows for the recording of a new voice. By merging tracks it becomes possible to have many voices (polyphonic) in one song.

Selecting new voices for the keyboards allows for more voices in your recording. Supplied on disk are voices for piano, guitar, bass, horn, drums, wind instruments and many other useful sounds. The sound quality of these voices is much better than I expected. More instrument sample disks are available from Sundog Systems. Sample these voices by loading them into the keyboards and selecting Playthrough from the Options menu.

*SoundTrax* supports files created with *Studio Works* and interpolates the rate automatically. It can also read sounds from other sources as long as the files are no larger than 16K.

Your recording is displayed in a compo-

sition field containing all four tracks. Music is represented by broken lines in the associated tracks. It requires adjustment to read music in this format rather than the usual staff. Writing music with *SoundTrax* reminded me of past experiences programming drum machines. Programming is done mostly by ear and not by sight. You can see where music is located, but not the specific notes being played. Once familiar with the layout, though, things run smoothly.

Recording every track to perfection is difficult; at least it was for me. There are editing commands to reshape your compositions. Block editing commands include Copy, Paste, Erase, Add, Set and Cut Block. Add lets you add measures to an existing score. Track editing commands include Merge, Erase, Copy and Sync. Sync will try to put a track in closer synchronization with the metronome. It's advisable to copy the block to the clipboard before editing to ensure that all is not lost if the results of a new mix are not acceptable. The manual provides a tutorial to get you started.

*SoundTrax* is very entertaining. If you're not in the market to purchase a MIDI keyboard to use in conjunction with a CoCo music program, give *SoundTrax* consideration. The price is affordable for most CoCo users. Here's another outlet for your

creativity on those cold winter nights. Maestro, music please.

(Sundog Systems, P.O. Box 766, Manassas, VA 22111, 703-330-8989; \$34.95 plus \$2.50 S/H)

Utility 512K

CoCo 3

## 512K Copy Utility

Are your fingers sore from copying files to a new disk? Tired of waiting for a backup to finish? Have you ever wondered if there's a faster way to format disks? With *512K Copy Utility* from Carl England you can spend more time using programs, rather than wasting all day moving them.

If you use BASIC's COPY command to transfer files to new disks, then you routinely type source filename and destination filename. Moving one file at a time is tedious work. *512K Copy Utility* allows tagging of multiple files resulting in quicker transfers.

A configuration program is provided so you can set default parameters for this

utility. Defaults can also be changed from within the main program.

Select a source drive by pressing S and then 0, 1, 2 or 3 accordingly. Do the same for the destination drive by pressing D and a drive number. Pressing the space bar on the desired file places an asterisk in front of the filename. Use the arrow keys and move the on-screen cursor to mark additional files. Pressing ENTER executes the copying. Options also exist for copying all files and copying all files except tagged files. Files are loaded into RAM prior to being copied. Single-drive users are given a prompt to swap disks.

*512K Copy Utility* alleviates typing of file names. When files need to be renamed, pressing R allows you to change selected characters positioned above the cursor in an existing filename.

A word of caution: This utility allows copying of identical filenames to the destination disk. Identical filenames should be changed so that BASIC can distinguish between them.

Copying between different track drives is no problem. The destination drive can be set for 35, 36, 40 or 80 tracks. It isn't necessary to set the number of tracks for the source drive.

You can kill files by pressing K and

Now available for \$399.95+s&h.  
Order or receive a free demo disk  
write: NMSA, P.O. BOX 1718,  
Merrimack, NH 03054

format disks by pressing F. Safety prompts confirm these commands before they are executed. Formatting disks using *512K Copy Utility* is 25 percent faster than with *DSKINI*.

The commands for this program are easy to remember. There is hardly any learning curve to speak of. One minor option is not listed in the manual. After you load the self-executing machine-language file, a command-options page appears. Pressing any key exits this page and your source directory appears on screen. Pressing the Reset button returns you to the options page.

These utilities are fast and easy to use. They are convenient for those wanting to re-organize their disk libraries. The price makes this package a real bargain.

(Carl England, 128 Sheperd Dr. N.E., Calhoun, GA 30701, 404-629-7197; \$15)

— Tony Olive

Game	CoCo 3
------	--------

## Spell Master

*Spell Master* will be a great disappointment to those of you looking for a good program to check and correct spelling errors. But, if you are bored since cracking the Chinese Military Code during the Beijing freedom uprising or spend your free time deciphering bar codes in supermarkets, then *Spell Master* is for you.

For \$18 you get a non copy-protected disk and half a page of booting hints. A CoCo 3 with at least 128K, a disk drive, a joystick as well as an infinite amount of wit and patience are not included in the package, but are required for the adventurer to gain admittance to the Plane of Non-Existence in this graphics adventure.

Unlike most adventures, you can't buy, borrow or steal weapons to defend yourself from monsters waiting in the dungeons. Your only chance for survival is to cast magic spells that may or may not protect

you from these monsters. To make things more challenging for those blessed with inordinate memory, keep in mind that while all invisible monsters look alike, their characteristics are different. Therefore, the

successful defeat of one monster with a spell, does not necessarily mean the defeat of all monsters with that same spell. But don't despair, there are supposedly 100,000,000 attack spells and an equal number of defense spells to help in your quest. This reviewer did not check to see if the count was accurate.

The object of the game is to battle against an infinite number of nasty, disgusting, obnoxious and not very nice monsters and navigate through 10 levels to become a Spell Master.

Before the game begins, the program generates a game file that is different each time. You will be prompted to enter a complexity factor between one and nine. The higher the complexity factor, the more complicated the maze and the more vicious the numerous monsters will be.

You can choose the characteristics of your adventurer. Since you will undoubtedly die many deaths before even finishing the first level, you can create nine different characters and mazes to store in a file. Once this is done, the game screen appears. The screen consists of a 3-D view from your character's perspective as well as an overhead view of the maze. The walls of the maze appear only as your character travels along them, so finding the exit is not an easy task.

The only thing left is to create your spells. All movement, including the creation and casting of spells, is accomplished by joystick. Just move the cursor to the desired icon and press the fire button. There are nine spells at your command. These can be changed as often as necessary. Each spell has eight categories and an attack/defense switch. Mix various doses of Fire, Ice, Air, Water, Earth, Life, Movement and

Senses to customize the aforementioned 100,000,000 spells. The successful adventurer is he who can keep track of which spell is effective against which creatures. It is advisable to have paper and pencil at hand.

The game is very complex and comes with an instruction file that can be loaded and printed with any word processor. Even with the instructions, the novice adventurer will find *Spell Master* trying and frustrating. It is especially frustrating to re-boot the game after the death of each character. The game would be more enjoyable if the first couple of levels were less complicated and the character had more lives. But for the avid, hard-nosed, die-hard adventurer, *Spell Master* is a nice addition to the software library.

(Daniel Tuttle, 325 Hillsown Road, Manchester, CT 06040, 203-643-1072; \$18)

Graphics	CoCo 3
----------	--------

## NFL Helmets Scrapbook

*NFL Helmets Scrapbook* is a display of all 28 helmets found in professional football. The program is conveniently broken into six picture files, each representing one division; the NFL East, West and Central, as well as the AFL East, West and Central are all represented. A CoCo 3, CoCo Max III and a joystick, or mouse, are needed to view the images. A printer is also required if you want a hardcopy of a sketch on the monitor.

For those who are unfamiliar with the *CoCoMaxIII* program, it allows sections of an existing picture to be cut, edited, moved and saved as a scrapbook page in order to be pasted into another graphics screen. *NFL Helmets Scrapbook* displays four or five helmets per screen from which any one, or all, can be cut out and inserted in a graphics design of your own creation.

The *NFL Helmets Scrapbook* disk comes with a one-page manual that adequately describes the step-by-step procedures of how to load, cut, paste and move a picture. The manual also has another page that displays all 28 helmets. You can identify the different team helmets even though the finer details are lacking.

Although the documentation does not suggest any applications for this program, we were able to create some suggestions for our own use. One idea is to use a

# The New Generation of **Star** Printers

**7 Color  
Printer!**

## RAINBOW NX-1020

This next generation color printer sets new standards in color printer performance... 225 cps, 4 NLQ fonts including Script, plus a new high speed draft font; but the enhancements don't stop there. Add a 16k buffer, a special quiet mode, top feed, bottom and rear tractor, and the list goes on. Seven on-demand colors, 8 color graphics modes, Epson and IBM emulation for maximum software compatibility. Virtually everything desired in a printer is here - *speed, color and versatility* at an affordable price with a 2 year warranty.

Utility

CoCo 1, 2 & 3

## StarPic

*StarPic Picture Utility* claims to be a total PMODE4, picture-printing program designed for use with the Star NX-1000 dot-matrix printers. These claims might be true, but the first impressions can be very different.

This utility comes on a single disk with

a one-sheet manual. It contains an upgrade addendum for Version 2.3 that addresses *StarPic Picture Utility*, *DMP Picture Utility* and *GEM Picture Utility*. The upgrade addendum is on a separate sheet, which destroys the manual's continuity.

*StarPic* works on any CoCo with 64K RAM and a disk drive. According to the manual, the program uses the right joystick for choosing pictures. The manual fails to clearly state that the joystick is mandatory. You cannot use the program without a joystick. I suggest using a free-floating joystick rather than a self-centering one.

The interface is similar to a Macintosh graphics user interface. Move the cursor with the right joystick to select from a list of pictures or activate pull-down menus to choose different options.

When loading, *StarPic* checks the disk for picture files with the extension of .MAX and lists them in the file window. Files without a .MAX extension are not recognized by *StarPic*. Save your home-brew PMODE4 pictures on disk from \$E00 to \$25FF with an extension of .MAX. Double-screen pictures need to be saved from \$E00 to \$3DFF.

No mention of how to save a file is made in the manual until the second

page, fourth paragraph, under a note about the error message for an off-line printer. As a computer support specialist I have found that the easier the interface, the less a user must know about getting the program running. And the easier it is to work. It would be great if *StarPic* would allow you to save that screen to disk with a user-specified filename by tagging on it the needed .MAX extension. A section of the manual should be dedicated to explaining what a user needs to know about saving and loading PMODE4 files in BASIC.

The program does give an example of how to make a double-screen picture one screen long. To do this, load the picture from disk with LOADM "filename.MAX", then resave the file with SAVEM "filename.MAX", &H0E00, &H25FF, &H027. Why not tell the user that he can use that same SAVEM command to save a PMODE4 screen in memory to disk? I wish program authors would remember the novice when writing their programs.

*StarPic* has three pull-down menus (Disk, Baud and Goodies) across the top of the main screen displaying the available picture files. At the bottom of the screen, a Help bar hints at the required action or presents messages such as Select File, Loading Filename or Select Menu Item. Place the cursor over the filename you want to load and press the fire button. The Help bar displays Loading Filename and the picture appears on screen. If you attempt to load a picture that was originally saved in the wrong format, you receive an error message.

The Disk menu allows you to select the default drive (0, 1, 2 or 3). You can place the program in Drive 0 with its demo files and a second disk of picture files in Drive 1. The New Disk choice allows you to read a new disk you have put into the active drive. Use the Drive=x choice to set the destination drive for disk saves. The menu indicates the active picture and destination drive by placing (=) next to the drive listings. There is also an About selection that displays the title screen. The menus show inactive choices in gray. The Disk menu grays two file choices, Compress and Save Pic, until a file is loaded.

Compress saves the loaded picture in a compressed format with a .CMX extension. This allows the file to take up less disk space. This mode works only with *StarPic*. One warning, *StarPic* will acknowledge only the first 36 pictures on a disk. Any files above that number will not appear in the menu. Save Pic saves the loaded picture in a non-compressed format. Quit exits the program.

The second pull-down menu is Baud. This menu allows you to change the baud to

600, 1200, 2400, 4800 or 9600. Again, an equals sign (=) shows which choice is active.

Goodies is the last pull-down menu, and it allows you to play with the loaded picture. If you have loaded a double-screen picture, use the joystick to scroll around to view the entire screen. Show Page views the present file. You can exit the picture view by pressing the fire button and select Change Mode from the menu or press the space bar to toggle the picture between four graphics modes. For the CoCo 3, the author set up the palettes to simulate the older CoCos' four-color artifact mode in modes 3 and 4.

Com Picture, or pressing Enter in the view screen, complements the picture. This actually makes all the pixels on the screen change. In other words, this inverts the picture. Black changes to white and blue changes to red, etc. You can choose Swap Colors from the menu to swap red and blue, while leaving black and white the same. This choice seems to do the same thing as the Change Mode/space bar except the colors change in a painting movement. You can also activate this feature by pressing S.

Hor Flip and Vert Flip menu selections rotate the picture 180 degrees horizontally and vertically, respectively. You can flip the picture while viewing by pressing H or

V. These functions work only on single-screen pictures — the choices will be gray on the menu when a double-screen picture is loaded. The Mirror Flip menu selection works on either single- or double-screen pictures. This function does a horizontal flip which is handy for T-shirt transfers. Pressing M while viewing also activates this function. The manual states Mirror Flip is for black & white pictures only. It functions on color pictures in the same way as the Hor Flip, but the colors are reversed as if you had pressed the space bar.

The next two menu selections control Walk Around, an automatic slide show. Choosing Walk Around cycles through each file on disk, flashing the picture on screen for the amount of time specified by Walk time=x. In this function X equals the number of seconds each file will be viewed during Walk Around; a value of 0 translates to about 1 second and a value of 9 is 22 seconds.

The last two menu items are the printing utility functions. Small Print produces a 3" by 3" copy of the picture. Double-screen pictures are printed automatically without any paper alignment. Small print makes some nice, high-quality pictures very quickly. The Large Print selection first checks for double screen pictures. A double-

screen picture is printed on a full sheet in portrait (upright) mode, while a single-screen picture fills a full sheet in landscape (sideways) mode. Both printing functions check and notify you if your printer is off-line. Once printing has started, the only way to abort is by turning off the CoCo.

StarPic can be used on all CoCos but does not take advantage of the CoCo 3's enhanced graphics capabilities.

The program uses the Star NX-1000 dot-matrix printer and allows you to see four colors on screen: blue, red, white and black. But it does not translate these colors for screen dumps. StarPic is a black and white screen dump program for PMODE4 screens.

The program lives up to its claims. Once the picture is on disk in the correct format, it is easy to load and print. You can flip the picture and print it reduced or on a full page. StarPic is of no use to a CoCo 3 owner working exclusively with Hi-Res graphics. If you own an NX-1000 and a CoCo, and don't need to work with the CoCo 3's enhanced graphics, StarPic should be all you will ever need.

(Second City Software, P.O. Box 72956, Roselle, IL 60172, 312-653-5610; \$19.95)

**La Belle Lucie**, a solitaire card game sometimes known as "Three Shuffles and a Cheat." The entire pack of cards is used in the initial setup by setting all cards face up in overlapping trios. Cards are played onto the tableau in descending order within the same suit. The object of the game is to get all 52 cards onto the foundation. You have three deals in order to accomplish this. The game features full-color graphics. Requires a CoCo 3, a disk drive and a joystick or mouse. *Eversoft Games Ltd., P.O. Box 3354, Arlington, WA 98223, (206) 653-3263; \$14.95 plus \$2 S/H.*

**Level II Tools**, a set of 25 utilities that are useful in the day-to-day usage of OS-9 Level II. Commands are included for wild cards, directory structures, command files, pipe filters, utilities, color manipulation, and window handling. Requires OS-9 Level II. *Alphus Software Technologies, 210 Bluefield Drive, Shidell, LA 70458, (601) 688-3140; \$24.95 plus \$3 S/H.*

**File Recovery System**, restores "lost" OS-9 files and directories by rebuilding their directory entries or file descriptor sectors. Works on any type of OS-9 disk including RAM disks, floppy disk, and hard disks. Command line options allow *Recover* to display file recovery actions without actually modifying the disk. Requires OS-9 Level I or Level II with at least 24K of free memory and one drive. *Burke & Burke, P.O. Box 733, Maple Valley, WA 98048, (800) 237-2409; \$24.95 plus min. \$3 S/H US, min. \$4 S/H Can.*

**CoCo Archiver**, a disk file manager and archiver for Disk BASIC. Lists archive files with descriptive memos. Copies, kills, and renames files. Includes a help screen. Shareware feature provided for BBS use. *Danosoft, P.O. Box 124, Station A, Mississauga, LS4 2Z7 ONT, (416) 897-0121; \$17.95 US; \$20.80 Can., plus \$2.50 S/H, Ontario Residents add 8% Tax.*

**Graphics Utility**, a tutorial on how to store multiple Hi-Res graphics screens in CoCo 3 memory for instant recall and how to save and load them from disk. Requires a CoCo 3. Numerous remarks in program listing to understand routines used. *Danosoft, P.O. Box 124, Station A, Mississauga, LS4 2Z7 ONT, (416) 897-0121; \$8.95 US; \$10.50 Can., plus \$2.50 S/H, Ontario Residents add 8% Tax.*

**Funstats**, a general statistics program for a CoCo 1, 2 or 3 with at least 32K. Fifty different statistical programs are contained in this package. Just enter numbers and the computer calculates the statistics. You should have some knowledge of statistical formulas. *Trading Post, P.O. Box 3453, Carbondale, IL 62902-3453, (618) 457-5258; \$39.95 plus \$3 S/H.*

**CoCo Calculator**, converts your computer into a calculator. Use it for addition, subtraction, multiplication, division, square roots, powers, rates and percentages. Has seven memory banks for the storage of constants and intermediate results. Additional features include a counter and commands for the setting and rounding of decimal places. Requires 16K of

memory. For the CoCo 1, 2 or 3. *Trading Post, P.O. Box 3453, Carbondale, IL 62902-3453, (618) 457-5258; \$14.95 plus \$3 S/H.*

**CaCo Labels**, creates a double-column, multi-page screen index. Printout one, all or many copies of the same label. Print each line in a different font using a Tandy printer. Requires 32K. *Trading Post, P.O. Box 3453, Carbondale, IL 62902-3453, (618) 457-5258; \$29.95 plus \$3 S/H.*

**Bankman**, menu-driven program for continuously updating your checkbook. Allows you to keep a running record of deposits, checks and accounts. Files can be saved edited and printed. Lets you reconcile and analyze particular accounts. Requires 32K CoCo 1, 2 or 3. *Trading Post, P.O. Box 3453, Carbondale, IL 62902-3453, (618) 457-5258; \$39.95 plus \$3 S/H.*

**Brainbusters Test Writer**, Design multiple-choice and true/false questions. Allows you to edit, save, load, select, display, randomize and print. Includes utilities for making a cover sheet, answer key and instructions. Requires 32K. *Trading Post, P.O. Box 3453, Carbondale, IL 62902-3453, (618) 457-5258; \$39.95 plus \$3 S/H.*

**Brainbuster Examiner**, permits Brainbuster quizzes to be taken onscreen rather than in written form. For classroom, home or office. Requires 32K. *Trading Post, P.O. Box 3453, Carbondale, IL 62902-3453, (618) 457-5258; \$24.95 plus \$3 S/H.*

**Trivia Quizzes**, preconstructed data files for use with the Brainbuster Test Writer or Examiner programs. Four separate quizzes are available. *Trading Post, P.O. Box 3453, Carbondale, IL 62902-3453, (618) 457-5258; 25 questions \$5.50, 50 questions \$10.95 plus \$3 S/H.*

**Diskette File Protector**, this copy-protection scheme changes the filename extension to protect files from being run or killed. Protected filenames must be unprotected prior to being run or executed. Programs allows for tagging of multiple filenames. Requires a CoCo 3 and one disk drive. *Datatech Micro Systems, 4612 Arden, Lansing, MI 48917; \$10 plus \$2.50 S/H.*

**Mixed Blessings**, a collection of 23 programs. Includes a random-maze generator, an address-storage/retrieval system, several games, utilities, and a two-player chess simulation. All programs compatible with the CoCo 2, most will run on a tape-based system. *John Friedrich, Grove City College, Box 1877, Grove City, PA 16127, (412) 458-3088 or (412) 224-4194; \$17.95, specify tape or disk.*

**BED**, binary editor for disk. Helps fix disk problems. It reads any sector and displays, edits, and writes it to disk. It also searches disks for bad sectors. *Soft & Friendly, 129 Prairie, Verdun, IL 62690, (217) 963-4199; \$14.95 plus \$2.95 S/H.*

**CC3FAX**, this program allows you to receive FAX transmissions. Requires a 512K CoCo 3, 40-track DSDD Drive 0 and a shortwave receiver capable of SSB (single-sideband) or CW (morse code) reception. It is now possible to see the entire 368K picture on a 256-by-225 screen as a 1/64 size image; resolution 1/8 horizontal by 1/8 vertical. Additional print drivers are being added to the program. *Robert Gault, 832 N. Renaud, Grosse Pointe Woods, MI 48236; \$29 plus min \$4 S/H.*

**Smartwatch Drivers**, these drivers are for the CoCo 3 only. They make the functions of the SmartWatch (sold by Tandy and other sources in the RAINBOW) available to the standard Tandy Disk BASIC 1.0 and 1.1 systems. The 12- or 24-hour format can be selected. Also included is a driver for *Ultimate* modem communications program. *Robert Gault, 832 N. Renaud, Grosse Pointe Woods, MI 48236; \$12 plus min \$4 S/H.*

**CEBBS Online Programs**, a collection of programs to provide operators of CEBBS with a variety of games and support files to enhance their BBS. Programs include craps, blackjack, hangman, a voting booth, drive configuration for support files, an editor for maintenance functions, an auto-alphabetizing BBS lister, a place for messages, and a personal-profile database program. *KB Enterprises, 435 Brightwaters Drive, Cocoa Beach, FL 32931, (407) 799-3253; \$15.95 plus \$3 S/H.*

First product received from this company

The Seal of Certification is open to all manufacturers of products for the Tandy Color Computer, regardless of whether they advertise in THE RAINBOW.

By awarding a Seal, the magazine certifies the program does exist — that we have examined it and have a sample copy — but this does not constitute any guarantee of satisfaction. As soon as possible, these hardware or software items will be forwarded to THE RAINBOW reviewers for evaluation.

# Pie Plotter

*In search  
of a better slice . . .*

by Eric A. Wolf

**P**ie Plotter allows Color Computer 3 users to draw multi-color pie graphs from raw data. The program runs with either an RGB or composite monitor and requires a disk drive for loading and saving graphs. The program uses the high-speed mode and the 320-by-192, 16-color high-resolution screen for graphics. You can enter up to 14 separate data samples and the program graphs them in their own colors (with labels and percentages) for visually pleasing graphics results. *Pie Plotter* makes the task of designing pie graphs easier for the beginner as well as the advanced user.

## Operating Instructions

Enter the program from Listing 1 and save it to disk. Then enter RUN to start the program. The Settings control menu appears on the screen with blank graph data listed. This is where you conduct most of your work. The yellow text is the data and the green line at the bottom is your current title for the graph data. The gray text at the right of the screen has commands that alter or display this data. These selections are explained below.

**Shadow Graph** — Pressing S toggles this choice between Yes and No. If you choose Yes, the graph will have a gray shadow behind it. If you choose No, there will be no shadow.

**Modify Entry** — Pressing M allows you to change data in one of the 14 data slots in the yellow data column. Enter the number of the slot you want to modify (1-14) or enter 99 to exit this process. After entering the appropriate slot number, enter the modified data. Numbers 0-9999 are accepted. Next, enter the label that goes with this data. The new data is placed in the data column accordingly.

*Eric Wolf is a sophomore at LaSalle High School. He has been writing computer software for several years now and is the author of The Newspaper desktop publishing system. He can be contacted at 1630 N. Johnson Street, South Bend, IN 46628.*

**Plot Chart**— Press P to plot the entered data as a circular pie chart. The screen clears and the graph is drawn along with percentages, labels and the graph title. After the graph is drawn, press any key to return. *Pie Plotter* plots the graph according to the relation of a specific number to other numbers in the total data table. The sin and cos mathematical functions are used for line placement.

**Input/Output**— Pressing I takes you to the Input/Output control menu. From here you can save, load, clear and display your graphs, as well as perform the functions listed below. To activate a function, just press the number associated with it on the I/O control menu.

**Clear**— clears the graph currently in memory.

**Load**— allows you to load a previously saved graph from disk. Enter the filename or DIR for a disk directory. The graph is displayed. Press a key to continue.

**Save**— enables you to save a graph in memory to disk. Enter the filename you want the data saved with, or enter DIR for a disk directory. After the graph is saved, you are returned to the I/O menu.

**Display**— draws the currently defined chart. See Plot Chart for more information.

**Demographics To Screen**— prints the demographics of the data to the screen. This includes chart titles, percentages, labels and units for the data in memory. This function also displays the amount of data accounted for in the graph. Press any key to continue.

**Demographics To Printer**— identical to the Demographics To Screen option except the results are sent to the printer.

**Exit**— return to the Control Editor.

**Clear Graph Data**— Pressing C clears the current data. You are asked if this data is actually to be cleared. Enter Y to clear the data or N to abort the clearing process.

**Degree of Rotation**— This number signifies the degree at which the first line of the graph is to be drawn. Pressing D increases this number by two degrees. The degree of rotation is usually 0, but other values will tilt your graph for added effects.

**Title**— Pressing T allows you to enter a new title for your graph. Type the new title and press enter. A title can be only about 30 characters long. The title appears at the top of the screen when the chart is displayed.

## Monitor Selection

Due to video hardware differences of CoCo 3s, you must tell the program what type of monitor you are using. To do this, modify Variable MN as indicated in Line 10.

If you are using an RGB monitor, leave the value at 0 (zero). If you are using a composite monitor, set the value to 1.

## Sample Session

To begin, imagine you are writing a report on how people spend their weekends. You have surveyed several groups of various ages and have received 487 responses. Now you need a way to effectively communicate this information to readers. Use *Pie Plotter* to perform this task. You can easily plot a pie graph to better show this information.

Through the study you have determined that 120 people spend their weekends shopping. So, press M to modify a slot in your graph. Next, enter 1 to select the first blank in the graph. Enter 120 to indicate the data value for this slot. And enter SHOPPING, the label that goes with this slot.

In the survey you found 54 people like to travel on the weekend. Again, press M and enter 2 to alter the second data slot. Enter 54 to signify the number of people and then enter TRAVEL for the label.

You also found 87 people who go to the beach on the weekend. Press M and enter 3. Enter 87 for the number of people and AT BEACH for the label.

A majority of your survey, 98 people like to stay home all weekend and watch TV or work around the house. Press M and enter 4 for the fourth slot. Enter 98 for this group and label them STAYS HOME.

There is a group of people who work on the weekend. Press M and enter 5. Now enter the number 90 and label this group WORK.

To round out your survey, there are 38 people who don't fit into any specific category and need to be placed in a miscellaneous category. Press M and enter 6 for Slot 6. Now enter the number 38 and the label MISC.

To title your graph, press T and enter WHAT PEOPLE DO ON A WEEKEND. Your graph is now complete. To view the graph, press P. Press any key to return. This should help you get started. Have fun and happy pie graphing. □

## Novices Niche

### Directory Lister by Mike Moore

*Dirlist* sends the directory listing of a disk to the printer. The output is neatly listed in a two-column format. The advantage is that you can then cut out the listing and keep it in the jacket of the disk. This helps when searching for files stored on your disks.

When the program is run, you are asked for the disk name. This information is printed at the top of the listing to identify the disk being used. The number of free granules remaining on the disk is given next, followed by a listing of all the files on the disk in a format similar to DIR.

The only preparations for this utility are to make sure there is a disk in Drive 0 and the printer is online.

#### The Listing: DIRLIST

# Intercom

An important link in the CoCo community is its ability to communicate with fellow users. If questions arise, a fresh source of information can be invaluable. We here at THE RAINBOW have decided to create "Intercom," an information exchange point for Pen Pals, CoCo Clubs and BBSs.

If you would like a Pen Pal or are running a CoCo Club or BBS, send us a letter including the information listed here to: The Rainbow Intercom, P.O. Box 385, Prospect, KY 40059.

Only those parties who have signed our non-piracy "agreement form" appear in listings of Intercom. Also, please notify us if you want to add or delete any names on this list.

## PEN PALS

I'm 16 years old. I bought a CoCo 3 last June and I've had a CoCo 2 since 1985. I live in Missoula, Montana and feel quite alone with my CoCo in this area. I've found no support anywhere nearby. I have not even met anyone who has a CoCo! I have lots of technical questions. Will someone continually write and expect letters from me. I need a Pen Pal who will help me. Also, I will help you, so please write,

Michael J. Miller  
RR2 Moccasin Meadows  
Missoula, MT 59802

I'm interested in finding some local support for our CoCo. I haven't been able to locate a CoCo club in the Indianapolis area. If you have an existing club in the area or might like to start a new one please contact me at the address below.

Ted Mathues  
502 Shelby St.  
Shelbyville, IN 46176

I'm trying to start a new CoCo club for the Houston, Texas area. If you would like to join or have some helpful advice please write,

Art Volz  
16218 Brinkwood Drive  
Houston, TX 77090

## CoCo CLUBS

### ARIZONA

Tucson Color Computer Club, Bruce Smith, 3031 Mustang Drive, Tucson, 85708, (602) 747-7859

### CALIFORNIA

Citrus Color Computer Club, Orville Beaver, P.O. Box 6991, San Bernardino, 92412-6991, (714) 685-6334

The Sacramento CoCo Club, William W. Drennon, 2444 Wurth Ct., Sacramento, 95825, (916) 486-9665, BBS (916) 486-1594

### COLORADO

Colorado Springs Color Computer Club, Bud Ward,

1118 Claiborne Road, Colorado Springs, 80906-5513, (719) 392-8268

### CONNECTICUT

South Eastern Connecticut Color Computer Users Group, Larry Donovan, 25 Stony Brook Road, Sturington, 06378, (203) 535-4211

### FLORIDA

Cross-Country Color Computer Club, Tom Tittle, 860 Gardenia Drive, Royal Palm Beach, 33411, (407) 798-3726

### GEORGIA

Macon-Warner Robins Color Computer Users Group, Francis G. Wygert, 904 2nd Avenue, Robins AFB, 31098, (912) 328-7859

### IDAHO

Snake River Color Computer Club, Emil Franklin, 1750 Carmel Drive, Idaho Falls, 83403, (208) 522-0220

### ILLINOIS

CoCo Users Group, c/o Greg Adams, 224 Park Drive, Sterling, 61081-3033, (815) 626-4962

### KANSAS

The Kansas City Color Computer Users Group, Gay Crawford, 1601 Kiowa Drive, Olathe, 66062, (913) 764-9413

### KENTUCKY

Hardin County Color Computer Club, Paul Urbahns, 2887 Republic Ave., Radcliff, 40160, (502) 351-4757

### LOUISIANA

The CoCo Sig, Christopher Mayeux, 20 Gibbs Drive, Chalmette, 70043, (504) 277-6880, Modern (504) 277-5135

### MICHIGAN

Color Computer Owners Group, Bernard A. Patton, 388 Eminons Blvd., Wyandotte, 48192, (313) 283-2474

### MISSISSIPPI

Central Mississippi Color Computer Society, Boisy G. Pitre, 6011 E-55 North, Jackson, 39213, (601) 956-9377

### MISSOURI

CoCoNuts User Group, Clyde Lloyd, 2116 N. Columbia, Springfield, 65803, (417) 866-8738

### NEW YORK

Twin Tiers CoCo Club, William Cecchini, 319 Irvine Pl., Elmira, 14901, (607) 734-0065

### NORTH CAROLINA

Raleigh CoCo Club, P.O. Box 10632, Raleigh, 27605, (919) 878-3865

The Tandy Color Computer Users of Charlotte, Eric Stringer, 1022 Noles Dr., Mt. Holly, 28120

### OHIO

The Columbus and Central Ohio Color Computer Club, Richard Heber, 546 Wondside Drive S.W., Pataskala, 43062, (614) 927-3357

Dayton Area Color Computer Users Group, John Teague, 308 Orangewood Drive, Kettering, 45429, (513) 434-9168

The Greater Toledo Color Computer Club, Bill Espen, 1319 North St., Bowling Green, 43402, (419) 471-9444

### PENNSYLVANIA

Johnstown Area Color Computer Users Group, Albert Baldish, 111 C St, Apt #1, Johnstown, 15906, (814) 535-1497

### SOUTH DAKOTA

Empire Area Color Computer Users Group of South Dakota, Carl Holt, P.O. Box 395, Brandon, 57005, (605) 582-3862

### AUSTRALIA

Australian National OS-9 Users Group, Gordon Bentzen, C/- 8 Oilier Street, Sunnybank, Queensland, 4109, (07) 345-5141

Brisbane Southwest Colour Computer Users Group, Bob Devries, 21 Virgo St., Inala, Queensland, 4077, (61)-7-3727816

### CANADA

Club Ordinateur Metro Inc., William Manning, 3020 D'Angonleme, Tracy, Quebec, J3R 3B3, (514) 742-3692

Calgary Colour Computer Club, Gerry McCleary, P.O. Box 22, Station M, Calgary, T1Y 5C4

Le Club D'Ordinateur Couleur du Quebec Inc., 7110 8 e. Ave, St-Michel, Montreal, Quebec, H2A 3C4, (514) 729-8467

Moncton-Dieppe-Riverview CoCo Club, Philippe Lantin, 77 Ninth St., Moncton, New Brunswick, E1E 3E5, (516) 382-7706

# SUNDOG SYSTEMS

## The Quest for THELDA

Better men than you have failed the quest, but the hand of the good princess Thelda is too much to resist! Stolen by the evil necromancer Divnix, she has been sequestered far from prying eyes and it is now up to you to regain the pieces of the mystical Life Force and save the fair lady. The Quest for Thelda is an outstanding arcade program that combines action and adventure to bring you an incredible video game playing experience. Travel throughout over 500 different screens searching for magical objects and spells, fighting horrible creatures, and gathering the various parts of the Life Force guarded by ever-increasing terrors. You'll enjoy the highest quality 320x200 resolution 16 color graphics and digital sound effects that you've come to expect from Sundog Systems. The game play is fast and fun, and only you can rescue the princess and complete the LEGEND OF THELDA! Req. 128K CoCo 3 disk drive, and joystick (2-button joystick supported).

**\$34.95**

Hint book now available for Thelda! Contains clues, maps, and even a BASIC program to modify your own characters! \$4.95

## ZENIX

You have been chosen to pilot the spacecruiser wielding the plutonium plasma laser against the nefarious insectoids, the Zenlans. These bugs have been ripping off the space trade lines for years, now they're about to find a victim who can fight back! Beat back the swarm of pests to their home planet Zenix, and use the laser to end the menace once and for all. Zenix is a lightning fast arcade game for the 128K CoCo 3. The 320x225 16 color graphics are amazing, as are the digital background music score and effects, all on a 128K computer! The fast action and game play will astound you in this GALAGA of extermination. Plug in your joystick and strap in for the ride of your life! Call to order a demo disk to see the action before you buy! Req. 128K CoCo 3, disk drive, and joystick.

**\$29.95**

Visa, Mastercard, Check, Money Order, and COD (USA only, please) accepted. All foreign orders must be sent in US currency Money Orders. Include \$2.50 for shipping in USA and Canada. \$5.00 Foreign. \$3.00 extra for COD orders. PA residents add 6% sales tax. Dealer inquiries welcome. Authors: we're looking for new software!

## ★ THE CONTRAS ★

In the year 2671, a mysterious object landed on Earth, heralding the alien invasion of the Red Falcon. Only two courageous soldiers have a hope of stemming this alien infestation. Armed with your military training and the latest weapon technology, you and a friend must fight back the horde. Sundog Systems presents our second 512K game, *The Contrass*. You'll see why we decided to use 512K on this project! Amazing graphics with 320x225 resolution, 16 color full screen animation and horizontal smooth scrolling! Background digital sound effects and real-time music! One or two player action AT THE SAME TIME! You'll agree that this is one of the best arcade games yet for your 512K CoCo 3. Needless to say, playing here won't be easy; playing *The Contrass* will be tougher! Req. 512K CoCo 3, disk drive, and 2-button joystick.

**\$34.95**

## Crystal City

The superior technology of the evil Overlords has ensnared yet another innocent planet, however, this one contains the Crystal City, bastion of democracy and independence. Earth has had enough! Break through level upon level of their virtually invulnerable defenses, defeat the end guardians, and make your way ever closer to freeing the slaves of the Crystal City! This amazing arcade game is an achievement in its own right. Full 128K/512K utilization! Super fast horizontal hardware scrolling on the 128K computer! Wild digital sound effects and background music score! 30 minutes, or over 30 megabytes, of non-repeating 320x200 resolution, 16 color graphics! This game has it all; order a demo disk to see it first! Can you save the Crystal City from unbeatable foes? Req. 128K CoCo 3, disk drive, and joystick.

**\$34.95**

## Sinistarr KUM-SAI TO BE NINJA

You've raved about this 512K arcade game! The graphics and animation are amazing! You've got to hear the digital sounds! 512K (three disks) packed with excitement. 512K CoCo 3 only. \$34.95.

This martial arts arcade game remains a CoCo 3 phenomenon. One of our best sellers is due! Play the incredible combat experience that you've been missing, and call for the availability of the OS-9 version. 128K CoCo 3 action. \$29.95.

## SOUNDTRAX

This 128K/512K sound sequencing system has become an immensely popular program. Create musical scores using polyphonic digitized sounds and a user-friendly point and click editor. Call to order the SoundTrax demo program, and get 10% off your purchase with receipt. \$34.95.

Now Available: SoundTrax instrument sample disks! Guitars, strings, woodwinds, and just plain weird instruments for your composing pleasure. Completely compatible with the SoundTrax system. 3 floppy (2 sides) disks full of sounds. \$12.95 each or \$29.95 for all three.

## ALSO AVAILABLE:

Hall of the King 1, 2, or 3 CoCo 1 - 3	\$29.95 ea.	Kung-Fu Dude CoCo 1 - 3	\$24.95
Hall of the King Trilogy CoCo 1 - 3	\$74.95		
White Fire of Eternity CoCo 1 - 3	\$19.95		
Dragon Blade CoCo 1 - 3	\$19.95		
Champion CoCo 1 - 3	\$19.95		
Paladin's Legacy CoCo 1 - 3	\$24.95		
Warrior King CoCo 3	\$29.95		
In Quest of the Star Lord CoCo 3	\$34.95		
Hint Sheet	\$ 3.95

# For the first time, a community has banded together to design their next computer.

# A revolutionary new computer, conceived by you. The **MM/1**.

## Power.

The Color Computer™ era began ten years ago with an affordable upgradeable computer with great sound and graphics. The MM/1™ continues that tradition with powerful graphics, crystal clear sound, fantastic multitasking and familiar CoCo-style windows. And it goes far beyond competing computers with unprecedented power, software, and community support.

Excite your eyes with hi-res graphics surpassing the famed Commodore Amiga™. Mix in hot music with a MIDI musical keyboard. Or buy the Extended System to play back digitally-sampled horns, drums — even your own voice! And the MM/1 will never be out of date, because its optional high speed 32-bit bus lets you expand your system to the best new technology.

More colorful than competing Macs, faster than an Amiga, better built than an Atari ST™. The MM/1 is your next computer — designed by you to lead the next color computer revolution.

## Support.

We're pouring our energy into bringing the MM/1 the best of the MS-DOS™ and UNIX software catalogs. Interactive Media Systems, Inc. is launching the MM/1 into the mainstream, so you never need to complain about a lack of popular software again.

Our active developers program (the IMS Developers Association, or IDEA) has been secretly working for months on applications exclusive to the MM/1. These graphics editors, sound sampling programs, and animation utilities bring you unprecedented software power.

Give us a call to get a listing of all the vendors and developers supporting the MM/1. Ask us, too, about the colleges and universities around the United States already using the MM/1 in computer science and multimedia labs, pushing back computing frontiers with the same computer that is now available to you.

## Smart.

If you're thinking of buying an IBM™ PC, Amiga, or Atari ST, think again. Much of your CoCo hardware is useless on these computers. All of your experience is also useless — unless you acquire an MM/1.

The MM/1 uses your RGB-A monitor, drives, joysticks, and lots of other hardware you already own. The MM/1 is easy to use with OS-9/68000™, windows, user guides, and more.

*Personal Computing* recently reported that about one of every four MS-DOS users will abandon it in the next two years in favor of UNIX-style computing. Why? Because they want multitasking windows. The MM/1 has multitasking windows and goes beyond most UNIX computers with its graphics, sound, and ease of use.

And smart computer purchasers want multimedia. *Byte Magazine*, *Amiga magazines*, *Computer Shopper* — even Radio Shack™ sales circulars — tout multimedia and multitasking as the way of the future. Can you find a multitasking, multimedia PC or Mac for less than \$2000? Unlikely.

But you can do it all on the MM/1.

## Free.

For no extra charge, the MM/1 includes software worth over one thousand dollars. OS-9/68000, C compiler, Basic, IBM PC File Manager, tape backup support, a graphics editor, and more. Right out of the box. And enjoy a built-in software library that will give you plenty of power for years to come.

Customer satisfaction is built into the MM/1, too. Call for details on how to get your money back if not satisfied. And service? If ever you run into a problem, get in touch with us by phone, on information services, and on our exclusive customer BBS.

A quality staff backs up the MM/1. The IMS team includes top people from international computer firms as well as folks rooted in the CoCo world, and each person is committed to you.

## Compare.

The MM/1 costs far less than comparably equipped PC compatibles, Amigas, and Atari STs. When you shop for a new computer, use this checklist for comparison.

## For \$779,

you get an MM/1 with...

- slimline case with 200 Watt power supply
- a full one Megabyte of memory
- a high-density floppy drive (1.4 Megabyte capacity)
- graphics resolution up to 720 x 540
- up to 256 colors from a palette of 16 million colors
- a true multitasking operating system — OS-9/68000
- windows, applications, utilities — \$300 value!
- 2 serial ports, for printers, mice, terminals ...
- MIO!-capable for the music hobbyist or professional
- PC keyboard port for XT style detachable keyboard
- Uses CM-8™ or similar monitor
- 15 MHz CPU — runs circles around the Amiga!
- built-in graphics coprocessor
- expandable with optional 32-bit high-speed bus

In other words, if you buy any other computer, you will probably get shortchanged.

## Systems.

- MM/1** Kit (1 Meg single board PCB, with software) 2 serial ports, PC keyboard port, RGB-A port, operating system, applications, Instructions **\$659.**
- MM/1** Personal (above with case, floppy drive, ready to go) **\$779.**
- MM/1** Pro (Personal system, plus keyboard) **\$859.**
- MM/1** Pro Station (Pro with RGB-A monitor) **\$1149.**
- MM/1** Extended (super-enhanced with all software, plus extra serial ports, two parallel ports, stereo sound port, realtime clock, support for mice, joystick; call for details) **\$1125.**

## Extras.

Other hot items from IMS are also available. Just call our toll free number to order what you like.

- MM/1 T-Shirt ("The Revolution Starts With Me")** **\$8.95**
- MM/1 video (interviews, demos)** **\$8.95**
- The Insider newsletter** **\$9.95**

NC residents add appropriate sales tax. Some items require a small postage charge. Call for details.

## Giveaway.

Thousands of people are already lining up to buy the MM/1. But if you'd like an MM/1 of your own, too, read this.

If you come to the Atlanta COCOFEST at the Atlanta Lakewood Holiday Inn, Oct. 6-7, Kenneth Leigh Enterprises and Interactive Media Systems, Inc. will be there in full force, showing off the MM/1, its networking and graphics, its advanced windowing, and digital sound.

And one lucky attendant will win an MM/1. Free. Call COCOPRO! at 313/481-3283 for information on the Atlanta COCOFEST.

### On Display

We recently received the photo (below) of "Over the Rainbow" by Larry Elliot. Larry discovered THE RAINBOW after completing his work of art, and he decided to share his work with us. While the black and white photo (courtesy of Campanile Galleries Inc., Chicago) does little justice to the rainbow depicted in the original 20"-hy-24" oil work, we wanted to pass it along.

language have always been, and must always be, a part of THE RAINBOW. They represent new directions toward which the CoCo and I can grow. Am I a minority of one? I think not, I hope not.

By the way, as I re-read six years of THE RAINBOW searching for answers to my dumb questions about OS-9, I see that the overall balance between "gibberish" and "BASICS" has not changed significantly. Yes, THE RAINBOW has shrunk in stature and I hate that. But it's no more (or less) an OS-9 or machine-language magazine than it was when I first discovered it.

Mr. Price, instead of thumbing through THE RAINBOW in your bookstore looking for "good usable material," try taking it home and reading it. You might accidentally learn something.

John B. Eads  
Sarasota, Florida

### Keeping the Beats

Editor:

I am a Music Education major at University of Wisconsin-Green Bay and find my collection of music (all formats) more difficult to search through for a particular work or artist.

What type of program would make this search faster? For example, type in Bach and get a list of his works or type in Kyrie for a list of various works by that title. Also, where could I purchase such a program?

Jeffrey Hess  
1305 Lawe Street Lower  
Green Bay, WI 54301

You could purchase a generic database and create your own indexed reference. Also, see "Music Catalog" (November 1990, Page 56).

### DTP in ROM?

Editor:

My son gave me a 64K CoCo, one drive, a DMP-106 and a CCR-81 recorder. After much correspondence with Tandy, we were able to secure the Color Scripsit II cartridge. We are wondering now if there is a cartridge similar to the Color Scripsit II that could be used with this keyboard to make large letters for banners and perform Home Publishing duties as well.

When my son had this unit, he received THE RAINBOW and we have copies going several years back. If you can be of any help to us, we would appreciate it.

By the way, what is a Color Computer 3 worth and are they available for purchase?

Lorin Giegerich  
P.O. Box 135  
Prairie du Sac, WI 53578

You can purchase a CoCo 3 from Radio Shack or Computer Plus. The price varies, so you'll have to check the ads. We know of no cartridges with desktop publishing capabilities. After you pick up a CoCo 3, though, check the ads in THE RAINBOW for disk-based software.

THE RAINBOW welcomes letters to the editor. Mail should be addressed to: Letters to Rainbow, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. Letters should include the writer's full name and address. Letters may be edited for purposes of clarity or to conserve space.

Letters to the editor may also be sent to us through our Delphi CoCo SIG. From the CoCo SIG> prompt, type RA1 to take you into the Rainbow Magazine Services area of the SIG. At the RAINBOW> prompt, type LET to reach the LETTERS> prompt and then select Letters for Publication. Be sure to include your complete name and address.

# Novices Niche

## Module Buster

by Jamie L. Cho

*Bust* is an OS-9 utility that breaks down files of merged modules. Just enter `bust("pathname","directory")`. If you don't specify the directory, *Bust* uses the current data directory. The modules are transferred one by one from the specified file to separate files.

*Bust* assumes that `rename`, `attr` and `runb` are available for its use. Load these before using *Bust*. Be careful which modules you breakdown. For example, you cannot bust the shell file that comes with OS-9 since it contains a program named `shell`. To avoid this problem, rename `shell` first. Also make sure you do not breakdown a file that contains modules already present in the directory being used. This results in an error.

*Bust* works by reading the specified file and putting it into separate files. The complex part of this utility is finding each merged program's name and where it ends. Page A-1 of the appendix in the OS-9 Level II manual includes the module format. The size of the module is a 16-bit number contained in bytes \$02 and \$03, following the sync bytes. The most significant digit is located at \$02. The offset to the name string follows the module size. Once this 16-bit number is found, the name of the module is easily found. The end of the name is found when an ASCII character, whose value is greater than 127, is encountered. This value must be ANDed with 127.

### The Listing: Bust.b09

## CoCo Max III

The Famous Graphics Creator  
~~\$79.95~~ now only: **\$39.95**

Save \$100  
**BOTH**  
 CoCo Max III and Max-10 for  
~~\$149.90~~ now only: **\$49.95**

ORDER BY 12/20  
 IN TIME FOR  
 CHRISTMAS

## Christmas Bonus: THE WORKS for an amazing \$79.95

The Works is: CoCo Max III + Max-10 plus ALL the additional fonts at a super low price

### About Max-10

What the CoCo Community needs is a word processor that's rock solid, blindingly fast, feels like a Macintosh, makes all the others look boring, and does not cost \$80. Max-10 is just that and more. It allows on screen mixing of graphics and text, large headlines, multiple columns and full page preview (with graphics). We swear that Max-10 will add excitement to your word processing, and that's no small task!

**PRINTERS SUPPORTED:** EPSON FX, MX, RX, LX AND COMPATIBLES: DMP 105, 106, 130; CGP220 (B&W); OKI 182, 92, 192; STAR NX-10, NX-1000.

### Max-10 Add-ons

- **Max-10 Fonts**, 36 super fonts on 2 disks. Send for list. Order #C-23 ..... ~~\$29.95~~ **\$14.95**  
 NOTE: Max-10 and CoCo Max III fonts aren't interchangeable  
 - **Spell Checker** 35,000 word dictionary for online spell checking and dictionary lookup. Perfect seamless integration with Max-10. Order #C-24 ..... ~~\$29.95~~ **\$14.95**

### System Requirements

Max-10 and CoCo Max III Require: any CoCo 3; 1 or more disk drives; joystick or mouse; Radio Shack HI Resolution joystick interface; a video or RGB monitor or a TV.

### About CoCo Max III

Whether you doodle for fun or design graphics for a living, CoCo Max will amaze you. It's simply that good! Its major features include: Huge picture area (2 full hi-res 320x192 screens). Large editing window, Zoom mode for detail work, 28 point and click drawing tools. Shrink and stretch. Rotation at any angle (1.5° steps). 512K memory support (all features work with 128K too). Undo (Oops) feature to fix mistakes. Animation. Special effects. Color sequencing (8 colors, variable speed), 13 fonts (more available). Each font has 8 sizes and 5 styles for thousands of possible combinations. Translate program to convert most types of pictures. CoCo Show "slide show" program. Miniload program to help use pictures with your software. Color editing of patterns. Prints in single or double size. Select 16 of 64 available colors, all 64 colors are shown at once for easy selection. Pull-down menus. 40 paint brush shapes. Two color lettering. Spray can. Amazing "flowbrush". RGB and composite monitor support. Colors print in 5 shades of gray.

**PRINTERS SUPPORTED:** EPSON RX, FX, MX, LX AND COMPATIBLES: STAR/GEMINI NX-10, NX-1000; DMP100, 105, 106, 110, 120, 130, 200; OKI 82A, 182, 192; CGP-220(B&W)  
 Color Drivers available. See next column.

### CoCo Max III Add-ons

- **Max Fonts** disks, 95 fonts on 4 disks. For those thousand words your picture equals. Now only ..... ~~\$49.95~~ **\$29.95**  
 Or two sets of two disks each ..... ~~\$29.95~~ **\$14.95**  
 - **Max Edit** Don't like our fonts? Make your own or edit existing ones. Creativity literally from scratch. Don't pass this offer up! ..... ~~\$19.95~~ **\$14.95**  
 - **Color Printer** drivers NX-1000 Rainbow, CGP-220 and Okimate 20. Bring your pictures to life with the magic of color. For CoCo Max III only ..... ~~\$19.95~~ **\$14.95**

# Slots & Cards

VGA Graphics Depicted

**microdeal**

576 S. Telegraph  
Pontiac, MI 48053  
(313) 334-5700

Did you ever dream of visiting VEGAS, but you weren't sure what to expect — or if you would be able to afford it? Well, now you can play your favorite slot machine, or sit down at the blackjack table without even leaving the comfort of your home. Browse through different style slot machines (many different Multiplier slots). Visit the change booth if - or is that when? - you run out of cash, without feeling a pain in your wallet. Walk around the corner and sit down at any of a number of different style card games. Enjoy video five card draw poker - where it takes jacks or better to win. Or play Blackjack against the ever treacherous house dealer. Play Hi-Low and wager the max every chance you get. Do you like Keno? If so, choose your numbers, then sit back and wait to see if they are drawn!

All versions display vivid true to VEGAS graphics. Whatever your game, Slots & Cards has it for you! Slots & Cards is available for the IBM PC & Compatibles, Commodore Amiga, Atari ST and the CoCo III.

*See your local dealer for orders and information or call us directly*
